		Operation Table with Trendelenburg type	2	ОВ	OT Table hydraulic major and OT table hydraulic minor	
ME C6.3	Availability of equipment & instruments for diagnostic procedures being undertaken in the facility	Availability of Point of care diagnostic instruments	2	OB	Glucometer, HIV rapid diagnostic kit, USG, ABG machine	
ME C6.4	Availability of equipment and instruments for resuscitation of patients and for providing intensive and critical care to patients	Availability of functional Instruments Resuscitation for new born & Mother	2	OB	Resuscitation bag (Adult & paediatrics) Ambu bag, Oxygen, Suction machine , laryngoscope scope, Defibrillator (Paediatric and adult) , LMA, ET Tube	
		Availability of functional anaesthesia equipment	2	ОВ	Boyles apparatus, Bains Circuit or Soda lime absorbent in close circuit ,AGSS (Anaesthesia gas scavenging system)	
ME C6.5	Availability of Equipment for Storage	Availability of equipment for storage of drugs & Instruments	2	OB	Refrigerator, Crash cart/Drug trolley, instrument trolley, dressing trolley, Instrument cabinet and racks for storage of sterile items	
ME C6.6	Availability of functional equipment and instruments for support services	Availability of equipments for cleaning	2	OB	Three Bucket system for mopping, Separate mops for patient care area and circulation area duster, waste trolley, Deck brush	
		Availability of equipment for TSSU	2	OB	Autoclave Horizontal & Vertical, Steriliser Big & Small	
ME C6.7	Departments have patient furniture and fixtures as per load and service provision	Availability of functional OT light	2	OB	Shadow less Major & Minor, Ceiling and Stand Model, Focus Lamp	
		Availability of Fixtures	2	ОВ	Tray for monitors, Electrical panel for anaesthesia machine with minimum 6 electrical sockets (2= 15 amp power point), panel with outlet for Oxygen and vacuum, X ray view box.	
Standard C7	Facility has a c		ure for effective (utilization, evaluation	on and augmentation of competence and p Check objective checklist has been prepared for	performance of staff
ME C7.1	Criteria for Competence assessment are defined for clinical and Para clinical staff	Check parameters for assessing skills and proficiency of clinical staff has been defined	2	SI/RR	assessing competence of doctors, nurses and paramedical staff based on job description defined for each cadre of staff.	
ME C7.2	Competence assessment of Clinical and Para clinical staff is done on predefined criteria at least once in a year	Check for competence assessment is done at least once in a year	2	SI/RR	Check for records of competence assessment including filled checklist, scoring and grading . Verify with staff for actual competence assessment done	
ME C7.9	The Staff is provided training as per defined core competencies and training plan	Advance Life support	2	SI/RR	ALS and CPR by recognized agency to all category of staff.	
		Training on OT Management	2	SI/RR	OT scheduling, maintenance, Fumigation, Surveillance, equipment-operation and maintenance, infection control, surgical procedures and emergency protocols.	
		Biomedical Waste Management& Infection control and hand hygiene Patient safety	2	SI/RR	To all category of staff. At the time of induction and once in a year.	
		Training on Quality Management	2	SI/RR	Assessment, action planning, PDCA, 5S & use of checklist	
Standard D1		The facility has astablished D		oncern - D Suppor	t Services d maintenance and calibration of Equipme	ent.
Standard D1	The facility has established system for	All equipment are covered under AMC			look for MOU and visit records of the empanelled	
ME D1.1	maintenance of critical Equipment	including preventive maintenance There is system of timely corrective	2	SI/RR	agency. Back up for critical equipment. Label Defective/Out	
		break down maintenance of the equipment	2	SI/RR	of order equipment and stored appropriately until it has been repaired	

		Staff is skilled for cleaning, inspection & trouble shooting in case equipment	2	SI/RR	E.g. when to change water of batteries, when to oil, change fuse, replace filters etc.
ME D1.2	The facility has established procedure for internal and external calibration of measuring Equipment	malfunction All the measuring equipment/ instrument are calibrated	2	OB/ RR	Boyles apparatus, cautery, BP apparatus, autoclave etc. There is system to label/ code the equipment to indicate status of calibration / verification when recalibration is due to de up to the calibration is due to de up to the calibration is due.
ME D1.3	Operating and maintenance instructions are available with the users of equipment	Up to date instructions for operation and maintenance of equipment are readily available with staff.	2	OB/SI	If operator doesn't understand English, then instructions should be in local language.
Standard D2		ity has defined procedures for	storage, inventor	y management and	dispensing of drugs in pharmacy and patient care areas
ME D2.1	There is established procedure for forecasting and indenting drugs and consumables	There is established system of timely indenting of consumables and drugs	2	SI/RR	Stock level are daily updated Requisition are timely placed
ME D2.3	The facility ensures proper storage of drugs and consumables	Drugs are stored in containers/tray/crash cart are labelled	2	OB	Away from direct sunlight and temperature is maintained as per instructions of manufacturer.
		Empty and filled cylinders are labelled & kept separately	2	ОВ	Each cylinder is provided with a checklist & flow meter and key for opening the cylinder
ME D2.4	The facility ensures management of expiry and near expiry drugs	Expiry dates' are maintained at emergency drug tray	2	OB/RR	Records for expiry and near expiry drugs are maintained for drug stored at department. No expired drugs found
ME D2.5	The facility has established procedure for inventory management techniques	There is practice of calculating and maintaining buffer stock	2	SI/RR	At least one week of minimum buffer stock is maintained all the time in the labour room. Minimum stock and reorder level are calculated based on consumption in a week accordingly
		Department maintained stock and expenditure register of drugs and consumables	2	RR/SI	Check that records are regularly updated
ME D2.6	There is a procedure for periodically replenishing the drugs in patient care areas	There is procedure for replenishing drug tray /crash cart	2	SI/RR	There is no stock out of drugs
ME D2.7	There is process for storage of vaccines and other drugs, requiring controlled temperature	Temperature of refrigerators are kept as per storage requirement and records are maintained	2	OB/RR	Check for temperature charts are maintained and updated periodically
ME D2.8	There is a procedure for secure storage of narcotic and psychotropic drugs	Narcotic ,psychotropic & Anaesthetic agents are kept in lock and key	2	OB/SI	Under direct supervision of anaesthetist
Standard D3		The facility provides	safe, secure and	comfortable enviro	nment to staff, patients and visitors.
ME D3.1	The facility provides adequate illumination level at patient care areas	Adequate Illumination at OT table	2	OB	100000 lux
ME D3.2	visitors in patient areas	Warning light outside the OT is switched on when OT is functional	2	OB/SI	Only persons required in OT are allowed to enter the OT
ME D3.3	The facility ensures safe and comfortable environment for patients and service providers	Temperature & humidity is maintained and record of same is kept	2	SI/RR	20-25°C, (CU has functional room thermometer and temperature is regularly maintained. 50-60% humidity
ME D3.4	The facility has security system in place at patient care areas	Security arrangement at OT	2	ОВ	Restricted Signage, security guard, CCTV camera
Standard D4			established Prog	gramme for mainten	nance and upkeep of the facility
ME D4.1	Exterior of the facility building is maintained appropriately	Department is painted/whitewashed in uniform colour &plastered & painted Floors, walls, roof, roof tops, sinks	2	ОВ	Painted in soothing colours Not bright colours.
ME D4.2		patient care and circulation areas are Clean Surface of furniture and fixtures are	2	ОВ	All area are clean with no dirt,grease,littering and cobwebs Look for dirt above OT light, behind stationary
	Hospital infrastructure is adequately	clean Check for there is no seepage , Cracks,	2	OB	equipment etc.
ME D4.3	maintained	chipping of plaster	2	OB	check corners, false ceiling.
		OT Table are intact and without rust	2	OB	Mattresses are intact and clean
		No unnecessary items in sterile zone	2		No slabs, almirah, storing unnecessary items like drums, equipment, Instruments etc Items not required for immediate procedures are kept out of sterile zone
ME D4.5	The facility has policy of removal of condemned junk material	No condemned/Junk material in the OT	2	ОВ	No partial compliance.
ME D4.6	The facility has established procedures for pest, rodent and animal control	No stray animal/rodent/birds	2	ОВ	Check for no stray animal in and around OT. Also no lizard, cockroach, mosquito, flies, rats etc.
Standard D5	Ti	he facility ensures 24X7 water a	and power backu	<mark>p as per requiremer</mark>	nt of service delivery, and support services norms
ME D5.1	The facility has adequate arrangement storage and supply for portable water in all functional areas	Availability of 24x7 running and potable water	2	OB/SI	Availability of Hot water supply

					1	
		Anaesthesia Safety Checklist is used for safe administration of anaesthesia	2	RR	Check use of WHO Anaesthesia Safety Checklist	
		Anaesthesia equipment are checked before induction	2	RR	Sufficient reserve of gases. Vaporizers are connected, Laryngoscope, ET tube and suction App	
		Food intake status of Patient is	2	RR/SI	are ready and clean Time of last food intake is mentioned	
		checked Patients vitals are recorded during	2	RR	Heart rate , cardiac rate , BP, O2 Saturation,	
		anaesthesia	2	KK	temperature, Respiration rate.	
		Airway security is ensured	2	RR/SI	Breathing system of anaesthesia equipment that delivers gas to the patient is securely and correctly assembled and breathing circuits are clean	
		Potency and level of anaesthesia is monitored	2	RR/SI	Recorded in the Anaesthesia Record Form.	
		Anaesthesia note is recorded	2	RR	Check for the adequacy, signed, complete, and post anaesthesia instructions.	
		Any adverse Anaesthesia Event is recorded and reported	2	RR	Reduced level of consciousness, reparatory depression, malignant hyperpyrexia, bone marrow depression, life threatening pressure effect,	
ME E14.3	Facility has established procedures for	Post anaesthesia status is monitored	2	RR/SI	anaphylaxis Check for anaesthetic notes & post operating	
Standard E15	Post Anaesthesia care	and documented Facility	has defined and	established procedu	instructions in post operative room & area ures of Surgical Services	
ME E15.1	Facility has established procedures OT	List of Elective Surgeries for the day is	2	RR/SI	Surgery list is prepared in consonance with availability of the OT hours and patients	
	Scheduling	prepared and displayed outside OT.			requirement. Day, date and time of surgeries.	
		Surgery list is complete in all respect	2	OB/SI	Clear dear unit of Sugeries. Name, Age, Gender of patients. Clear description of the procedure (name of procedure which side,) Name of the surgeon & anaesthetist. Major or minor case.	
		Operation list is sent to OT well in advance	2	RR/SI	By 12:00 hours, a day before the surgery.	
		Surgery list is informed to surgeon and ward sister.	2	RR/SI	Verify the surgery register/email	
		The operation list does not exceed the	2	RR/SI	This does not refer to the time during an operation	
ME E15.2	Facility has established procedures for	time allocated to it. Patient evaluation before surgery is	2	RR/SI	of an individual patient Vitals , Patients fasting status etc.	
	Preoperative care	done and recorded Antibiotic Prophylaxis and Tetanus	2			
		given as indicated Surgeries planned under local	2	RR/SI	As per instructions of surgeon/anaesthetist.	
		anaesthesia/Regional Block sensitivity test is done	2	RR/SI	lidocaine sensitivity test	
		There is a process to prevent wrong site and wrong surgery	2	RR/SI	Surgical Site is marked before entering into OT	
		No shaving of the surgical site	2	SI/RR	Only clipping on the day of surgery in OT is done	
		Skin preparation before surgery is	2	SI/RR	Bathing with soap and water prior to surgery in	
		done.	2	3i/NK	ward.	
		Skin preparation is done as per protocol	2	RR/SI	Prepare the skin with antiseptic solution (Chlorhexidine gluconate and iodine), starting in the centre and moving out to the periphery. This area should be large enough to include the entire incision and an adjacent working area.	
		Draping is done as per protocol	2	SI/OB	Scrub, gown and glove before covering the patient with sterile drapes. Leave uncovered only the operative field and those areas necessary for the maintenance of anaesthesia.	
ME E15.3	Facility has established procedures for Surgical Safety	Surgical Safety Check List is used for each surgery	2	RR/SI	Check for Surgical safety check list has been used for surgical procedures	
		Sponge and Instrument Count Practice is implemented	2	RR/SI	Instrument, needles and sponges are counted before beginning of case, before final closure and on completing of procedure & documented	
		Adequate Haemostasis is secured	2	RR/SI	Check for functional Cautery, use of artery forceps and suture ligation techniques	
		during surgery Appropriate suture material is used for surgery as per requirement	2	RR/SI	For dosing abdomial wall or ligating blood vessel use non-absorbable sutures (braided suture, nylon, polyester etc). absorbable sutures in urinary tract. Braided Biological sutures are not used for dirty wounds, Catgut is not used for closing fascial layers of abdominal wounds or where prolonged support is required	
		Check for suturing techniques are applied as per protocol	2	RR/SI	Braided sutures for interrupted stiches. Absorbable and non-absorbable monofilament sutures for continuous stiches.	
ME E15.4	Facility has established procedures for Post operative care	Post operative monitoring is done before discharging to ward	2	RR/SI	Check for post operative operation room /area is used and patients are not immediately shifted to wards after surgery	
		Post operative notes and orders are recorded	2	RR/SI	Post operative notes contains Vital signs, Pain control, Rate and type of IV fluids, Urine and Gastrointestinal fluid output, other medications and Laboratory investigations	
		Information & instructions are given to nursing staff before shifting the patient to the ward from the OT	2	RR/SI	Instructions given by surgeon and anaesthetist.	
Standard E16			tablished proced	ures for the manage	ement of death & bodies of deceased pati	ents
	The facility has standard procedures for				Includes both maternal and neonatal death. Death	
ME E16.2 Standard E18	handling the death in the hospital	Death note including efforts done for resuscitation is noted in patient record	2 as established nr	RR Ocedures for Intrana	summary is given to patient attendant quoting the immediate cause and underlying cause if possible atal care as per guidelines	
	Facility staff adheres to standard procedures	Wipes the baby with a clean pre-			Check staff competence through demonstration or	
ME 18.3	for routine care of new-born immediately after birth	warmed towel and wraps baby in second pre-warmed towel;	2	SI/OB	case observation	
		Performs delayed cord clamping and cutting (1-3 min);	2	SI/OB	Check staff competence through demonstration or case observation	
		Initiates breast-feeding soon after birth	2	SI/OB	Check staff competence through demonstration or case observation	
		Records birth weight and gives	2	SI/OB	Check staff competence through demonstration or	
ME E18.4	There is an established procedure for assisted and C-section deliveries per scope of services.	injection vitamin K Pre operative care and part preparation	2	SI/RR	case observation Check for Haemoglobin level is estimated , and arrangement of Blood, Catheterization, Administration of Antacids Proper cleaning of perineal area before procedure with antisepsis	
		Proper selection Anaesthesia technique	2	SI/RR	Check Both General and Spinal Anaesthesia Options are available. Ask for what are the criteria for using spinal and GA. Regional block and epidural anaesthesia used wherever required/indicated	
			1	1		I .

		Intraoperative care	2	SI/RR	Check for measures taken to prevent Supine Hypotension (Use of pillow/Sandbag to tilt the uterus), Technique for Incision, Opening of Uterus, Delivery of Foetus and placenta, and closing of Uterine Incision	
		Post operative care	2	SI/RR	Frequent monitoring of vitals, Strict IO charting, Flat bed without pillow for SA, NPO depending on type of anaesthesia and surgery.	
ME 18.5	Facility staff adheres to standard protocols for identification and management of Pre Eclampsia / Eclampsia	Management of PIH/Eclampsia	2	SI/RR	Ask for how to secure airway and breathing, Loading and Maintenance dose of Magnesium sulphate , Administration of anti Hypertensive Drugs	
ME 18.6	Facility staff adheres to standard protocols for identification and management of PPH.	Postpartum Haemorrhage	2	SI/RR	IV fluids, parental oxytocin and antibiotics, manual removal of placenta, blood transfusion, B-lynch suturing, surgery	
		Ruptured Uterus	2	SI/RR	Put patient in left lateral position, maintain Airway, breathing and circulation, IV Fluid, antibiotics, urgent laparotomy and hysterectomy.	
ME 18.7	Facility staff adheres to standard protocols for Management of HIV in Pregnant Woman & Newborn	Provides ART for seropositive mothers/ links with ART centre	2	SI/RR	Check case records and Interview of staff	
		Provides syrup Nevirapine to new- borns of HIV seropositive mothers	2	SI/RR	Check case records and Interview of staff	
ME 18.10	There is Established protocol for new-born resuscitation is followed at the facility.	New born Resuscitation	2	SI/RR	Ask Nursing staff to demonstrate Resuscitation Technique	
Standard E19		Facility h	as established pr	ocedures for postna	atal care as per guidelines	
ME E19.1	Facility staff adheres to protocol for assessment of condition of mother and baby and providing adequate postpartum care	Prevention of Hypothermia	2	SI/RR	Skin contact, Kangaroo mother care, radiant warmer, warm clothes.	
ME E19.2	Facility staff adheres to protocol for counselling on danger signs, post-partum family planning and exclusive breast feeding	Initiation of Breastfeeding with in 1 Hour	2	PI/SI	Shall be initiated as early as possible and exclusive breast feeding	
ME E19.5	The facility ensure adequate stay of mother and new born in a safe environment as per standard protocols	There is established criteria for shifting new born to SNCU	2	SI/RR	only the new born requiring intensive care should be transferred to SNCU	
Standard F1	Facility	y has infection control program		oncern - F Infection	on Control <mark>cion and measurement of hospital associat</mark>	ed infection
ME F1.2	Facility has provision for Passive and active culture surveillance of critical & high risk areas	Surface and environment samples are taken for microbiological surveillance	2	SI/RR	Swab are taken from infection prone surfaces	
ME F1.3	Facility measures hospital associated infection rates	There is procedure to report cases of Hospital acquired infection	2	SI/RR	Patients are observed for any sign and symptoms of HAI like fever, purulent discharge from surgical site .	
ME F1.4	There is Provision of Periodic Medical Check-ups and immunization of staff Facility has established procedures for	There is procedure for immunization medical check-up of the staff	2	SI/RR	Hepatitis B, Tetanus Toxoid etc	
ME F1.5	regular monitoring of infection control practices Facility has defined and established	Regular monitoring of infection control practices Check for Doctors are aware of	2	SI/RR	Hand washing and infection control audits done at periodic intervals Antibiotics prescribed are in line with Antibiotic

		Training on Quality Management System	2	SI/RR	To all category of staff. At the time of	
		Training on quanty wanagement system		39100	induction and once in a year.	
ME C7.10	There is established procedure for utilization of skills gained thought trainings by on -job supportive supervision	Staff is skilled to operate ICU equipments	2	SI/RR	Check supervisors make periodic rounds of department and monitor that staff is working according to the training imparted. Also staff is provided on job training wherever there is still gaps	
		Staff is skilled for resuscitation and intubation	2	SI/RR	Check supervisors make periodic rounds of department and monitor that staff is working according to the training imparted. Also staff is provided on job training wherever there is still gaps	
		Nursing staff is skilled identifying and managing complication	2	SI/RR	Check supervisors make periodic rounds of department and monitor that staff is working according to the training imparted. Also staff is provided on job training wherever there is still gaps	
		Nursing Staff is skilled for maintaining clinical records	2	SI/RR	Check supervisors make periodic rounds of department and monitor that staff is working according to the training imparted. Also staff is provided on job training wherever there is still gaps	
Standard D1		The facility has established Program	Area of Concern - D		nce and calibration of Equipment.	
ME D1.1	The facility has established system for maintenance	All equipments are covered under AMC including	2	SI/RR	Check with AMC records/ Warranty documents	
	of critical Equipment	preventive maintenance		39100	Staff is aware of the list of equipment covered under AMC. (1) Check log book is maintained & it shows time taken to repair equipment.	
		There is system of timely corrective break down maintenance of the equipments	2	SI/RR	(2) Backup of critical equipment such as Ventilator, Infusion pump, C-PAP,etc. is available (3) Check staff is aware of Contact details of the agencies/ person responsible for maintenance	
		There has system to label Defective/Out of order equipments and stored appropriately until it has been repaired Staff is skilled for trouble shooting in case equipment	2	OB/RR		
		malfunction Periodic cleaning, inspection and maintenance of the	2	SI/RR		
	The facility has established procedure for internal	equipments is done by the operator All the measuring equipments/ instrument are	2	SI/RR		
ME D1.2	and external calibration of measuring Equipment	There is system to label/ code the equipment to indicate status of calibrated	2	OB/ RR		
ME D1.3	Operating and maintenance instructions are available with the users of equipment	recalibration is due Up to date instructions for operation and maintenance of equipments are readily available with staff.	2	OB/SI	Check the down time of equipments	
Standard D2	There is established procedure for forecasting and	he facility has defined procedures for storage There is established system of timely indenting of			Stock level are daily updated	care areas
ME D2.1	indenting drugs and consumables	consumables and drugs at nursing station	2	SI/RR	Indents are timely placed Away from direct sunlight and	
ME D2.3	The facility ensures proper storage of drugs and consumables	Drugs are stored in containers/tray/crash cart and are labelled Empty and filled cylinders are labelled	2	OB OB	temperature is maintained as per instructions of manufacturer.	
ME D2.4	The facility ensures management of expiry and near expiry drugs	Expiry dates' are maintained at emergency drug tray	2	OB/RR	Records for expiry and near expiry drugs are maintained for emergency tray FIRST EXPIRY and FIRST OUT (FEFO) is in practice	
		No expired drug found Records for expiry and near expiry drugs are maintained for drug stored in ICU	2	OB/RR RR	Check the drug expiry of drug sub store Check the record of expiry and near expiry drug	
ME D2.5	The facility has established procedure for inventory management techniques	There is practice of calculating and maintaining buffer stock	2	SI/RR	Minimum stock and reorder level are calculated based on consumption Minimum buffer stock is maintained all the time	
		Department maintained stock register of drugs and consumables	2	RR/SI	Check record of drug received, issued and balance stock in hand and are regularly updated	
ME D2.6	There is a procedure for periodically replenishing the	Drugs are categorized in Vital, Essential and Desirable There is established system for replenishing drug tray	2	OB/RR SI/RR	Check all Vital drugs are available	
	drugs in patient care areas	/crash cart There is no stock out of drugs	2	OB/SI	Check stock of some vital drugs	
ME D2.7	There is process for storage of vaccines and other drugs, requiring controlled temperature	Temperature of refrigerators are kept as per storage requirement and records twice a day and are maintained	2	OB/RR	Check for temperature charts are maintained and updated twice a daily.	
ME D2.8	There is a procedure for secure storage of narcotic	Narcotic ,psychotropic drugs are kept separately in lock and key	2	OB/SI	Separately kept, away from other drugs and labelled	
Standard D3	and psychotropic drugs	The facility provides safe, s	ecure and comfortab	le environment to st		
ME D3.1	The facility provides adequate illumination level at patient care areas	Adequate Illumination at nursing station	2	ОВ	General Patient Care - 200-50 Lux Procedure Spot Light - 1500 Lux	
ME D3.2	The facility has provision of restriction of visitors in patient areas	Adequate illumination in patient care unit Entry to ICU is restricted	2	OB OB		
ME D3.3	The facility ensures safe and comfortable environment for patients and service providers	Visiting hour are fixed and practiced Temperature is maintained in ICU and record of same is kept	2	OB/PI SI/RR	20-25OC, ICU has functional room thermometer and temperature is regularly maintained	
		Humidity is maintained in ICU and record of same is maintained	2	SI/RR	50-60%	
		ICU has system to maintain its ventilation and its environment is dust free	2	SI/RR		
		ICU has system to control the sound producing activities and gadgets' (like telephone sounds, staff area and equipments)	2	SI/RR		
ME D3.4	The facility has security system in place at patient care areas	Security arrangement at ICU	2	ОВ	Check mechanism at place to track the	
ME D3.5	The facility has established measure for safety and	Identification band for all Female staff feel secure at work place	2	OB SI	patient based on UID	
Standard D4	security of female staff	The facility has establ			pkeep of the facility	
ME D4.1	Exterior of the facility building is maintained appropriately	Building is painted/whitewashed in uniform color	2	ОВ	·	
		Interior of patient care areas are plastered & painted	2	ОВ		
ME D4.2	Patient care areas are clean and hygienic	Floors, walls, roof, roof topes, sinks patient care and circulation areas are Clean	2	OB	All area are clean with no dirt,grease,littering and cobwebs	
		Surface of furniture and fixtures are clean Toilets are clean with functional flush and running	2	OB OB		
ME D4.3	Hospital infrastructure is adequately maintained	water Check for there is no seepage , Cracks, chipping of plaster	2	ОВ		
		Window panes , doors and other fixtures are intact	2	ОВ		
ME D4.5	The facility has policy of removal of condemned junk	Patients beds are intact and painted No condemned/Junk material in the ICU	2	OB OB	Mattresses are intact and clean	
ME D4.6	material The facility has established procedures for pest,	No rodent/pests are noticed	2	OB		
	rodent and animal control					

		The feeliles are 24V7 water and are			dellares and assessed and dellares	
Standard D5	The facility has a decreased and a second	The facility ensures 24X7 water and por	wer backup as per re	quirement of service	delivery, and support services no	ms
ME D5.1	The facility has adequate arrangement storage and supply for portable water in all functional areas	Availability of 24x7 running and potable water	2	OB/SI		
ME D5.2	The facility ensures adequate power backup in all	Availability of power back up in ICU	2	OB/SI	Power back for all critical equipments	
	patient care areas as per load	Availability of UPS	2	OB/SI		
ME DS.3	Critical areas of the facility ensures availability of oxygen,	Availability of Emergency light Availability of Centralized /local piped Oxygen and	2	OB/SI OB		
StandardD6	medical gases and vacuum supply	vacuum supply Dietary services are available			requirement of the patients.	
ME D6.1	The facility has provision of nutritional assessment	Nutritional assessment of patient done as required and	2	RR/SI		
ME D6.2	of the patients The facility provides diets according to nutritional	directed by doctor Check for the adequacy and frequency of diet as per	2	OB/RR	Check that all items are as per clinical	
ME DOLE	requirements of the patients	nutritional requirement		PI/SI	advice Ask patient/staff weather they are	
	Hospital has standard procedures for preparation,	Check for the Quality of diet provided in ICU	2	PI/SI	satisfied with the Quality of food	
ME D6.3	handling, storage and distribution of diets, as per requirement of patients	There is procedure of requisition of different type of diet from ward to kitchen	2	RR/SI		
Standard D7			facility ensures clea		its	
ME D7.1	The facility has adequate sets of linen	Clean Linens are provided for all occupied bed Gown is provided to all patients	2	OB/RR OB/RR		
ME D7.2	The facility has established procedures for changing of linen in patient care areas	Linen is changed every day and whenever it get soiled	2	OB/RR		
ME D7.3	The facility has standard procedures for handling , collection, transportation and washing of linen	There is system to check the cleanliness and Quantity of the linen received from laundry	2	SI/RR		
		·			Check linen is kept closed bin & emptied	
		Check dedicated closed bin is kept for storage of dirty linen	2	ОВ	regularly. Plastic bag is used in dustbin & these bags are sealed before removed &	
					handed over	
Standard D11	Rol The facility has established job description as per	es & Responsibilities of administrative and cl Job description is defined and communicated to all				procedures.
ME D11.1	govt guidelines	concerned staff Staff is aware of their role and responsibilities	2	RR SI	Regular + contractual	
	The facility has a salelished according for disk.		-	-	Check for system for recording time of	
ME D11.2	The facility has a established procedure for duty roster and deputation to different departments	There is procedure to ensure that staff is available on duty as per duty roster	2	RR/SI	reporting and relieving (Attendance register/ Biometrics etc)	
		There is designated in charge for department	2	SI		
ME D11.3	The facility ensures the adherence to dress code as mandated by its administration / the health	Doctor, nursing staff and support staff adhere to their	2	ОВ		
Standard D12	department	respective dress code Facility has established procedure for more			s and adheres to contractual chill-	ations
Standard D12		racinty has established procedure for mol	morning the quanty o	outsourced service	Verification of outsourced services	autoris .
ME D12.1	There is established system for contract management for out sourced services	There is procedure to monitor the quality and adequacy of outsourced services on regular basis	2	SI/RR	(cleaning/ Dietary/Laundry/Security/Maintenance)	
	our sourced services	auequacy or outsourced services on regular basis			provided are done by designated in- house staff

		management ICU has documented procedure for entry of visitor in	2	RR		
ME G4.3	Staff is trained and aware of the standard	ICU Check staff is a aware of relevant part of SOPs	2	SI/RR		
Standard G 5	procedures written in SOPs	Facility maps its key processes and seeks t			non value adding activities and wa	 stages
ME G5.1	Facility maps its critical processes	Process mapping of critical processes done	2	SI/RR	and a services alla we	
ME G5.2	Facility identifies non value adding activities / waste / redundant activities	Non value adding activities are identified	2	SI/RR		
ME G5.3	Facility takes corrective action to improve the processes	Processes are rearranged as per requirement	2	SI/RR		
Standard G6 ME G6.3	Facility has defined Quality policy, which is in congruency with the mission of facility	The facility has defined mission, val	ues, Quality policy &	objectives & prepare	ed a strategic plan to achieve them Check quality policy of the facility has been defined in consultation with hospital staff and duly approved by the head of the facility. Also check Quality Policy enables achievement of mission of the facility and health department	
ME G6.4	Facility has de defined quality objectives to achieve mission and quality policy	Check If SMART Quality Objectives have framed	2	SI/RR	Check short term valid quality objectivities have been framed addressing key quality issues in each department and cores services. Check if these objectives are Specific, Measurable, Attainable, Relevant and Time Bound.	
ME G6.5	Mission, Values, Quality policy and objectives are effectively communicated to staff and users of services	Check of staff is aware of Mission , Values, Quality Policy and objectives	2	SI/RR	Interview with staff for their awareness. Check if Mission Statement, Core Values and Quality Policy is displayed prominently in local language at Key Points	
ME G6.6	Facility prepares strategic plan to achieve mission, quality policy and objectives	Check if plan for implementing quality policy and objectives have prepared	2	SI/RR	Verify with records that a time bound action plan has been prepared to achieve quality policy and objectives in consultation with hospital staff. Check if the plan has been approved by the hospital management	
ME G6.7	Facility periodically reviews the progress of strategic plan towards mission, policy and objectives	Check time bound action plan is being reviewed at regular time interval	2	SI/RR	Review the records that action plan on quality objectives being reviewed at least once in month by departmental in charges and during the quality team meeting. The progress on quality objectives have been recorded in Action Plan tracking sheet	
Standard G7		Facility seeks contin	nually improvement b	y practicing Quality	method and tools.	
ME G7.1	Facility uses method for quality improvement in services	Basic quality improvement method	2	SI/OB	PDCA & 5S	
		Advance quality improvement method	2	SI/OB	Six sigma, lean.	

					Minimum 2 applicable tools are used in	
ME G7.2 Standard G9	Facility uses tools for quality improvement in services	7 basic tools of Quality Facility has established procedures for	or assessing, reporting, e	SI/RR valuating and managin	each department	
ME G9.6	Periodic assessment for Medication and Patient care safety risks is done as per defined criteria.	Check periodic assessment of medication and patient care safety risk is done using defined checklist periodically	2	SI/RR	Verify with the records. A comprehensive risk assessment of all clinical processes should be done using pre define criteria at least once in three month.	
ME G9.7	Periodic assessment for potential risk regarding safety and security of staff including violence against service providers is done as per defined criteria	SaQushal assessment toolkit is used for safety audits.	2	SI/RR	Check that the filled checklist and action taken report are available Staff is aware of key gaps & closure	
ME G9.8	Risks identified are analysed evaluated and rated for severity	Identified risks are analysed for severity	2	SI/RR	Action is taken to mitigate the risks	
Standards G10	Seventy	The facility has established clinical	Governance framework	to improve quality and	d safety of clinical care processes	
ME G10.3	Clinical care assessment criteria have been defined and communicated	The facility has established procedures to review the clinical care processes	2	SI/RR	Check parameter are defined & implemented to review the clinical care i.e. through Ward round, peer review, morbidity & mortality review, patient feedback, clinical audit & clinical outcomes.	
		Check regular ward rounds are taken to review case progress	2	SI/RR	(1) Both critical and stable patients (2) Check the case progress is documented in BHT/ progress notes-	
		Check the patient /family participate in the care evaluation	2	SI/RR	Feedback is taken from patient/family on health status of individual under treatment	
		Check the care planning and co- ordination is reviewed	2	SI/RR	System in place to review internal referral process, review clinical handover information, review patient understanding about their progress	
ME G10.4	Facility conducts the periodic clinical audits including prescription, medical and death audits	There is procedure to conduct medical audits	2	SI/RR	Check medical audit records (a) Completion of the medical records i.e. Medical history, assessments, re assessment, investigations conducted, porgress notes, interventions conducted, outcome of the case, patient education, delineation of responsibilities, discontinued to the case, patient education, delineation of responsibilities, discontinued to the case of the	
		There is procedure to conduct death audits	2	SI/RR	[1) All the deaths are audited by the committee. (2) The reasons of the death is clearly mentioned (3) Data pertaining to deaths are collated and trend analysis is done (4) A through action taken report is prepared and presented in clinical Governance Board meetings / during grand round (bwterever required)	
		There is procedure to conduct referral audits	2	SI/RR	Check for -valid sample size, data is analysed, poor performing attributes are identified and improvement initiatives are undertaken	
		All non compliance are enumerated & recorded for medical audits	2	SI/RR	Check the non compliances are presented & discussed during clinical Governance meetings	
		All non compliance are enumerated & recorded for newborn death audits	2	SI/RR	Check the non compliances are presented & discussed during clinical Governance meetings	
		All non compliance are enumerated & recorded for referral audits	2	SI/RR	Check the non compliances are presented & discussed during clinical Governance meetings	
ME G10.5	Clinical care audits data is analysed, and actions are taken to close the gaps identified during the audit process	Check action plans are prepared and implemented as per medical audit record findings	2	SI/RR	Randomly check the actual compliance with the actions taken reports of last 3 months	
		Check action plans are prepared and implemented as per death audit record's findings	2	SI/RR	Randomly check the actual compliance with the actions taken reports of last 3	
		Check action plans are prepared and implemented as per prescription audit record findings	2	SI/RR	months Randomly check the actual compliance with the actions taken reports of last 3 months	
		Check the data of audit findings are collated	2	SI/RR	Check collected data is analysed & areas for improvement is identified & prioritised	
		Check PDCA or revalent quality method is used to address critical problems	2	SI/RR	Check the critical problems are regularly monitored & applicable solutions are duplicated in other departments (wherever required) for process improvement	
ME G10.7	Facility ensures easy access and use of standard treatment guidelines & implementation tools at point of care	Check standard treatment guidelines / protocols are available & followed.	2	SI/RR	Staff is aware of Standard treatment protocols/ guidelines/best practices	
		Check treatment plan is prepared as per Standard treatment guidelines	2	SI/RR	Check staff adhere to clinical protocols while preparing the	
		Check the drugs are prescribed as per Standards treatment guidelines	2	SI/RR	treatment plan Check the drugs prescribed are available in EML or part of drug formulary	
		Check the updated/latest evidence are available	2	SI/RR	Check when the STG/protocols/evidences used in healthcare facility are published. Whether the STG protocols are according to current evidences.	
		Check the mapping of existing clinical practices processes is done	2	SI/RR	The gaps in clinical practices are identified & action are taken to improve it. Look for evidences for improvement in clinical practices using PDCA

Standard A1				Provides Curative Ser		
ME A1.14	Services are available for the time period as mandated	All radiology services are available in routine working hours	2	SI/RR		
		Emergency radiology services are available for selected procedure 24X7	2	SI/RR	Check for: 1. Radiological services are available at night 2. Look for number of radiology test performed at night	
Standard A2			Facility p	rovides RMNCHA Se	rvices	
ME A2.2	The facility provides Maternal health Services	Availability of USG services for Pregnant women	2	SI/OB		
Standard A3			Facility P	rovides diagnostic Se	ervices	
ME A3.1	The facility provides Radiology Services	Availability of X ray services	2	SI/OB	for chest, bones, skull, spine and abdomen.	
		Availability of special radio graph services	2	SI/OB	Barium Swallow, Barium enema, Barium meal, MMR (Miniature mass radiography) Chest, IVP, Mammography, C-arm	
		Availability of Dental X ray Services	2	SI/OB	Radio-vision-Graph (RVG) Digital dental X-ray, OPG services	
		Availability of ultrasound services	2	SI/OB	Pre natal diagnostic procedure: Ultrasonography with colour doppler, Fetoscopy	
		Availability of CT scan facility	2	SI/OB		
				oncern - B Patient		
Standard B1			n to care seekers, atte	ndants & community	about the available services and their mod	alities
ME B1.1	The facility has uniform and user-friendly signage system	Availability of departmental & directional signages	2	ОВ	Numbering, main department and internal sectional signage are displayed	
		Display of PNDT Notice at USG	2	ОВ	Notice in local language is displayed at entrance of USG department that All persons including the employer, employee or any other person associated with department shall not conduct or associate with or help in carrying out detection or disclosure of sex of foetus in any manner	
		Display of cautionary signage outside the X ray department	2	ОВ	Radiation hazard sign and caution for pregnant women and children	
ME B1.2	The facility displays the services and entitlements available in its departments	List of services available are displayed at the entrance	2	ОВ		
		Timing for taking X ray and collection of reports are displayed outside the X ray department	2	ОВ		
ME B1.4					DELETED	
ME B1.6	Information is available in local language and easy to understand	Signage's and information are available in local language	2	ОВ		
ME B1.8	The facility ensures access to clinical records of patients to entitled personnel	Reports are provided to Patient in proper printed format	2	ОВ		
Standard B2	Services are deliv	ered in a manner that is sensitive to ge	nder, religious and cult	tural needs, and ther	re are no barrier on account of physical econo	omic, cultural or social reasons
ME B2.1	Services are provided in manner that are sensitive to gender	Female attendant should accompany female patients during radiological procedures	2	OB/SI		
ME B2.3	Access to facility is provided without any physical barrier & and friendly to people with disabilities	Check the availability of ramp in OPD/ X ray room	2	ОВ	At least 120 cm width, gradient not steeper than 1:12, if ramp is available	
Standard B3			onfidentiality & dignity	of patient, and has	a system for guarding patient related inform	ation.
ME 83.1	Adequate visual privacy is provided at every point of care	X ray department has provision of privacy while taking X ray.	2	ОВ		
	every position care	USG department has provision of privacy while taking sonography	2	ОВ	provision of screen	
ME B3.2	Confidentiality of patients records and clinical information is maintained	Radiology has system to ensure the confidentiality of the reports generated	2	RR/SI	Radiology staff do not discuss the lab result outside. And reports are kept in secure place	
ME B3.3	The facility ensures the behaviours of staff is dignified and respectful, while delivering the services	Behaviour of staff is empathetic and courteous	2	PI		
Standard B4		ed and established procedures for infor	ming and involving pat	ient and their familio	es about treatment and obtaining informed o	onsent wherever it is required.

	There is established procedures for	Form F for USG under PNDT maintained for scan				
ME B4.1	taking informed consent before treatment and procedures	of pregnant woman	2	RR		
Standard B5		Facility ensures that there are	e no financial barrier to	access and that the	ere is financial protection given from cost of co	are.
ME B5.1	The facility provides cashless services to pregnant women, mothers and neonates as per prevalent government schemes	Free Diagnostic tests are available as per entitlement	2	PI/SI	Pregnant women, Infant and Children	
ME B5.3 ME B5.4	The facility provide free of cost treatment to Below poverty line patients without administrative hassles	Tests are free of cost for BPL patients	2	PI/SI	DELETED	Aplicable to all
ME 85.5	The facility ensures timely reimbursement of financial entitlements and reimbursement to the patients	Cashless investigation by empanelled lab for JSSK beneficiaries for test not available within the facility	2	PI/SI/RR		
	and reimbursement to the patients	the facility	Area	of Concern - C Inp	uts	
Standard C1					lable infrastructure meets the prevalent norr The room housing X-ray equipment have appropriate	ns
ME C1.1	Departments have adequate space as per patient or work load	Room Size of X ray unit is as per AERB safety code	2	ОВ	area to facilitate easy movement of staff & proper patient positioning.	
ME C1.2	Patient amenities are provide as per	Availability of adequate waiting area Attached toilet facility available	2	OB OB	For USG	
	patient load	Waiting area with sitting facility	2	OB		
ME C1.3	Departments have layout and demarcated areas as per functions	Entrance of X ray room is as per AERB layout guidelines	2	ОВ	Preferably one entrance with door having hydraulic mechanism to ensure that it is closed during procedure	
		Opening for Ventilation and natural light has been provided in X ray room as per AERB layout guidelines	2	ОВ	Windows should be above 2m from finished floor level outside the x ray. If no then shielding is provided is provided on the window up to 2 m	
		Positioning of chest stand as per AERB layout guidelines	2	ОВ	The chest stand should be located opposite to entrance door and control console	
		Positioning of control console as per AERB layout guidelines	2		Control console should be positioned as far away as possible from the X ray tube.	
ME C1.4	The facility has adequate circulation area and open spaces according to need and	Corridors are wide enough for movement of trolleys and stretchers	2	ОВ	2-3 meters	
ME CLS	local law The facility has infrastructure for intramural and extramural	Availability of functional telephone and Intercom	2	OB		
ME C1.6	communication Service counters are available as per	Services	2	OB		
ME C1.6	patient load The facility and departments are planned	No of X ray machines as per load	2	OB	Check for the adequacy X-ray machines as per load	
ME C1.7	to ensure structure follows the function/processes (Structure commensurate with the function of the hospital)	Unidirectional flow of goods and services	2	ОВ	No cris cross in the movement patient traffic and services flow Should be near emergency department	
Standard C2 ME C2.1	The facility ensures the seismic safety of		The facility ensures th	oe physical safety of	Check for fixtures and furniture like cupboards, cabinets,	
ME C2.3	the infrastructure The facility ensures safety of electrical	Non structural components are properly secured X-ray - does not have temporary connections	2	OB	and heavy equipment, hanging objects are properly fastened and secured Switch Roards other electrical installation are intact	
ME C2.3	establishment	and loosely hanging wires Adequate electrical socket provided for safe and	2	OB	Switch Boards other electrical installation are intact	
		smooth operation of lab equipment Stabilizer is provided for X-ray machine	2	OB		
ME C2.4	Physical condition of buildings are safe for providing patient care	Floors of the Radiology department are non slippery and even	2	ОВ		
		Positioning of mobile protective barrier as AERB layout guidelines	2	ОВ	Mobile protective barrier should to positioned in such as manner that the operator is completely shielded during exposure The thickness is appropriate taking into consideration of	
		Thickness of walls at X room are as AERB layout guidelines X ray department should not be located adjacent	2	OB/RR OB	(1) Distance from centre of patient table (2) type of shielding material (brick, concrete, steel, lead or any other material)	
Standard C3					safety and other disaster	
ME C3.1	The facility has plan for prevention of fire	Radiology has sufficient fire exit to permit safe escape to its occupant at time of fire	2	OB/SI		
ME C3.2	The facility has adequate fire fighting Equipment	Check the fire exits are clearly visible and routes to reach exit are clearly marked. Radiology department has installed fire Extinguisher that is Class A , Class B C type or	2	OB OB		
	Equipment	ABC type Check the expiry date for fire extinguishers are displayed on each extinguisher as well as due date for next refilling is clearly mentioned	2	OB/RR		
ME C3.3	The facility has a system of periodic training of staff and conducts mock drills regularly for fire and other disaster situation	Check for staff competencies for operating fire extinguisher and what to do in case of fire	2	SI/RR		
Standard C4	The facility has adequate specialist				ling the assured services to the current case I	oad
ME C4.1	doctors as per service provision The facility has adequate	Availability of Radiologist	2	OB/RR	200-400-2 >400-3	
ME C4.4	technicians/paramedics as per requirement	Availability of Radiographer	2	SI/RR	100-2, 200-3, 300-5, 400-7, 500-9	
ME C4.5	The facility has adequate support / general staff	Availability of housekeeping staff	2	SI/RR		
Standard C5	The departments have adequate	Availability of security staff Facility	provides drugs and co	SI/RR nsumables required	for assured list of services.	
ME C5.2	consumables at point of use	Availability Consumables Availability of personal protective equipment	2	OB/RR OB/RR	X ray films, Developer, Fixer, USG gel, printing paper Mobile protective barrier, Lead apron, Rubber hanging	
ME CS.3	Emergency drug trays are maintained at		2	OB/RR	flaps, hand glove, lead shields.	
ME CS.3 Standard C6	every point of care, where ever it may be needed				for assured list of services.	
ME C6.1	Availability of equipment & instruments		2	ОВ	TLD badges	TLD badges for all the technician
ME C6.3	Availability of equipment & instruments for diagnostic procedures being	Availability of functional X-ray machines	2	OB	300 MA X ray machine & 100 MA X ray machine	
	undertaken in the facility	Availability of functional Dental X-Ray	2	ОВ	Radio-Visio-Graph (RVG) – digital dental X-Ray,	
		Machine Availability of functional Ultrasonography	2	ОВ	Orthopantomogram (OPG) 2 one general purpose & one for Obstetric purpose	
		Availability of functional Portable X-ray	2	ОВ	60 MA X ray machine (Mobile)	
		Machine Availability of functional CT-scan machine	2	ОВ		
		Availability of Accessories for X ray	ż	ОВ	Cassettes X ray, Intensifying screen X ray, Lead letter (A- Z), Letter figures (0-9) and R & L (Manual). Computer, printer, x -ray holder/positioner, (Digital)	
ME C6.6	Availability of functional equipment and instruments for support services	Availability of equipment for cleaning	2	ОВ	Buckets for mopping, mops, duster, waste trolley, Deck brush	
ME C6.7	Departments have patient furniture and fixtures as per load and service provision	Availability of attachment/ accessories	2	ОВ	Bucky Stand	
		Availability of fixtures at radiology Availability of furniture	2 2	OB	X-ray View box, Electrical fixture for equipment rack and cupboard , Chair table	
Standard C7		Facility has a defined and establishe	d procedure for effective		nd augmentation of competence and performance of Check objective checklist has been prepared for	of staff
ME C7.1	Criteria for Competence assessment are defined for clinical and Para clinical staff	Check parameters for assessing skills and proficiency of clinical staff has been defined	2		assessing competence of doctors, nurses and paramedical staff based on job description defined for each cadre of staff. Daksha checklist issued by MoHFW can be used for this purpose.	
ME C7.2	Competence assessment of Clinical and Para clinical staff is done on predefined criteria at least once in a year	Check for competence assessment is done at least once in a year	2		Check for records of competence assessment including filled checklist, scoring and grading. Verify with staff for actual competence assessment done	
ME C7.9	The Staff is provided training as per defined core competencies and training plan	Training on radiation safety	2	SI/RR		
		Infection control & prevention training Patient Safety	2	SI/RR SI/RR	Bio medical Waste Management including Hand Hygiene	
		Basic Life Support	2	SI/RR SI/RR		

			2	SI/RR	To all category of staff. At the time of induction and	
		Training on Quality Management System	2	SI/RR	once in a year.	
ME C7.10	There is established procedure for utilization of skills gained thought trainings by on -job	Radiographers are skilled to operating	2	SI/RR	Check supervisors make periodic rounds of department and monitor that staff is working according to the	
INIC C7.20	supportive supervision	equipment	•	Jynn.	training imparted. Also staff is provided on job training wherever there is still gaps	
			Area of Cor	ncern - D Support	Services	
Standard D1		The facility has establish	ned Programme for ins	pection, testing and	maintenance and calibration of Equipment. 1. Check with AMC records/

The facility ensures safety of electrical establishment

Physical condition of buildings are safe for providing patient care

ME C1.6

ME C2.1

The facility has adequate circulation area and upon spaces according to need and local law trolleys.

The facility has infrastructure for intramural and extramural communication.

Service counters are available as per patient load.

Availability of telephone and intercom Services communication.

Availability of deep freezer for storage as per load.

The facility and departments are planned to ensure structure (ollows the function/processes (Structure commensurate with the nucrison of the hospital Emergency, OT and PO etc.).

Non structural components are properly secured

Window have wire meshwork and intact window panes

Mortuary building does not have temporary connections and loosely harving wire.

Adequate electrical socket provided for safe and smooth operation of morpuse freezer

Floors of the Mortuary are thick, durable and can be easily cleaned

Standard C3		Floors of the Mortuary are non slippery and even The facility has establish	ed Programme f	or fire safety and	other disaster	
ME C3.2	The facility has adequate fire fighting Equipment	Fire Extinguisher that is Class A , Class C type or ABC type are installed in mortuary	2	ОВ		
		Check the expiry date for fire extinguishers are displayed on each	2	OB/RR		
		extinguisher as well as due date for next refilling is clearly mentioned	-	ODJAN		
ME C3.3	The facility has a system of periodic training of staff and conducts mock drills regularly for fire and other disaster situation	Check for staff competencies for operating fire extinguisher and what to do in case of fire	2	SI/RR		
Standard C4		The facility has adequate qualified and trained s	taff, required fo	r providing the as	sured services to the current case load	
ME C4.1 ME C4.4					DELETED DELETED	
ME C4.5	The facility has adequate support / general staff	Availability of sweeper (substitute with Housekeeping staff)in Mortuary	2	SI/RR

	Facility has defined Quality policy, which is in congruency with the mission		2	SI/RR	Check quality policy of the facility has been defined in consultation with hospital staff and duly approved by the head of the facility. Also check	
ME G6.3	of facility	Check if Quality Policy has been defined and approved	2	3y KK	Quality Policy enables achievement of mission of the facility and health department	

ME G6.4	Facility has de defined quality objectives to achieve mission and quality policy	Check if SMART Quality Objectives have framed	2	SI/RR	Check short term valid quality objectivities have been framed addressing key quality issues in each department and cores services. Check if these objectives are Specific, Measurable, Attainable, Relevant and Time Bound.		
ME G6.5	Mission, Values, Quality policy and objectives are effectively communicated to staff and users of services	Check of staff is aware of Mission , Values, Quality Policy and objectives	2	SI/RR	Interview with staff for their awareness. Check if Mission Statement, Core Values and Quality Policy is displayed prominently in local language at Key Points		
ME G6.6	Facility prepares strategic plan to achieve mission, quality policy and objectives	Check if plan for implementing quality policy and objectives have prepared	2		Verify with records that a time bound action plan has been prepared to achieve quality policy and objectives in consultation with hospital staff. Check if the plan has been approved by the hospital management		
ME G6.7	Facility periodically reviews the progress of strategic plan towards mission, policy and objectives	Check time bound action plan is being reviewed at regular time interval	2	51/00	Review the records that action plan on quality objectives being reviewed at least onnce in month by departmental incharges and during the quality team meeting. The progress on quality objectives have been recorded in Action Plan tracking sheet		
Standard G7		The facility seeks continually	improvement by	practicing Quality	y method and tools.		
ME G7.1	The facility uses method for quality improvement in services	Basic quality improvement method	2	SI/OB	PDCA & 5S		
Standard G9		Facility has established procedures for assessing	, reporting, evalu	uating and manag	ring risk as per Risk Management Plan		
ME G9.6	Periodic assessment for Medication and Patient care safety risks is done as per defined criteria.	Check periodic assessment of safety risk is done using defined checklist periodically	2		Verify with the records. A comprehensive risk assessment of all processes should be done using pre define critera at least once in three month.		
	Area of Concern - H Outcomes						
Standard H1		The facility measures Productivity Indic	ators and ensure	s compliance with	h State/National benchmarks		
ME H1.1	Facility measures productivity Indicators on monthly basis	Proportion of non MLC cases	2	RR			
		Occupancy rate of cold storage for dead bodies	2	RR

					1	
		Signage for restricted area and safety hazard are displayed	2		1.Restricted signages at the entry & restricted area within the dialysis centre 2. Safety Hazard and Caution signs, for e.g. hazards from electrical shock, inflammables etc. shall be displayed at appropriate places	
ME B1.2	The facility displays the services and entitlements available in its departments	Services available and not available in the dialysis centre are displayed	2	ОВ	e.g Display of Haemodialysis for HIV or Hepatitis B/C patients	
		Name of the Nephrologist/in charge with registration number are displayed	2	ОВ	Contact details & days of visits of Nephrologist/in charge, Quality Managers are displayed	
		Important numbers are displayed	2	ОВ	Blood Banks, Fire Department, Police, Ambulance Services, ICU and OT	
ME B1.4	User charges are displayed and communicated to patients effectively	User Charges for dialysis services are displayed	2	ОВ	User charges(if any) are displayed at prominent places including display of free dialysis services for BPL/EWS patients	
ME B1.5	Patients & visitors are sensitised and educated through appropriate IEC / BCC approaches	IEC materials are displayed in waiting area	2	ОВ	IEC to prevent infection for patient with catheters & patient with fistulas or grafts, dietary advice are displayed IEC for care givers to manage day to day management	
		Relevant IEC are displayed inside dialysis unit(can be combined witrh above row in same column)	2	ОВ	Check for IEC related to fluid intake, Know about dry weight, Patient guide for access care are displayed inside the unit	
ME B1.6	Information is available in local language and easy to understand	Signages and information are available in local language	2	ОВ	At least in two languages with one being local	
ME B1.8	The facility ensures access to clinical records of patients to entitled personnel	Dialysis card/Logbook is provided to all patient	2	RR/SI/OB	Check dialysis card/Logbook is provided to the patient and records are updated after each session	
Standard B2	Services are delivered in a	manner that is sensitive to gender, religion	us and cultur	al needs, and t	there are no barrier on account of physical, o	economic, cultural or social reasons.
ME B2.1	Services are provided in manner that are sensitive to gender	Availability of female attendant/female staff, if a male staff examine, treat or manage a female patient	2	OB/SI	Ask the staff about the adopted procedure	
ME B2.3	Access to facility is provided without any physical barrier & friendly to specially able people	Availability of Wheel chair and stretcher for easy Access to the Dialysis unit	2	ОВ	Check availability of both wheel chair and stretcher for the dialysis patients	
		Availability of ramp with appropriate gradient	2		A gradient of 1:8	
		Availability of disabled friendly toilets	2	OB/SI	At least one disabled-friendly toilet readily accessible to the Dialysis unit	
ME B2.4	There is no discrimination on basis of social & economic status of patients.	There is no discrimination on the basis of social and economic status of the patients	2	OB/PI	Look for any discrepancies from the previous patient records receiving the services	
Standard B3	T	he facility maintains privacy, confidential	ity & dignity o	f patient, and	has a system for guarding patient related in	formation.
ME B3.1	Adequate visual privacy is provided at every point of care	Availability of screen/curtains	2	ОВ	Check for screen/curtains between the beds	

ME B3.2	Confidentiality of patients records and clinical information is maintained	Patient Records are kept at secure place beyond access to general staff/visitors	2	OB/SI	Confidentiality, security and integrity of records shall be ensured at all times	
ME B3.3	The facility ensures the behaviours of staff is dignified and respectful, while delivering the services	Behaviour of staff is empathetic and courteous	2	PI/OB		
ME B3.4	The facility ensures privacy and confidentiality to every patient, especially of those conditions having social stigma, and also safeguards vulnerable groups	Privacy and confidentiality of HIV cases	2	OB/SI	HIV status of the patient is coded and not displayed publicly Internal policy to be checked(for maintenance of record)	
Standard B4	The facility has defined and e	established procedures for informing and	involving pat	ient and their	families about treatment and obtaining info	rmed consent wherever it is required.
ME B4.1	There is established procedures for taking informed consent before treatment and procedures	Informed consent are obtained from the patient/ next of kin/ legal guardian as and when required	2	RR/SI	The consent includes general condition of the patient, treatment options, adverse reactions, consequence of missing dialysis, risk and complications Frequency of consent: before every session /every procedure	
ME B4.2	Patient is informed about his/her rights and responsibilities.	Patients' rights and responsibilities are displayed	2	PI/OB	Patients are aware of their rights and responsibilities	
ME B4.3	Staff are aware of Patients' rights and responsibilities	Staff is aware of patients' rights and responsibilities	2	SI	Randomly choose any staff	
ME B4.4	Information about the treatment is shared with patients or attendants, regularly	Dialysis Unit has a system in place to communicate with patient/ their family member regarding the nature and seriousness of the illness	2	PI/SI	Ask the family members whether they have been communicated and involved in the treatment plan and progress	
ME B4.4	The facility has defined and established grievance redressal system in place	Check availability of complaint box	2	OB/RR/SI	Check when it was last open, check for complaint received and action taken	
		Availability of display of process for grievance re addressal and whom to contact is displayed	2	OB/SI	Check for display regarding mechanism of grievance redressal	
Standard B5	Т		ncial barrier to	access and th	at there is financial protection given from co	ost of care.
ME B5.2	The facility ensures that drugs prescribed are available at Pharmacy and wards	All Drugs and consumables as per MoU with the private partner/hospital EML are free for BPL/EWS and other notified patients	2	PI/RR	Notified patients are the other poor patients validated by the facility in charge of the hospital	
ME B5.3	It is ensured that facilities for the prescribed investigations are available at the facility	Check that BPL/EWS and other notified patient has not incurred expenditure on diagnostics from outside	2	PI/RR	For APL Patients cost of diagnostics is included in the package rate	
ME B5.4	The facility provide free of cost treatment to Below poverty line patients without administrative hassles	Dialysis services are free for BPL and other notified patients	2	PI/RR/SI		
		APL Patients are charged as per the MoU rates	2	PI/RR/SI	The rates are inclusive of drugs, consumables and diagnostics (Give full compliance if it is free for all, or not applicable for the centre)	
ME B5.6	The facility ensure implementation of health insurance schemes as per National /state scheme.	Dialysis sessions of BPL families registered under PMJAY/Equivalent schemes are funded by respective scheme up to its maximum coverage	2	RR/SI	Check for any duplication of payments received under Pradhan Mantri National Dialysis programme and PMJAY/equivalent schemes	
Standard B6	The facility	has defined framework for ethical mana	gement inclu	ding dilemmas	confronted during delivery of services at pu	ublic health facilities

ME B6.1	Ethical norms and code of conduct for medical and paramedical staff have been established.	Ethical norms for Medical officers, Staff nurses and technician are defined and staff are aware about it	2	SI/RR	Ask staff about the ethical norms	
ME B6.3	The facility has an established procedure for entertaining representatives of drug companies and suppliers	No medical representatives are allowed in the dialysis unit	2	OB/RR/SI	Check that no promotional posters/activities are encouraged for drugs and diagnostics. Ask staff about the current practice	
ME B6.5	There is an established procedure for sharing of hospital/patient data with individuals and external agencies including non governmental organization.	Check dialysis unit has defined protocols for data sharing	2	RR/SI	Check list of agencies with whom the data is to be routinely shared. For any other agency a formal permission is sought from competent authority before sharing the data including press	
ME B6.6	There is an established procedure for 'end- of-life' care	Patients relatives are informed clearly about the deterioration in health condition of Patients	2	SI/RR/PI		
		There is established procedure for transfer of patients to other facilities in end stage of life	2	SI/RR/PI	Check the records for transfer of the patients to Specialist Hospital/Tertiary Hospital /Palliative Care Centres	
ME B 6.7	There is an established procedure for patients who wish to leave hospital against medical advice or refuse to receive specific treatment	Declaration is taken from the patient seeking early termination of dialysis and the consequences are explained	2	RR/SI	Check for filled declaration form	
ME B 6.9	There is an established procedure to issue of medical certificates and other certificates.	Check hospital has documented policy for issuing medical certificates	2	RR/SI	Check for policy defines List of certificates can be issued by the dialysis centre, Who can issue certificates, Formats shall used for different certificates, Record keeping of issued certificate, Procedures for issuing duplicate certificates	
ME B6.12	Facility has established a framework for identifying, receiving, and resolving ethical dillemas' in a time-bound manner through ethical committee	Check facility has defined its ethical issues management framework	2	SI/RR	(a) Check the adequacy of the framework. It address the ethical issues and decision making in clinical care (b) Check facility's ethical management framework address issues like admission, discharge, transfer, disclosure of information or any professional conflict which may not be in patient's best interest	

		Check facility has ethical committee or person designated to address the ethical issues confronted by medical professionals while delivering the services	2	SI/RR	research activities/ publishing the scientific papers/ supporting medical students in thesis writing/ running any course where patient data is collected and used for above mentioned activities - an ethical committee is constititued and approval are taken before publication. or facility may collaborate with the institutions where there are ethical committee is present and appropriate approvals, guided by applicable laws and regulations is taken. or the facilities where they are not involved in research activities, to address the ethical dielamma's a person or group is appointed to address the dilemmas effectively within	
		Check the list of ethical issues is available and regularly updated	2	RR/SI	Check when the list was last updated. Engage with the available medical professionals to check what type of ethical dilemmas they are facing while performing their job & how they are dealing with dielmma's.	
		Check the facility has defined mechanism identification and reporting of the ethical issues/ dilemmas confronted during services delivery	2	SI/RR	Check staff is aware of reporting mechanism	
		Check regular review of identified and reported ethical issue is done by appointed personnel /group/ committee	2	RR/SI	Check the timely resolution of the identified and reported ethical issues is done	
		Check all the decisions related to ethical dilemma's are communicated to all concerned	2 Area o	SI f Concern C: Ir	Check information regarding ethical dilemma's & its handling is also given to new joinee's	
Standard C1		The facility has infrastructure for delive			available infrastructure meets the prevalent	norms
ME C1.1	Departments have adequate space as per patient or work load.	Availability of adequate space for Dialysis room/area/Machine area	2	OB	At least 120 square feet per machine	
		Availability of dedicated Consultation room	2	ОВ

		Availability of adequate quantity of dialysate as per requirement Availability of medical gases	2	OB/RR/SI OB/RR	Dialysate prepared either commercially or on-site on daily basis meeting standards or regulatory requirements (ISO 23500:2014, ISO 13958:2014, ISO 11663:2014) Oxygen cylinders and suction machine or through piped supply	
ME C5.2	The departments have adequate consumables at point of use.	Availability of consumables, connectors, Tubing	2	OB/RR	Adequate quantity of disposable consumables like Blood tubing set, Fistula needle(16 G), Sodium Bicarbonate powder, IV sets, Dialyser starting kit, , Double lumen catheter set 12F(curved), etc. are available	
		Availability of adequate quantity of functional dialyser as per requirement	2	OB/RR/SI	Every patient is provided with either a new dialyser or a reprocessed dialyser of the same patient. All reprocessed dialysers must meet the standard norms for test of performance	
ME C5.3	Emergency drug trays are maintained at every point of care, where ever it may be needed.	Emergency Drug Tray/Crash Cart is maintained at dialysis unit	2	OB/RR	Inj. Adrenaline, Atropine, Hydrocortisone, Dexamethasone, Warfarin, Erythropoietin, ET Tube, Ambu Bag with Mask, Laryngoscope, etc.	
Standard C6		The facility has equ	<mark>iipment & inst</mark>	ruments requ	ired for assured list of services.	
ME C6.1	Availability of equipment & instruments for examination & monitoring of patients.	Availability of functional Equipment & Instruments for examination & Monitoring	2	ОВ	BP Apparatus, Stethoscope, Weighing Scale, Thermometer, Torch, X-ray view box, Multipara monitor	
ME C6.2	Availability of equipment & instruments for treatment procedures, being undertaken in the facility.	Availability of instruments for dialysis procedure	2	ОВ	Dialysis starting kit, Equipment for dressing/bandaging/suturing, Stand-by heamodialysis machine, Equipment for water treatment and dialyser reprocessing, etc.	
ME C6.3	Availability of equipment & instruments for diagnostic procedures being undertaken in the facility.	Availability of Point of care diagnostic devices	2	ОВ	Glucometer, ECG and HIV rapid diagnostic kit, Blood group testing, HbsAg(HBV)	
ME C6.4	Availability of equipment and instruments for resuscitation of patients and for providing intensive and critical care to patients.	Availability of functional Instruments for Resuscitation.	2	ОВ	1.Laryngoscope 2.Endotracheal tubes 3.Suction equipment 4.Xylocaine spray 5.Oropharyngeal and Nasopharyngeal airways 6.Ambu Bag- Adult & Paediatric	
ME C6.5	Availability of Equipment for Storage.	Availability of equipment for storage for drugs	2	ОВ	Refrigerator, Crash cart/Emergency Drug tray, instrument trolley/tray, dressing trolley/tray	
ME C6.6	Availability of functional equipment and instruments for support services.	Availability of equipments for cleaning	2	ОВ	Buckets for mopping, mops, duster, waste bins, cleaning brushes	
		Availability of equipment for sterilization and disinfection	2	ОВ	Autoclave	

ME C6.7	Departments have patient furniture and fixtures as per load and service provision.	Availability of patient bed with accessories	2	ОВ	Hospital graded Mattress IV stand Bed rails Stool Footstep, Bedside locker	
Standard C7	The facility h	as a defined and established procedure f	or effective ut	tilization, evalu	uation and augmentation of competence and	performance of staff
ME C7.2	Competence assessment of Clinical and Para clinical staff is done on predefined criteria at least once in a year	Criteria for Competence assessment are defined for doctor, nurse, technician.	2	SI/RR	Criteria may include skill, proficiency, knowledge and competencies required to carry out day to day procedures and manage complications. Competence assessment is done at least once in a year.	
ME C7.4	Performance evaluation of clinical and para clinical staff is done on predefined criteria at least once in a year	Performance based appraisal is done once in a year for all staff	2	SI/RR	Appraisal is done on the basis of objective assessments and linked with renumeration	
ME C7.9	The Staff is provided training as per defined core competencies and training plan.	All staff are trained in skills required for general management of the dialysis unit	2	SI/RR	Risk Management, Infection Control Practices, Bio-medical Waste Management, Patient and Fire Safety, Quality Management Comprehensive training programme for all staffs including PPP service providers	
		Doctors are trained in skills required for clinical management of dialysis unit	2	SI/RR	Evaluation, Initiation, Monitoring and Termination of Dialysis session including prevention and management of complication	
		Doctors, Nurses/Technicians are trained in general counselling of patients	2	SI/RR	Self-care, do's and don'ts, diet and psychological counselling	
		All staff are trained for life-saving skills	2	SI/RR	Basic life support (BLS)/ Advance life support (ALS) Doctors, nurses/technicians are trained for life saving skills	
		Periodic refresher training are provided for all staff	2	SI/RR	As mentioned in above checkpoints for different categories of staff	
Charles I Da		The facility has a stabilished 5		cern D: Suppo		
Standard D1		ine facility has established Program	nme for inspe	ction, testing a	and maintenance and calibration of Equipme	ent.
ME D1.1	The facility has established system for maintenance of critical Equipment.	All equipment are covered under AMC including preventive maintenance.	2	SI/RR	Haemodialysis (HD) machine & all the assessories including alarms	
		AMC/CMC of Water treatment system with reverse osmosis	2	SI/RR		
		There is system of timely corrective break down maintenance of the equipment	2	SI/RR	Maintenance for all the major equipmemts including process of periodic inspection Cleaning and maintenance The unit may have AMC/CMC for individuals machines or collectively enrolled under BMEMP	
		Staff of dialysis unit is skilled for routine trouble shooting of minor equipment failure	2	SI/RR		

					1	
		Maintenance of different components of water treatment system are recorded	2	OB/SI	The log book is adequately maintained	
ME D1.2	The facility has established procedure for internal and external calibration of measuring equipment.	All the measuring equipment/ instruments are calibrated	2	OB/RR	Dialysis machine (Blood pump, Heparin pump, Pressure monitor, Conductivity meter), Weighing scale, Thermometer, BP Apparatus	
ME D1.3	Operating and maintenance instructions are available with the users of equipment.	Operating instructions for critical equipment are available	2	OB/SI	Operating Dialysis Machine, Water Treatment System, Dialyzer Reprocessing, Preparation of Dialysate	
		Lay-out and flow diagram of the water treatment system is displayed in the water treatment room	2	ОВ	The flow-diagram is self-explanatory and easy to comprehend	
Standard D2	The f	facility has defined procedures for storage	, inventory m	anagement an	nd dispensing of drugs in pharmacy and pation	ent care areas.
ME D2.1	There is established procedure for forecasting and indenting drugs and consumables.	There is established system of timely indenting of consumables and drugs	2	SI/RR	Forecasting or demand generation manually/IT	
ME D2.2	The facility has established procedure for procurement of drugs.	There is an established procedure for placing requisition	2	SI/RR	Requisition are timely placed	
ME D2.4	The facility ensures management of expiry and near expiry drugs.	Expiry and near expiry dates are maintained at emergency drug tray	2	OB/SI	Please check for records for expiry and near expiry drugs are maintained for drug stored in the department	
		No expired drugs or consumables found	2	OB/SI	Check expiry date of dialysate packaging	
ME D2.5	The facility has established procedure for inventory management techniques.	Department maintained stock and expenditure register of drugs and consumables including buffer stock	2	SI/RR	There is practice of calculating and maintaining buffer stock	
ME D2.6	There is a procedure for periodically replenishing the drugs in patient care areas.	There is no stock out of drugs & consumables	2	SI/RR		
ME D2.7	There is a process for storage of vaccines and other drugs, requiring controlled temperature.	Temperature of refrigerators are kept as per storage requirement and records are maintained	2	OB/SI/RR	Check for temperature charts are maintained and updated periodically (Erythropoietin)	
Standard D3		The facility provides safe,	secure and co	mfortable env	ironment to staff, patients and visitors	
ME D3.1	The facility provides adequate illumination at patient care areas.	There is adequate illumination at the procedure area	2	ОВ	Provision of at least 300 lux.	
		There is adequate illumination at the water treatment area	2	ОВ	Provision of at least 300 lux.	
ME D3.2	The facility has provision of restriction of visitors in patient areas.	Entry of visitors into the dialysis unit are restricted	2	OB/SI	Visiting hours are defined, displayed & adhered with	
ME D3.3	The facility ensures safe and comfortable environment for patients and service providers.	The Dialysis unit shall be provided with effective and suitable ventilation to maintain comfortable room temperature.	2	OB/SI	Fans/ Air conditionings are available as per environment condition and requirement	
		Water treatment area should have measures for noise attenuation	2	ОВ		
		There is adequate ventilation to prevent over-heating	2	ОВ	In dialysis unit and water treatment area	
Standard D4		The facility has estable	isned Progran	nme for maint	enance and upkeep of the facility.	

ME D4.1	Exterior and interior of the facility building is maintained properly	Hospital infrastructure is adequately maintained along with interior of patient care areas are plastered & painted	2	OB/RR		
ME D4.2	Patient care areas are clean and hygienic	Floors, walls, roof, sinks patient care and circulation areas are clean	2	ОВ		
ME D4.5	The facility has policy of removal of condemned junk material	No condemned/junk material in the dialysis centre	2	OB/SI/RR		
ME D4.6	The facility has established procedures for pest, rodent and animal control	No stray animal/rodent/birds	2	OB/SI/RR		
Standard D5		The facility ensures 24 × 7 water and po	wer backup a	s per requirem	ent of service delivery, and support services	norms.
ME D5.1	The facility has adequate arrangement for storage and supply of potable water in all functional areas.	The unit shall have 24 hour provision of potable water for RO system	2	ОВ	Check the availability of functional water points for RO system	
ME D5.2	The facility ensures adequate power backup in all patient care areas as per load.	Availability of genset	2	ОВ	To meet the requirements of all machine	
		Availability of UPS	2	ОВ	Check the backup of UPS is at least up to 15 minutes in case of power failure/all dialysis machines are connected to a central servo controlled stabiliser of adequate capacity	
ME D5.3	Critical areas of the facility ensures availability of oxygen, medical gases and vacuum supply.	Availability of Centralized /local piped oxygen and vacuum supply	2	OB/RR	if oxygen cylinder/oxygen concentrator is available, then full compliance will be given	
ME D5.4	The facility has adequate arrangement for uninterrupted supply of RO water for dialysis unit	The dialysis unit have sufficient supply of RO water	2	ОВ	480 Litres of water needed per machine (Note: This does not include the water requirement of other activities of the unit such as hand washing)/ Water is available on 24*7 basis at all points of usages	
		The dialysis unit has adequate arrangements for preventing back flow of water	2	ОВ	Back-flow preventer Temperature blending valve Booster pump and raw water tank ±acid feed pump etc.	
		The RO plant has adequate arrangements for pre-treatment of water	2	OB/RR	Pre-treatment should consist of: 1. Filtration for suspended particles. 2.Activated carbon filtration 3.Softener or deionizers	
		The RO plant has standardized pipes and valves for water distribution	2	OB/RR	Check for: 1.All pipelines after reverse osmosis system are of stainless steel (grade 316) or medical grade PVC. 2.All valves joints & connectors are of the same material. 3. Bends & blind loops must be avoided	
		The RO plant has adequate arrangements for post-treatment of water	2	OB/RR	Microbial and UV filters or/and deionization	

					Please check for:			
		There is adequate arrangements for safe storage of water	2	OB/RR	Storage tank is made up of stainless steel or medical grade PVC with an air tight lid The tank has de-aeration valve & drain			
		The facility has adequate arrangements for management of drainage System	2	SI/RR	facility at the bottom The drains are provided with adequate gradients and adequate no. of floor traps are available to drain excess water			
Standard D6		Dietary services are available	as per servic	e provision and	d nutritional requirement of the patients			
ME D6.1	The facility has provision of nutritional assessment of the patients.	Availability of nutritional assessment and counselling facility	2	OB/PI	Ideally by a dietician else by the doctor(Arrangements could be made for videography lecture)			
Standard D7		The	facility ensur	es clean linen	to the patients.			
ME D7.2	The facility has established procedures for changing of linen in patient care areas	A fresh set of linen is provided to each patient and is changed in case of any major spill	2	OB/SI/RR/PI	On a daily basis			
ME D7.3	The facility has standard procedures for handling, collection, transportation and washing of linen.	There is an established procedures for handling dirty, soiled and clean linens	2	OB/SI/RR	Dirty, soiled and clean linens are collected, transported and stored separately			
Standard D9		Hospital has defin	ed and establi	ished procedui	res for Financial Management.			
ME D9.1	The facility ensures proper utilization of the fund provided to it.	There is no delay in payments to the service provider	2	SI/RR	Payments to the providers are made as per the MoU. If not applicable, give full compliance			
Standard D11	Roles & Responsibilities of administrative and clinical staff are determined as per govt. regulations and standards operating procedures.							
ME D11.1	The facility has established job description as per govt guidelines.	Staff is aware of their role and responsibilities	2	OB/SI/RR	Job descriptions/TOR are available with the facility			
ME D11.2	The facility has a established procedure for duty roster and deputation to different departments.	There is procedure to ensure that staff is available on duty as per duty roster and there is designated in charge for the department	2	OB/SI/RR				
ME D11.3	The facility ensures adherence to dress code as mandated by the administration.	Doctor, nursing staff and support staff adhere to their respective dress code	2	ОВ	All the categories of staffs are in proper dress code as assigned by the hospital management/administration			
Standard D12	Th	e facility has established procedure for n	nonitoring the	quality of out	sourced services and adheres to contractual	obligations		
ME D12.1	There is established system of contract management for the out sourced services.	There is procedure to monitor the quality and adequacy of outsourced services on regular basis	2	RR/SI	There is a valid MoU with outsourcing agencies (If not applicable, give full compliance)			
ME D12.2	There is a system of periodic review of quality of out-sourced services.	Regular monitoring of quality of services	2	SI/RR	The quality of services are monitored periodically using objective criteria, process of black listing and provision of penalties for non-conformance(check MoU)			
				cern - E Clinica				
Standard E1			ocedures for I	registration, co	onsultation and admission of patients.			
ME E1.1	The facility has established procedure for registration of patients	Every patient is provided with individual dialysis card/booklet with Unique identification number during registration	2	RR	The same card/booklet may be used for multiple sessions			
	l	1. 00.00.00.011	l	l	ļ			

ME E1.3	There is established procedure for admission of patients	There is provision of prior appointment for new & old patients Patient details are recorded in Dialysis Card/Booklet There is an established criteria for initiation of dialysis session	2 2	RR/PI RR SI/RR	Check the process for appointment & also advanced communication is given to the patient in case of any cancellation/ delay Check for that patient details like Name, age, Gender, Blood group, Nephrologist details, Dialysis start date, HBV/HCV status, etc. Criteria based on Nephrologist's recommendations, Dry weight/weight gain, Vital sign, KFT results and Physical finding	
Standard E2		The facility has defined and established n	rocedures for	clinical accord	ment, reassessment and treatment plan prep	aration
ME E2.1	There is established procedure for initial assessment of patients	Initial assessment of all patients on dialysis is done as per standard protocols	2	RR/SI	Initial Assessment will include weight, seated blood pressure, pulse rate, temperature, respiratory rate	aratton.
		Dialysis history is taken and recorded	2	RR	Check whether the patient has come for first session or a follow-up session	
		Physical Examination is done and recorded	2	RR	Look for signs of Mobility, Pain, Skin changes, Oedema, Signs of bruising & bleeding, Signs & symptoms of infection	
ME E2.2	There is established procedure for follow- up/ reassessment of Patients	There is fixed schedule for reassessment of stable and non-infective patients	2	RR/OB	Every hour and look for safety checks as Air detector/Line clamp, Dialysate Flow Rate, Dialysate temp, Conductivity, Status of heparin pump, "A" and "B" concentrate, Concentrate Na+, Alarm limit is set, if any	
		There is fixed schedule for reassessment of unstable and infective patients	2	RR/OB	Every half hour and look for safety checks as Air detector/Line clamp, Dialysate Flow Rate, Dialysate temp, Conductivity, Status of heparin pump, "A" and "B" concentrate, Concentrate Na+, Alarm limit is set, if any	
		There is system in place to identify and manage the changes in Patient's health status	2	RR/SI	Criteria is defined for identification, and management of high risk patients/ patient whose condition is deteriorating	
		Check the treatment or care plan is modified as per re assessment results	2	RR/SI	Check the re assessment sheets/ Case sheets modified treatment plan or care plan is documented	
ME E2.3	There is established procedure to plan and deliver appropriate treatment or care to individual as per the needs to achieve best possible results	Check healthcare needs of all hospitalised patients are identified through assessment process	2	RR/SI	Assessment includes physical assessment, history, details of existing disease condition (if any) for which regular medication is taken as well as evaluate psychological ,cultural, social factors	

		Check treatment/care plan is prepared as per patient's need Check treatment / care plan is documented Check care is delivered by competent	2 2	RR/SI RR/SI RR/SI	(a) According to assessment and investigation findings (wherever applicable). (b) Check inputs are taken from patient or relevant care provider while preparing the care plan. Care plan include:, investigation to be conducted, intervention to be provided, goals to achieve, timeframe, patient education, , discharge plan etc Check care plan is prepared and delivered	
		multidisciplinary team		·	as per direction of qualified physician	
Standard E3		Facility has defined and es	stablished pro	cedures for co	ntinuity of care of patient and referral	
ME E3.1	Facility has established procedure for continuity of care during interdepartmental transfer and referrals	There is an established procedure for patient transferred from dialysis unit to ICU /OT/ Emergency and vice versa	2	SI/RR	Check how hand over is given when patient is transferred from dialysis unit to ICU /OT/ Emergency and vice versa	
		There is an established procedure for referral of patients to higher facility	2	RR/SI	All patients are provided with referral card with details of patient, details of the facility where referred, treatment given, reasons for referral, etc.	
		Necessary support is provided for referral	2	RR/SI	Advance communication is done with higher centre, Referral vehicle is arranged	
ME E3.3	A person is identified for care during all steps of care	Doctor and nurse/technician is designated for each patient	2	RR/SI	At least one doctor is available for each shift and one nurse/technician for each patient	
		Detailed hand over is given between change of the shifts	2	RR/SI	Patient condition is reviewed during hand over between resident doctors as well as nurses/technicians	
Standard E4			s defined and	established pr	ocedures for nursing care	
ME E4.1	Procedure for identification of patients is established at the facility	There is a process for ensuring the identification of the patient before each dialysis session	2	OB/SI	Patient id band/ verbal confirmation/Bed no. etc. Any two identifiers may be used	
ME E4.2	Procedure for ensuring timely and accurate nursing care as per treatment plan is established at the facility	Dialysis chart is maintained	2	RR	Check for Patient name, Age, Sex, Id no, Date, Dialysis no, Weight (Pre/Post), BP (Pre/Post), Starting and closing time of dialysis session, Any symptoms or medication given, etc.	
ME E4.4	Nursing records are maintained	General records of haemodialysis are adequately maintained	2	RR/SI	Look for Id on dialyzer, Dialyzer type, Dialyzer reuse no, Machine no, Bed no, Dialysis duration, start and termination time, Dialysis no	

		Pre-dialysis records are adequately maintained	2	RR/SI	Look for Machine rinse with RO water, Dialyzer sterilant active, pre dialysis weight, dry weight of the patient, interdialytic wt. gain, UF target, pulse, BP, Temp, Anticoagulation bolus and maintenance dose with signature	
		Post-dialysis records are adequately maintained	2	RR/SI	of nurse/technician commencing Haemodialysis session Look for UF reading, post dialysis weight, weight loss/gain, achieved Kt/V, BP, Temp, Pulse, Inj. EPO/Iron/Carnitine, if any	
		Records of the safety checks are adequately maintained	2	RR/SI	All general, pre-dialysis and post-dialysis records are duly signed by nurse/technician	
Standard E5		Facility has a p	roceaure to ic	ientity high ris	sk and vulnerable patients.	
ME E5.2	The facility identifies high risk patients and ensure their care, as per their need	High risk patients are identified and treatment given on priority	2	OB/SI	Hepatitis B/C, HIV positive patients, Grossly dearranged KFT, Immuno-compromised patients and patients with pre-existing illnesses e.g. Heart Failure, IHD, LVF, HTM, COPD, etc.	
Standard E7		Facility ha	s defined pro	cedures for saf	fe drug administration	
ME E7.1	There is process for identifying and cautious administration of high alert drugs (to check)	High alert drugs and chemicals available in department are identified	2	SI/OB	Dialysate A & B, Electrolytes like Potassium chloride, Anti thrombolytic agent, insulin, warfarin, Heparin, etc.	
		Maximum dose of high alert drugs are defined and communicated	2	SI/RR	Value for maximum doses are available with the technician and doctor in the dialysis unit	
		There is process to ensure that right doses of high alert drugs are only given	2	SI/RR	A system of independent double check before administration, Error prone medical abbreviations are not used	
ME E7.2	Medication orders are written legibly and adequately	Every Medical advice and procedure is accompanied with date, time and signature in comprehendible handwriting	2	RR	Check for Date, Time, name of the doctor, reg no, no of medicines, dosage form, strength, time-duration, dosage route, signature of doctor, instructions for patient, etc.	
ME E7.3	There is a procedure to check drug before administration/ dispensing	Drugs and chemicals are checked for expiry and other inconsistency before administration	2	OB/SI		
		Check single dose vial are not used for more than one dose	2	ОВ	Check for any open single dose vial with left over content indented to be used later on	
		Any adverse drug reaction is recorded and reported	2	RR/SI		
ME E7.4	There is a system to ensure right medicine is given to right patient	Administration of medicines done after ensuring right patient, right drug, right dose, right time, right route, right reason and right documentation	2	SI/OB		
Standard E8		Facility has defined and established pro	cedures for m	aintaining, up	dating of patients' clinical records and their	storage
ME E8.1	All the assessments, re-assessment and investigations are recorded and updated	Dialysis process is recorded as per defined assessment schedule	2	RR	Pre, Post and Intra Dialysis processes and investigations are recorded	

ME E8.2	All treatment plan prescription/orders are recorded in the patient records.	Each Dialysis session is planned and documented on dialysis card	2	RR	Before initiation of dialysis session	
ME E8.5	Adequate form and formats are available at point of use	Standard Formats are available	2	RR/OB	Check for the availability of Dialysis card, Dialysis chart, Dialysis record, Referral slip, Consent form, Lab requisition form, etc.	
ME E8.6	Register/records are maintained as per guidelines	Registers and records are maintained as per guidelines	2	RR		
ME E8.7	The facility ensures safe and adequate storage and retrieval of medical records	Safe keeping of patient records	2	ОВ		
Standard E9		The facility has de	fined and esta	ablished proce	dures for discharge of patient.	
ME E9.2	Case summary and follow-up instructions are provided at the discharge	Dialysis card is updated at the end of each dialysis session	2	RR/PI	Look for date of next session	
ME E9.3	Counselling services are provided as during discharges wherever required	Patient is counselled before discharge	2	PI/SI	Patient is counselled for do's and don'ts, care of access site, diet, water intake, dry weight, etc.	
Standard E11			ablished proc	edures for Em	ergency Services and Disaster Management	
ME E11.2	Emergency protocols are defined and	Protocols of dialysis for emergency	2	SI/RR	Acute renal failure/septicaemia in IPD/ICU	
	implemented	cases are defined and implemented		'	patients	
Standard E12	There are established procedures for Pre-	Container is labelled properly after the			edures of diagnostic services	
ME E12.1	testing Activities	sample collection	2	ОВ		
ME E12.2	There are established procedures for testing Activities	Facility for point of care diagnostic tests are available	2	OB/SI	Blood Sugar, Blood group, HbsAg(HBV) etc.	
Standard E13		The facility has defined and estab	lished proced	ures for Blood	Bank/Storage Management and Transfusion	1.
ME E13.9	There is established procedure for transfusion of blood	Consent is taken before transfusion	2	RR		
		Patient's identification is verified before transfusion	2	SI/OB		
		Blood is kept on optimum temperature before transfusion	2	RR		
		Blood transfusion is monitored and regulated by qualified person	2	SI/RR		
		Blood transfusion note is written in patient records	2	RR		
ME E13.10	There is an established procedure for monitoring and reporting Transfusion complication	Any major or minor transfusion reaction is recorded and reported to responsible person	2	RR		
Standard E24	Complication		ined and esta	blished proced	lure for Haemodialysis Services	
	The facility has defined and established	Patient washes hand and relevant limb		, , , , , , , , , , , , , , , , , , ,		
ME 24.1	procedure for Pre Haemodialysis assessment	(with AVF/GF) with soap and water before entering the dialysis unit	2	OB/RR/SI	Encourage the patients to wash their hands themselves	
		All the patients are weighed before entering the dialysis unit	2	OB/RR/SI	Encourage the patients to weigh themselves	
		Pre-dialysis observations are performed and pre-recorded	2	OB/RR/SI	Seated blood pressure, pulse, temp, respiratory rate are recorded	_
		Complete assessment of the patient is done before commencement of the dialysis	2	OB/RR/SI	Look for any changes since last session in mobility, pain, skin state, oedema, bruising/bleeding or any sign or symptom of infection	

		Information of the previous dialysis session is reviewed	2	OB/RR/SI	Note pre and post dialysis observation of the previous dialysis session and any dialysis variances	
		Baseline information is reviewed	2	OB/RR/SI	Weight gain (ideally less than 5%), urine output, blood glucose level	
		Dialysis plan is documented based on observation and patient assessments	2	OB/RR/SI	Plan should have details of Ultra filtration goal (amount of fluid to be removed), Ultra-filtration rate, dialysis duration, any expected complications	
		Review and prepare for pre-dialysis testing	2	OB/RR/SI	HbSAg, HCV, HBV, HIV, MRSA	
		Blood sample is taken for pre-dialysis testing	2	OB/RR/SI	Hb, KFT, LFT	
ME 24.2	The facility has defined and established procedure for care during Haemodialysis	Prepare the access sites	2	OB/RR/SI	Cleaning and disinfection with antiseptic solution	
		Safety checks for Blood tubing are ensured	2	OB/RR/SI	Check that Inserted canula is secured, check for air bubble via Air detector/Line clamps, and patency of the circuit	
		Safety checks for Dialysis machine are ensured	2	OB/RR/SI	Check that Dialysis machine is disinfected and rinsed with RO water. Conductivity is maintained. Alarm limit and dialysate flow rate is set	
		Safety checks for dialyzer and dialysate are ensured	2	OB/RR/SI	Check that Dialyzer reuse no is written, Check for Dialysate temp and A and B concentrate	
		Periodic and regular monitoring of the patient is done	2	OB/RR/SI	All the observations are recorded including BP, Pulse, Respiratory Rate, Machine parameters	
		Patient with any comorbidity are monitored and parameters are recorded periodically	2	OB/RR/SI	Blood sugar monitoring of diabetic patient and INR of patients on Warfarin	
		Routine medications are administered to patients as scheduled	2	SI/RR		
		Intervention/Medication during the session are monitored and recorded	2	OB/RR/SI	Change in machine settings Iron/Erythropoietin	
		Strict monitoring of the dialysis related errors is done	2	OB/RR/SI	Needle dislodgement and clotted circuit	
ME 24.3	The facility has defined and established procedure for care after completion of Haemodialysis	Keep equipment ready to terminate the session and disconnect the patient from the machine	2	OB/SI	Swab, Tape, Bandage	
		Take post-dialysis sample	2	OB/RR/SI	For KFT or any other investigations	
		Disconnect the access as per the protocols	2	OB/RR/SI	Sequence and timing of removing the cannulas and tubing's	

	•					
		Post-dialysis observations are recorded	2	OB/RR/SI	BP, Pulse, Temp, Respiratory Rate, Blood Sugar, UF reading, weight, Inj. Iron/Erythropoietin	
		Patient is counselled for self-care	2	OB/RR/SI	Water intake, Protein intake, Care of the access site, do's and don't, alarming signs and when & whom to contact in case of emergencies	
			Area of Cond	cern - F: Infect	ion Control	
Standard F1	The fac	cility has infection control Programme an			evention and measurement of hospital associated	ciated infection.
ME F1.2	The facility has provision for Passive and active culture surveillance of critical & high risk areas.	Dedicated person is in-charge for infection control in the dialysis unit	2	SI/RR	Doctor/Nurse/Technician may be designated Person responsible for quality can also handle	
		Surface and environment samples are taken for microbiological surveillance	2	SI/RR	Swab are taken from infection prone surfaces at least once in month like machine, machine control panel, dialyzer(in case of reuse), bed railing, working bench,machine,dialysate, RO,connectors used /supply to machine etc.	
		Water samples are taken for microbial culture and microelements in RO water	2	SI/RR	Analysis of water used for haemodialysis for bacteria required to be done at least monthly and analysis for chemicals required to be done at least every six months	
ME F1.3	The facility measures hospital associated infection rates.	There is procedure to report cases of infection with blood borne infections	2	SI/RR	The facility should develop methods to monitor, review and evaluate all blood borne infections	
ME F1.4	There is provision of Periodic Medical Check-up and immunization of staff.	There is procedure for immunization of the staff	2	SI/RR	Hepatitis B and Tetanus Toxoid etc.	
		Periodic medical check-ups of the staff	2	SI/RR	At least once in a year including housekeeping and support staff	
ME F1.5	The facility has established procedures for regular monitoring of infection control practices.	Regular monitoring of infection control practices	2	SI/RR	Hand washing and infection control audits done at periodic intervals	
Standard F2		The facility has defined and imp	lemented pro	cedures for en	suring hand hygiene practices and antisepsis	
ME F2.1	Hand washing facilities are provided at point of use.	Availability of hand washing facility as per norms	2	ОВ	One hand wash basin to be provided for every 2-3 dialysis stations in the main dialysis area	
		Availability of running water	2	OB/SI	Ask Staff if water supply is regular	
		Availability of antiseptic liquid soap with dispenser.	2	OB/SI	Check for availability/ Ask staff if the supply is adequate and uninterrupted	
		Availability of Alcohol based Hand rub	2	OB/SI	One alcohol hand rub for every dialysis machine. Ask staff for regular supply.	
		Display of Hand washing Instruction at Point of Use	2	ОВ	Prominently displayed above the hand washing facility , preferably in Local language	
		Availability of elbow operated taps	2	OB		
		Hand washing sink is wide and deep enough to prevent splashing and retention of water	2	ОВ		
	_	•	•		•	

ME F2.2	The facility staff is trained in hand washing practices and they adhere to standard hand washing practices The facility ensures standard practices and	Staff aware of when to wash hand	2	SI/OB	Ask for demonstration Ask 5 moments for hand washing	
ME F2.3	materials for antisepsis.	Availability of Antiseptic Solutions Proper cleaning of vascular access site with antiseptics	2	OB OB/SI	Providine iodine, Isopropyl alcohol, etc. Before preparing the access for cannulation/blood tubing, before giving IM/IV injection and drawing blood (If not applicable, give full compliance)	
Standard F3		The facility ensure	s standard pra	ctices and ma	terials for Personal protection.	
ME F3.1	The facility ensures adequate personal protection Equipment as per requirements.	Clean gloves are available at point of use	2	OB/SI		
		Availability of Mask	2	OB/SI		
		Availability of gown/ Apron	2	OB/SI	Staff and visitors	
		Availability of shoe cover	2	OB/SI	Staff and visitors	
		Availability of Caps	2	OB/SI	Staff and visitors	
		Personal protective kit for infectious patients	2	OB/SI		
ME F3.2	The facility staff adheres to standard personal protection practices.	No reuse of disposable gloves, Masks, caps and aprons.	2	OB/SI		
		Compliance to correct method of wearing and removing the gloves	2	SI		
Standard F4		The facility has standa	ard procedure	s for processir	ng of equipment and instruments.	
ME F4.1	The facility ensures standard practices and materials for decontamination and cleaning of instruments and equipments	Cleaning & Decontamination of dialysis machine and patient care area	2	SI/OB	Surfaces like dialysis bed or chair, countertops, external surfaces of dialysis machine & control panel etc. by wiping with .5% hypochlorite solution followed by removing chlorine residues from metallic surfaces with water	
		Proper Decontamination of instruments after use	2	SI/OB	Ask staff how they decontaminate the instruments like scissors, haemostats, clamps (Soaking in 0.5% Chlorine Solution), blood pressure cuffs, stethoscopes, etc. (Wiping with 0.5% Chlorine Solution or 70% Alcohol)	
		Contact time for decontamination is adequate	2	SI/OB	10 minutes	
		Cleaning of instruments after decontamination	2	SI/OB	Cleaning is done with detergent and running water after decontamination	
		Proper handling of Soiled and infected linen	2	SI/OB	Sorting, Rinsing or sluicing of soiled/infected linen is done outside the dialysis unit/ Patient care area	
		Staff know how to make chlorine solution	2	SI/OB	Prepared chlorine solution has 500-600ppm free chlorine (e.g., 1:100 dilution of a 5.25-6.15% sodium hypochlorite provides 525-615 ppm available chlorine)	

ME F4.2	The facility ensures standard practices and materials for disinfection and sterilization of instruments and equipments	Dialysis machines are disinfected after each session taking in to account level of biofilm and endotoxin removal Bottles containing unused dialysate are	2	OB/SI OB/SI	Using Citric acid in the hydraulic circuit of haemodialysis machines	
		disinfected after session Opened bottles containing unused fluid should be discarded after 24 hours	2	OB/SI		
		Unfinished bottles used for infected patients must be discarded immediately	2	OB/SI		
		Cleaning and disinfection of Hemodialysers is done as per protocols	2	OB/SI/RR	Blood compartment is rinsed with water till the effluent is clear while hydrogen peroxide should be instilled in dialysate compartment followed by rinsed out of cleaning agents from dialysate compartment with water	
		Backwashing or Reverse Ultrafiltration is done as per protocols	2	OB/SI/RR	Backwashing is carried out for at least 15 minutes with periodic 1-2 minute rinsing of the blood compartment. The direction of flow should be reversed at 5 minute intervals.	
		Only dialysers clearing the 'Test of performance' are reused	2	OB/SI/RR	The 'Test of Performance' includes testing for total cell volume (TCV should be more than <80%), membrane integrity (should pass leak test) and perform residual disinfection (shall be checked using 'Potency Test Strip'). Dialyser failing 'Test of Performance' are discarded	
		Labelling and storage of Dialyzer is done appropriately	2	OB/SI/RR	Dialyzer should be kept in a sealed polythene bag/leakproof box with the patients name, TCV, reuse number and date marked with indelible ink over it. If stored for more than 7 days prior to the subsequent use, it should be refilled with disinfectant before use	
		Cleaning/Disinfection of the pipes of water management system	2	OB/SI/RR	Distribution loop of water treatment system should be cleaned preferably, once in 6 months	
		Autoclaved dressing material is used	2	OB/SI	Ensure the traceability of sterilized packs is maintained during storage	
Standard F5		Physical layout and environr	mental contro	of the patien	t care areas ensures infection prevention	
ME F5.1	Functional area of the department are arranged to ensure infection control practices	Facility layout ensures separation of general patient from infectious patients	2	ОВ	Separate bed/area for HBV, HCV and HIV cases	
		Facility layout ensures separation of routes for clean and dirty items	2	ОВ		
		Floors and wall surfaces are easily cleanable	2	ОВ	Look for non-slippery floor (or epoxy grout in tiles), surfaces should be smooth & washable, seamless and impervious with sealed or welded joints	

ME F5.2	The facility ensures availability of standard materials for cleaning and disinfection of	Availability of disinfectant as per requirement	2	OB/SI	Sodium Hypochlorite solution, Citric acid, Glutaraldehyde	
	patient care areas	Availability of cleaning agent as per	2	OB/SI	Hospital grade phenyl, disinfectant	
		requirement	2	06/31	detergent solution	
ME F5.3	The facility ensures standard practices are followed for the cleaning and disinfection of patient care areas	Staff is trained for spill management	2	SI/RR	Blood spill management	
		Cleaning of patient care area with detergent solution	2	SI/RR	chair, armrests, bedside table top/counter, and drawer/ cupboard handles) and high touch surfaces (the exterior surfaces of the HD machine, computer screens, and keyboards	
		Staff is trained for preparing cleaning solution as per standard procedure	2	SI/RR		
		Standard practice of mopping and scrubbing are followed	2	OB/SI	Unidirectional mopping from inside out	
		Cleaning equipment like broom are not used in patient care areas	2	OB/SI	Any cleaning equipment leading to dispersion of dust particles in air should be avoided	
		Use of three bucket system for mopping	2	OB/SI		
		External foot wares are restricted	2	OB		
ME F5.4	The facility ensures segregation infectious patients.	Isolation and barrier nursing procedure are followed for septic cases	2	OB/SI		
		Separate staff for infected patients	2	OB/PI	Staff caring for HBV, HCV, HIV patients	
ME F5.5	The facility ensures air quality of high risk area.	Negative pressure is maintained in Isolation	2	OB/SI		
Standard F6		ty has defined and established procedure	es for segregat	ion, collection	, treatment and disposal of Bio Medical and	hazardous Waste.
ME F6.1	Facility Ensures segregation of Bio Medical Waste as per guidelines and 'on-site' management of waste carried out as per guidelines	Availability of colour coded bins at point of waste generation	2	ОВ	Adequate number. Covered. Foot operated.	
		Availability of colour coded non chlorinated plastic bags	2	ОВ		
		Segregation of Anatomical and soiled waste in Yellow Bin	2	OB/SI	Human Anatomical waste, Dialysers after treatment, Items contaminated with blood, body fluids, dressings, plaster casts, cotton swabs and bags containing residual or discarded blood and blood components.	
		Segregation of infected plastic waste in red bin	2	ОВ	Items such as tubing, bottles, dialysers filters, intravenous tubes and sets, catheters, urine bags, syringes (without needles and fixed needle syringes) and vacutainers with their needles cut) and gloves	
		Display of work instructions for segregation and handling of Biomedical waste	2	ОВ	Pictorial and in local language	

		There is no mixing of infectious and general waste	2	ОВ		
ME F6.2	Facility ensures management of sharps as per guidelines	Availability of functional hub cutters	2	ОВ	See if it has been used or just lying idle.	
		Segregation of sharps waste including Metals in white (translucent) puncture proof, leak proof, tamper proof containers	2	ОВ	See availability near the point of generation. Needles, needles from needle tip cutter or burner, scalpels, blades, or any other contaminated sharp object that may cause puncture and cuts. This includes both used, discarded and contaminated metal sharps	
		Availability of post exposure prophylaxis	2	SI/OB	Ask if available. Where it is stored and who is in charge of that.	
		Staff knows what to do in condition of needle stick injury	2	SI	Look for facilities for post-exposure prophylaxis	
		Contaminated and broken glass are disposed in puncture proof and leak proof box/ container with Blue colour marking	2	ОВ	Vials, slides and other broken infected glass	
ME F6.3	Facility ensures transportation and disposal of waste as per guidelines	Check bins are not overfilled	2	SI/OB		
		Disinfection of liquid waste before disposal	2	SI/OB	Dialysate A and B, Discarded disinfectant	
		Transportation of bio medical waste is done in close container/trolley	2	SI/OB		
		A.	rea of Concer	n - G : Quality	Management	
Standard G1			blished organ	izational fram	ework for quality improvement.	
ME G1.1	The facility has a quality team in place.	A Quality Circle is formed and functional with a designated nodal officer for quality.	2	RR/SI	Quality circle may have nephrologist/equivalent, Technician, nurses and housekeeping staff.	
ME G1.2	The facility reviews quality of its services at periodic intervals.		2	RR/SI	Quality circle meets at least once in a

		T				
		Non-compliances are enumerated and recorded	2		Check the non compliances are presented & discussed during quality team meetings	
ME G3.4	Actions are planned to address gaps observed during quality assurance process	Check action plans are prepared and implemented as per internal assessment record findings	2	SI/RR	Randomly check the details of action, responsibility, time line and feedback mechanism	
ME G3.5	Planned actions are implemented through Quality Improvemnet Cycles (PDCA)	Check PDCA or revalent quality method is used to take corrective and preventive action	2	SI/RR	Check actions have been taken to close the gap. It can be in form of action taken report or Quality Improvement (PDCA) project report	
Standard G4	The facility	has established, documented implemente	ed and mainta	ined Standard	Operating Procedures for all key processes	and support services.
ME G4.1	Departmental standard operating procedures are available.	Standard operating procedure for department has been prepared and available	2	RR		
		Current version of SOP are available with process owner	2	RR	Check current version of SOP is available with the staff of Dialysis Unit.	
ME G4.2	Standard Operating Procedures adequately describes process and procedures.	Department has documented procedure for ensuring patients rights including consent, privacy, confidentiality & entitlement	2	RR	Processes pertaining to ensuring privacy, confidentiality, respectful maternity care and consent	
		Department has documented procedure for safety & risk management	2	RR	Processes related to physical safety, patient safety and risk assessment	
		Department has documented procedure for support services & facility management.	2	RR	Process description of support services such as equipment maintenance, calibration, housekeeping, security, storage and inventory management	
		Department has documented procedure for general patient care processes	2	RR	Processes of triage, assessment, admission, identification of high risk patients, Referral , Medication management and maintenance of clinical records	
		Department has documented procedure of pre-dialysis care.	2	RR	Processes of physical assessment, information related to previous dialysis session and dialysis plan	
		Department has documented procedure of care during dialysis session.	2	RR	Monitoring of the patient, frequency of observation as per their clinical status, safety measures e.g. needle dislodgement, clotted circuit, adverse drug reaction, etc.	
		Department has documented procedure of post-dialysis care.	2	RR	Protocols for post-dialysis investigations, disconnecting access, dressing, post-dialysis advice and counselling	
		Department has documented procedure for infection control & bio medical waste management	2	RR	Process of Hand Hygiene, personal protection, environmental cleaning, instrument sterilization, asepsis, Bio Medical Waste management, surveillance and monitoring of infection control practices.	

					Process of internal quality assessment &	
		Department has documented procedure for quality management & improvement	2	RR	gap analysis, Root cause analysis, Change ideas to address the gap, implementing & monitoring the change ideas (PDCA)	
		Department has documented procedure for data collection, analysis & using the information for improvement	2	RR	Process related to collection of data & quality indicators , their analysis and use for quality improvement	
ME G4.3	Staff is trained and aware of the procedures written in SOPs.	Check Staff is aware of relevant part of SOPs	2	SI/RR	Interview dialysis Unit staff for their awareness about content of SOPs	
ME G4.4	The facility ensures the documented policies and procedures are appropriately approved and controlled	Standard operating procedure for department is duly approved by the competent authority	2	RR		
		Work instructions are duly approved	2	ОВ		
		Work instructions are displayed	2	ОВ	How to calculate dry weight, information on maintaining fluid balance before, during and after dialysis session, bio-medical waste management, hand wash instructions (when and how), diet counselling, etc.	
		SOP is controlled by providing unique identification number	2	RR		
		Standard operating procedure for department is reviewed periodically by quality circle	2	RR	At least once in a year	
		Revision history of the SOP is documented	2	RR	Date of revision, revision no, changes suggested by, changes made, reason of change, etc.	
Standard G 5	Th	e facility maps its key processes and seek	s to make the	m more efficie	ent by reducing non value adding activities and	wastages
ME G5.1	The facility maps its critical processes.	Process mapping of critical processes done	2	SI/RR	Critical processes are the ones where there are some problem-delays, errors, cost, time, etc. and improvement will make our process effective and efficient.	
ME G5.2	The facility identifies non value adding activities/waste/redundant activities.	Non value adding activities are identified	2	SI/RR	Non value adding activities are wastes. In these steps resources are expanded, delays occur, and no value is added to the service.	
ME G5.3	The facility takes corrective action to improve the processes.	Processes are improved & implemented	2	SI/RR	Look for the improvements made in the critical process in measurable terms.	
Standard G6		The facility has defined Mission, Value	s, Quality poli	cy and Objecti	ves, and prepares a strategic plan to achieve th	nem.
ME G6.1	Facility has defined mission statement	Check if mission statement has been defined adequately	2	RR/SI	Mission statement should be defined by the implementing agency (In-house/PPP) with purpose, target users and long term goal of dialysis unit. Mission should be aligned with the stated mission of Pradhan Mantri National Dialysis Program	
ME G6.3	Facility has defined Quality policy, which is in congruency with the mission of facility	Check if Quality Policy has been defined and approved	2	RR/SI	Check quality policy has been defined in consultation with dialysis unit staff and duly approved by appropriate authority.	

					T		
ME G6.4	Facility has de defined quality objectives to achieve mission and quality policy	Check if SMART Quality Objectives have framed	2	RR/SI	Check if the Quality objectives are Specific, Measurable, Attainable, Relevant and Time Bound.		
ME G6.5	Mission, Values, Quality policy and objectives are effectively communicated to staff and users of services	Check if staff is aware of Mission , Values, Quality Policy and objectives	2	RR/SI	Interview with staff for their awareness. Check if Mission Statement and Quality Policy is displayed prominently in local language at Key Points		
ME G6.6	Facility prepares strategic plan to achieve mission, quality policy and objectives	Check if plan for implementing quality policy and objectives have prepared	2	RR/SI	Verify with records that a time bound action plan has been prepared to achieve quality policy and objectives in consultation with staff.		
ME G6.7	Facility periodically reviews the progress of strategic plan towards mission, policy and objectives	Check time bound action plan is being reviewed at regular time interval	2	RR/SI	Review the records that action plan on quality objectives being reviewed at least once in month by departmental in charges and during the quality team meeting. The progress on quality objectives have been recorded in Action Plan tracking sheet		
Standard G7		The facility seeks con	tinually impro	vement by pra	acticing Quality method and tools.		
ME G7.1	Facility uses method for quality improvement in services	Basic quality improvement method	2	SI/OB	PDCA & 5S		
		Advance quality improvement method	2	SI/OB	Six sigma, lean.		
ME G7.2	Facility uses tools for quality improvement in services	7 basic tools of Quality	2	SI/RR	Minimum 2 applicable tools are used		
Standard G8	Facility has defined, approved and communicated Risk Management framework for existing and potential risks.						
ME G8.1	Risk Management framework has been defined including context, scope, objectives and criteria	There is a well defined and documented Risk Management Framework	2	SI/RR	The risk management framework should include incident reporting related to 1. Patient: Identification, Assessment, Diagnosis, Patient fall 2. Device related: Dialyzer identification, Efficacy of dialyzer, Alarm failure, Clotted circuit, Short-circuit 3. Process related: Haematoma, Air, Embolism, Fluid Imbalance, Dialysis plan, Monitoring errors, Infection control and prevention, Needle dislodgement and Safety checks and mitigation measures		
ME G8.3	Risk Management Framework includes process of reporting incidents and potential risk to all stakeholders	Check if process of reporting risks and hazards have been defined and implemented	2	SI/RR	Responsibility of identifying the existing and potential risks is defined amongst staff and all the staff are aware of how to identify the risks, how to report them and mitigate them		
ME G8.5	Modality for staff training on risk management is defined	Check training on risk management has been provided to all staff members	2	SI/RR	Verify with the training records . Training on risk management at least should be provided to person/staff responsible in haemodialysis unit for indemnifying and managing risks		

ME G8.6	Risk Management Framework is reviewed periodically	Check risk management framework is reviewed at least once in a year	2	SI/RR	Check with the records that quality circle reviews the framework at least once in a year	
Standards G9		Facility has established procedures for a	assessing, repo	orting, evaluat	ing and managing risk as per Risk Managemen	t Plan
G9.3	Risk assessment criteria and checklist for assessment have been defined and communicated to relevant stakeholders	Check if risk assessment checklist is available with stakeholders	2	SI/RR	Check if facility has prepared assessment checklist for identifying risk on routine basis. This checklist has been disseminate to the staff members responsible for identifying and reporting risks	
G9.4	Periodic assessment for Physical and Electrical risks is done as per defined criteria	Check if periodic assessment of Physical, Fire and electrical safety risk is done using the risk assessment checklist	2	SI/RR	Verify with the assessment records. Comprehensive of physical, Fire and electrical safety should be done at least once in three month	
G9.7	Periodic assessment for potential risk regarding safety and security of staff including violence against service providers is done as per defined criteria	Check if Periodic assessment of violence risks is done	2	SI/RR	Verify with records. At least once in year and whenever a major incident has occurred.	
G9.8	Risks identified are analysed, evaluated and rated for severity	Check if various risks identified during the risk assessment proceeds are evaluated	2	SI/RR	Risk identified should be listed and evaluated for their severity, frequency for occurrence and consequences.	
G9.9	Identified risks are treated based on severity and resources available	Risks are prioritized and action plan is made to eliminate/mitigate the risks	2	SI/RR	Verify with the records that a risk priority number (RPN) is given to each identified risk. Risks are prioritized based on their RPN and action plan is prepared and implemented to eliminate/mitigate the occurrence of risks	
Standard G10		The facility has established clinical gov	ernance frame	ework to impr	ove the quality and safety of clinical care proce	esses
ME G10.3	Clinical care effectiveness criteria has been defined and communicated	Criteria for effectiveness of dialysis sessions are defined and communicated	2	SI/RR	For e.g. URR (Urea Reduction Ratio), and Kt/V (amount of fluid that is cleared of urea during each dialysis session/volume of water a person's body contains), Symptomatic improvement	
		The facility has established process to review the clinical care	2	RR/SI	Check parameter are defined & implemented to review the clinical care i.e. through Ward round, peer review, morbidity & mortality review, patient feedback, clinical audit & clinical outcomes.	
		Check regular ward rounds are taken to review case progress	2	RR/SI	(1) Both critical and stable patients (2) Check the case progress is documented in BHT/ progress notes-	
		Check the patient /family participate in the care evaluation	2	RR/SI	Feedback is taken from patient/family on health status of individual under treatment	
		Check the care planning and co- ordination is reviewed	2	RR/SI	System in place to review internal referral process, review clinical handover information, review patient understanding about their progress	

ME G10.4	Facility conducts the periodic clinical audits	Periodic dialysis unit audits are	2	SI/RR	Look for records. Should be conducted at	
IME G10.4	including prescription, medical	conducted.	2	SI/KK	least quarterly.	
		There is procedure to conduct medical audits	2	RR/SI	Check medical audit records (a) Completion of the medical records i.e. Medical history, assessments, re assessment, investigations conducted, progress notes, interventions conducted, outcome of the case, patient education, delineation of responsibilities, discharge etc. (b) Check whether treatment plan worked for the patient (C) progress on the health status of the patient is mentioned (d) whether the goals defined in treatment plan is met for the individual cases (e) Adverse clinical events are documented (f) Re admission	
		There is procedure to conduct death audits	2	RR/SI	(1) All the deaths are audited by the committee. (2) The reasons of the death is clearly mentioned (3) Data pertaining to deaths are collated and trend analysis is done (4) A through action taken report is prepared and presented in clinical Governance Board meetings / during grand round (wherever required)	
		There is procedure to conduct prescription audits	2	RR/SI	(1) Random prescriptions are audited (2) Separate Prescription audit is conducted foe both OPD & IPD cases (3) The finding of audit is circulated to all concerned (4) Regular trends are analysis and presented in Clinical Governance board/Grand round meetings	
		All non compliance are enumerated recorded for medical audits	2	RR/SI	Check the non compliances are presented & discussed during clinical Governance meetings	
		All non compliance are enumerated recorded for death audits	2	RR/SI	Check the non compliances are presented & discussed during clinical Governance meetings	
		All non compliance are enumerated recorded for prescription audits	2	RR/SI	Check the non compliances are presented & discussed during clinical Governance meetings	

ME G10.5	Clinical care audit data is analysed, and actions are taken to close the gaps identified during the audit process	Non Compliance are enumerated and recorded, Action plan prepared, Corrective and preventive action taken	2	SI/RR	Look for completeness of audit report with non-compliances identified, action plan with designated responsibilities, corrective and preventive plan is implemented with measurable improvements	
		Check action plans are prepared and implemented as per medical audit record findings	2	RR/OB	Randomly check the actual compliance with the actions taken reports of last 3 months	
		Check action plans are prepared and implemented as per death audit record's findings	2	RR	Randomly check the actual compliance with the actions taken reports of last 3 months	
		Check action plans are prepared and implemented as per prescription audit record findings	2	RR	Randomly check the actual compliance with the actions taken reports of last 3 months	
		Check the data of audit findings are collated	2	RR	Check collected data is analysed & areas for improvement is identified & prioritised	
		Check PDCA or revalent quality method is used to address critical problems	2	RR	Check the critical problems are regularly monitored & applicable solutions are duplicated in other departments (wherever required) for process improvement	
ME G10.6	Governing body/top management of healthcare facilities ensures accountability for clinical care provided	Top management review the audit reports and PSS periodically	2	SI/RR	Members of the top management meet at least quarterly, audits and PSS analysis reports are reviewed, minutes of the meeting are recorded, the minutes show that data relating to audit reports and grievances are discussed, decisions to improve quality are made and progress is followed.	
ME G10.7	Facility ensures easy access and use of standard treatment guidelines and implementation tools at point of care	Standard norms, guidelines and other implementation tools are accessible to Dialysis unit's staff	2	SI/RR	Ask staff how they adhere with norms, guidelines and implementation tools during the provision of care at Haemodialysis Unit	
		Check standard treatment guidelines / protocols are available at point of use	2	SI/RR	Staff is aware of Standard treatment protocols/ guidelines	
		Check treatment plan is prepared as per Standard treatment guidelines Check the drugs are prescribed as per	2	SI/RR	Check staff adhere to clinical protocols while preparing the treatment plan Check the drugs are as per EML or

				Concern - H: Oເ		
Standard H1	71 6 100		ity Indicators	and ensures co	ompliance with State/National Benchmarks.	
ME H1.1	The facility measures productivity Indicators on monthly basis	Average dialysis session conducted per day	2	RR	Total no of dialysis sessions done in a month/ total no of days in a month	
		Percentage of dialysis session conducted free of cost for entitled patients	2	RR	No of dialysis session done free*100/ total no of dialysis sessions conducted	
Standard H2		The facility measures Effi	ciency Indicat	ors and ensure	e to reach State/National Benchmark.	
ME H2.1	The facility measures efficiency Indicators on monthly basis	Average dialysis sessions performed per machine	2	RR	Total no of dialysis sessions performed/ total no of functioning dialysis machine	
		Downtime critical equipments/unit	2	RR		

		Percentage of patients shortening their dialysis sessions	2	RR	No of patients leaving dialysis session before completion of dialysis session*100/ total no of dialysis sessions conducted	
Standard H3		The facility measures Clinical	Care & Safety	Indicators and	tries to reach State/National benchmark	
ME H3.1	The facility measures Clinical Care & Safety Indicators on monthly basis	Dialysis complication rate (Percentage of incidence of complication occurring while dialysis session)	2	RR	Total no of complications occurring during dialysis session e.g. Haematoma, Needle dislodgement, Dialyzer mismatch, Air embolism, Clotted circuit/ Total no of dialysis sessions	
		No of adverse events per thousand patients	2	RR		
		Average Urea Reduction Ratio	2	RR	Average of (pre dialysis urea-post dialysis urea) of all the patients underwent dialysis session	
		Average Kt/V	2	RR	Average of Kt/V (1.2)(amount of fluid that is cleared of urea during each dialysis session/volume of water a person's body contains) of all the patients underwent dialysis session	
		Dialyser reuse rate	2	RR	Total no of dialysis sessions performed/ Total no of dialyzer used	Single Dialyzer not to be used for more than 8 times (in reprocessing machine) or bundle volume is >70% which is earlier.
		Culture Surveillance sterility rate	2	RR	% of environmental swab culture reported positive	
Standard H4		The facility measures Service	Quality Indica	tors and endea	wours to reach State/National benchmark	
ME H4.1	The facility measures Service Quality Indicators on monthly basis	Average days in availing follow up sessions	2	RR		Avg.Waiting time for follow up session
		Patient Satisfaction Score	2	RR

Facility has de defined, approved and communicated Risk Management framework for existing and potential risks.			Gantt Chart/Project Management	2	SI/RR		
	Standard G8		Facility has de defined, approved an	d communicated Ri	sk Management fra	mework for existing and potential risks.	

ME G8.1	Risk Management framework has been defined including context, scope, objectives and criteria	Check for adequacy of Risk Management Framework	2	SI/RR	Review the risk management framework document. Check scope and objectives of the framework is contextual to the facility and criterion for identifying risk has been explicitly laid out.	
ME G8.2	Risk Management framework defines the responsibilities for identifying and managing risk at each level of functions	Check if responsibilities for identifying and managing risk has been defined and communicated	2	SI/RR	Review risk management framework delineation of responsibilities amongst staff for identifying the risk in their work area and their management. Verify with the staff members if they are aware of their responsibilities	
ME G8.3	Risk Management Framework includes process of reporting incidents and potential risk to all stakeholders	Check if process of reporting risks and hazards have been defined	2	SI/RR	Review risk management framework for process of reporting incidents including near miss and potential risks	
ME G8.4	A compressive list of current and potential risk including potential strategic, regulatory, operational, financial, environmental risks has been prepared	Check if list of existing and potential risk have been prepared	2	SI/RR	Review risk management framework includes list of identified current and potential risks. These may included safety, strategic, financial, statutory, operational and environmental risks.	
ME G8.5	Modality for staff training on risk management is defined	Check training on risk management has been provided to key staff members	2	SI/RR	Verify with the training records . Training on risk management at least should be provided to person responsible for indemnifying and managing risks	
ME G8.6	Risk Management Framework is reviewed periodically	Check risk management framework is reviewed at least once in a year	2	SI/RR	Check with the records that quality team/ risk management committee reviews the framework at least once in a year	
Standard G9		Facility has established procedures for	assessing, reportin	g, evaluating and m	anaging risk as per Risk Management Plan Review the risk management plan document. Check it has been	
ME G9.1	Risk management plan has been prepared and approved by the designated authority and there is a system of its updating at least once in a year	Check if a valid risk management plan is available at the facility	2	SI/RR	updated at lest once in a month and duly approved by the head of facility.	
ME G9.2	Risk Management Plan has been effectively communicated to all the staff, and as well as relevant external stakeholders	Check if risk management plan has been communicated to all stake holders	2	SI/RR	ask staff if they are aware of key actionable points of risk management plan of their concerned areas. Check what measures hospital administration has taken for effective dissemination of risk management plan amongst staff members, outsource agencies and as well as concerned officials in district and state health administration	
ME G9.3	Risk assessment criteria and checklist for assessment have been defined and communicated to relevant stakeholders	Check if risk assessment checklist is available with stakeholders	2	SI/RR	Check if facility has prepared assessment checklist for identifying risk on routine basis. This checklist has been disseminate to the staff members responsible for identifying and reporting risks	
ME G9.4	Periodic assessment for Physical and Electrical risks is done as per defined criteria	Check if periodic assessment of Physical and electrical safety risk is done using the risk assessment checklist	2	SI/RR	Verify with the assessment records. Comprehensive of physical and electrical safety should be done at least once in three month	
ME G9.5	Periodic assessment for potential disasters including re is done as per de defined criteria	Check periodic assessment pf potential disaster is done periodically	2	SI/RR	Check comprehensive assessment of both manmade and natural potential disaster is done at least once in year	
ME G9.6	Periodic assessment for Medication and Patient care safety risks is done as per defined criteria.	Check periodic assessment of medication and patient care safety risk is done using defined checklist periodically	2	SI/RR	Verify with the records. A comprehensive risk assessment of all clinical processes should be done using pre define d criteria at least once in three month.	
ME G9.7	Periodic assessment for potential risk regarding safety and security of staff including violence against service providers is done as per defined criteria	Check if Periodic assessment of violence risks is done	2	SI/RR	Verify with records. At least once in year and whenever a major incident has occurred.	
ME G9.8	Risks identified are analysed evaluated and rated for severity	Check if various risks identified during the risk assessment proceeds are formally evaluated	2	SI/RR	Risk identified should be listed and evaluated for their security and frequency for occurrence. A risk severity score / grade should be give to each risk identified and according gaps should be rated. Verify with the records	
ME G9.9	Identified risks are treated based on severity and resources available	Check if risk have high severe are prioritised.	2	SI/RR	Check risks are prioritized base on their severity rating. Verify with the records	
ME G9.10	A risk register is maintained and updated regularly to risk records identify ed risks, there severity and action to be taken	Check if a risk register is maintained	2	SI/RR	Check hospital administration/ responsible committee maintains a risk register which risk identified, their severity, action to be taken to mitigate risk and follow up action. Check if risk register share been updated timely.
