	Area of Concern A- Service Provision			
Standard A1.	Facility Provides Curative Services	#REF!	100%	#REF!
Standard A2	Facility provides RMNCHA Services	#REF!	100%	#REF!
Standard A3.	Facility Provides diagnostic Services	#REF!	100%	#REF!
Standard A4	Facility provides services as mandated in National Health Programmes/ State Scheme	100%	NA	100%
Standard A5.	Facility provides support services	#REF!	NA	#REF!
Standard A6.	Health services provided at the facility are appropriate to community needs.	#REF!	NA	#REF!
	Area of Concern B- Patient Rights			
Standard B1.	Facility provides the information to care seekers, attendants & community about the available services and their modalities	#REF!	100%	#REF!
Standard B2.	Services are delivered in a manner that is sensitive to gender, religious, and cultural needs, and there are no barrier on account of physical economic, cultural or social reasons.	#REF!	100%	#REF!
Standard B3.	Facility maintains the privacy, confidentiality & Dignity of patient, and has a system for guarding patients related information	#REF!	100%	#REF!
Standard B4.	Facility has defined and established procedures for informing patients about the medical condition, and involving them in treatment planning, and facilitate informed decision making patient.	#REF!	100%	#REF!
Standard B5.	Facility ensures that there are no financial barrier to access and that there is financial protection given from cost of hospital services.	#REF!	100%	#REF!
Standard B6	Facility has defined framework for ethical management including dilemmas confronted during delivery of services at public health facilities	100%	NA	100%
	Area of Concern C - Inputs			
Standard C1.	The facility has infrastructure for delivery of assured services, and available infrastructure meets the prevalent norms	#REF!	100%	#REF!
Standard C2.	The facility ensures the physical safety of the infrastructure.	#REF!	100%	#REF!
Standard C3.	The facility has established Programme for fire safety and other disaster	#REF!	100%	#REF!
Standard C4.	The facility has adequate qualified and trained staff, required for providing the assured services to the current case load	#REF!	100%	#REF!
Standard C5.	Facility provides drugs and consumables required for assured list of services.	#REF!	100%	#REF!
Standard C6.	The facility has equipment & instruments required for assured list of services.	#REF!	100%	#REF!
Standard C7	Facility has a defined and established procedure for effective utilization, evaluation and augmentation of competence and performance of staff	#REF!	100%	#REF!
	Area of Concern D- Support Services			
Standard D1.	The facility has established Programme for inspection, testing and maintenance and calibration of Equipment.	#REF!	100%	#REF!
Standard D2.	The facility has defined procedures for storage, inventory management and dispensing of medicines and consumables in pharmacy and patient care areas	#REF!	100%	#REF!
Standard D3.	The facility provides safe, secure and comfortable environment to staff, patients and visitors.	#REF!	100%	#REF!
Standard D4.	The facility has established Programme for maintenance and upkeep of the facility	#REF!	100%	#REF!
Standard D5.	The facility ensures 24X7 water and power backup as per requirement of service delivery, and support services norms	#REF!	100%	#REF!
StandardD6	Dietary services are available as per service provision and nutritional requirement of the patients.	#REF!	NA	#REF!
Standard D7.	The facility ensures clean linen to the patients	#REF!	100%	#REF!
Standard D8	The facility has defined and established procedures for promoting public participation in management of hospital transparency and accountability.	100%	NA	NA
Standard D9	Hospital has defined and established procedures for Financial Management	100%	NA	NA
Standard D10.	Facility is compliant with all statutory and regulatory requirement imposed by local, state or central government	#REF!	NA	#REF!
Standard D11.	Roles & Responsibilities of administrative and clinical staff are determined as per govt. regulations and standards operating procedures.	#REF!	100%	#REF!
Standard D12	Facility has established procedure for monitoring the quality of outsourced services and adheres to contractual obligations	#REF!	NA	#REF!
	Area of Concern E- Clinical Services			

Standard E1.	The facility has defined procedures for registration, consultation and admission of patients.	#REF!	100%	#REF!
Standard E2.	The facility has defined and established procedures for clinical assessment, reassessment and treatment plan preparation.	#REF!	100%	#REF!
Standard E3.	Facility has defined and established procedures for continuity of care of patient and referral	#REF!	100%	#REF!
Standard E4.	The facility has defined and established procedures for nursing care	#REF!	100%	#REF!
Standard E5.	Facility has a procedure to identify high risk and vulnerable patients.	#REF!	100%	#REF!
Standard E6.	Facility ensures rationale prescribing and use of medicines	#REF!	100%	#REF!
Standard E7.	Facility has defined procedures for safe drug administration	#REF!	100%	#REF!
Standard E8.	Facility has defined and established procedures for maintaining, updating of patients' clinical records and their storage	#REF!	100%	#REF!
Standard E9.	The facility has defined and established procedures for discharge of patient.	#REF!	NA	#REF!
Standard E10.	The facility has defined and established procedures for intensive care.	100%	NA	100%
Standard E11.	The facility has defined and established procedures for Emergency Services and Disaster Management	#REF!	100%	#REF!
Standard E12.	The facility has defined and established procedures of diagnostic services	#REF!	100%	#REF!
Standard E13.	The facility has defined and established procedures for Blood Bank/Storage Management and Transfusion.	#REF!	100%	#REF!
Standard E14	Facility has established procedures for Anaesthetic Services	#REF!	100%	NA
Standard E15.	Facility has defined and established procedures of Operation theatre services	#REF!	100%	NA
Standard E16.	The facility has defined and established procedures for the management of death & bodies of deceased patients	#REF!	100%	100%
Standard E17	Facility has established procedures for Antenatal care as per guidelines	#REF!	NA	NA
Standard E18	Facility has established procedures for Intranatal care as per guidelines	100%	100%	NA
Standard E19	Facility has established procedures for postnatal care as per guidelines	100%	100%	NA
Standard E20	The facility has established procedures for care of new born, infant and child as per guidelines	#REF!	NA	#REF!
Standard E21	Facility has established procedures for abortion and family planning as per government guidelines and law	#REF!	NA	NA
Standard E22	Facility provides Adolescent Reproductive and Sexual Health services as per guidelines	#REF!	NA	NA
Standard E23	Facility provides National health program as per operational/Clinical Guidelines	100%	NA	100%
Standard E24	The facility has defined and established procedure for Haemodialysis Services	100%	NA	NA
	Area of Concern F- Infection Control			
Standard F1.	Facility has infection control program and procedures in place for prevention and measurement of hospital associated infection	#REF!	100%	#REF!
Standard F2.	Facility has defined and Implemented procedures for ensuring hand hygiene practices and antisepsis	#REF!	100%	#REF!
Standard F3.	Facility ensures standard practices and materials for Personal protection	#REF!	100%	#REF!
Standard F4.	Facility has standard Procedures for processing of equipment and instruments	#REF!	100%	#REF!
Standard F5.	Physical layout and environmental control of the patient care areas ensures infection prevention	#REF!	100%	#REF!
Standard F6.	Facility has defined and established procedures for segregation, collection, treatment and disposal of Bio Medical and hazardous Waste.	#REF!	100%	#REF!
	Area of Concern G- Quality Control			
Standard G1	The facility has established organizational framework for quality improvement	#REF!	100%	#REF!
Standard G2	Facility has established system for patient and employee satisfaction	#REF!	100%	#REF!
Standard G3.	Facility have established internal and external quality assurance programs wherever it is critical to quality.	#REF!	100%	#REF!
Standard G4.	Facility has established, documented implemented and maintained Standard Operating Procedures for all key processes and support services.	#REF!	100%	#REF!
Standard G5.	Facility maps its key processes and seeks to make them more efficient by reducing non value adding activities and wastages	#REF!	#DIV/0!	#REF!
Standard G6.	The facility has defined Mission, values, Quality policy and objectives, and prepares a strategic plan to achieve them	#REF!	100%	#REF!
Standard G7.	Facility seeks continually improvement by practicing Quality method and tools.	#REF!	#DIV/0!	#REF!
Standard G8.	Facility has de defined, approved and communicated Risk Management framework for existing and potential risks.	100%	NA	NA
Standard G9	Facility has established procedures for assessing, reporting, evaluating and managing risk as per Risk Management Plan	#REF!	100%	#REF!
Standard G10.	The facility has established clinical Governance framework to improve quality and safety of clinical care processes	#REF!	100%	#REF!

	Area of Concern H- Outcome			
Standard H1.	The facility measures Productivity Indicators and ensures compliance with State/National benchmarks	#REF!	100%	#REF!
Standard H2.	The facility measures Efficiency Indicators and ensure to reach State/National Benchmark	#REF!	100%	#REF!
Standard H3.	The facility measures Clinical Care & Safety Indicators and tries to reach State/National benchmark	#REF!	100%	#REF!
Standard H4.	The facility measures Service Quality Indicators and endeavours to reach State/National benchmark	#REF!	100%	#REF!

Standard D1.		The facility has established Progra	amme for insp	ection, testing a	nd maintenance and calibration of Equipment.	
	The facility has established	All equipment are covered under			Check with AMC records/ Warranty documents	
ME D1.1.	system for maintenance of critical Equipment	AMC including preventive maintenance	2	SI/RR	2. Staff is aware of the list of equipment covered under AMC.	
		There is system of timely corrective break down maintenance of the equipment	2	SI/RR	1.Check for breakdown & Maintenance record in the log book 2. Staff is aware of contact details of the agency/person in case of breakdown.	
		There has system to label Defective/Out of order equipment and stored appropriately until it has been repaired	2	OB/RR		
ME D1.2.	The facility has established procedure for internal and external calibration of measuring Equipment	All the measuring equipment/ instrument are calibrated	2	OB/ RR		
ME D1.3.	Operating and maintenance instructions are available with the users of equipment	Operating instructions for critical equipment are available	2	OB/SI		
Standard D2.	The facility has de	fined procedures for storage, invento	ory manageme	nt and dispensin	g of medicines and consumables in pharmacy and	patient care areas
ME D2.1	There is established procedure for forecasting and indenting drugs and consumables	There is established system of timely indenting of consumables and drugs	2	SI/RR	Stock level are daily updated Indents are timely placed	
ME D2.3.	The facility ensures proper storage of drugs and consumables	Drugs are stored in containers/tray/crash cart and are labelled	2	ОВ	Labelled with drug name, drug strength and expiry date	
		Empty and filled cylinders are labelled	2	ОВ		
ME D2.4.	The facility ensures management of expiry and	Drugs expiry dates' are maintained at emergency drug tray	2	OB/RR		
	near expiry drugs	No expired drug found	2	OB/RR		
		Records for expiry and near expiry drugs are maintained for drug stored at department	2	RR	Check register/DVDMS/other supply chain software for record of stock of expired and near expiry drugs	
ME D2.5.	The facility has established procedure for inventory management techniques	There is practice of calculating and maintaining buffer stock in Emergency	2	SI/RR		

		Department maintained stock register of drugs and consumables in Emergency	2	RR/SI	Record of drug received, issued and balance stock of drug in hand	
		There is practice of calculating and maintaining buffer stock in ambulance	2	SI/RR		
		Department maintained stock register of drugs and consumables in ambulance	2	RR/SI	Check record of drug received, issued and balance stock in hand	
ME D2.6.	There is a procedure for periodically replenishing the drugs in patient care areas	There is established procedure for replenishing drug tray emergency crash cart	2	SI/RR		
		There is established procedure for replenishing drug tray emergency crash cart in ambulance	2	OB/SI		
		There is no stock out of drugs	2	SI/RR	Random stock check of some essential medicines. E.g. Paracetamol, Atenolol, Amlodipine, Azithromycin, etc.	
ME D2.7.	There is process for storage of vaccines and other drugs, requiring controlled temperature	Temperature of refrigerators are kept as per storage requirement and records twice a day and are maintained	2	OB/RR	Check for refrigerator/ILR temperature charts. Charts are maintained and updated twice a day	
ME D2.8.	There is a procedure for secure storage of narcotic and psychotropic drugs	Narcotics and psychotropic drugs are kept separately in lock and key	2	OB/SI		
Standard D3.		The facility provides safe	, secure and co	omfortable enviro	onment to staff, patients and visitors.	
ME D3.1.	The facility provides adequate illumination level at patient care areas	Adequate illumination at procedure area	2	ОВ	Resuscitation area, dressing room and examination area	
		Adequate illumination at receiving and triage area	2	ОВ		
ME D3.2.	The facility has provision of restriction of visitors in patient areas	Visitors are restricted at resuscitation and procedure area	2	OB/SI		
ME D3.3	The facility ensures safe and comfortable environment for patients and service providers	Temperature control and ventilation in patient care area	2	PI/OB	Fans/ Air conditioning/Heating/Exhaust/Ventilators as per environment condition and requirement	
		Temperature control and ventilation in nursing station/duty room	2	SI/OB	Fans/ Air conditioning/Heating/Exhaust/Ventilators as per environment condition and requirement	
ME D3.4.	The facility has security system in place at patient care areas	There are set procedures for handling mass situation and violence in emergency	2	SI/OB	See for linkage to police, self protection form staff	
		Hospital has sound security system to manage overcrowding in emergency	2	OB/SI		
ME D3.5	The facility has established measure for safety and security of female staff	Ask female staff whether they feel secure at work place	2	SI		
Standard D4.		The facility has esta	blished Progra	amme for mainter	nance and upkeep of the facility	
ME D4.1	Exterior of the facility building is maintained appropriately	Building is painted/whitewashed in uniform colour	2	ОВ		
		Interior of patient care areas are plastered & painted	2	ОВ		
ME D4.2.	Patient care areas are clean and hygienic	Floors, walls, roof, roof topes, sinks patient care and circulation areas are Clean	2	ОВ	All area are clean with no dirt,grease,littering and cobwebs	
		Surface of furniture and fixtures are clean Toilets are clean with functional	2	ОВ		
NAT DA 3	Hospital infrastructure is	flush and running water Check for there is no seepage ,	2	OB		
ME D4.3.	adequately maintained	Cracks, chipping of plaster Window panes , doors and other	2	OB OB		
		fixtures are intact Patients beds are intact and	2	ОВ	Mattresses are intact and clean	
ME D4.5.	The facility has policy of removal of condemned junk material	painted No condemned/Junk material in the Emergency	2	ОВ		
ME D4.6	The facility has established procedures for pest, rodent and animal control	No stray animal/rodent/birds	2	ОВ		
Standard D5.		The facility ensures 24X7 water and p	ower backup	as per requireme	nt of service delivery, and support services norms	
	The facility has adac					
ME D5.1.	The facility has adequate arrangement storage and supply for portable water in all functional areas	Availability of 24x7 running and potable water	2	OB/SI		
	-					

ME D5.2.	The facility ensures adequate power backup in all patient care areas as per load	Availability of power back in Emergency	2	OB/SI		
		Availability of UPS	2	OB/SI		
		Availability of Emergency light	2	OB/SI		
ME D5.3.	Critical areas of the facility ensures availability of oxygen, medical gases and vacuum supply	Availability of Centralized /local piped Oxygen and vacuum supply	2	ОВ		
Standard D7.		TI	he facility ens	ures clean linen to	the patients	
ME D7.1.	The facility has adequate availability of linen for meting its need.	Clean Linens are provided at observation beds	2	OB/RR		
ME D7.2.	The facility has established procedures for changing of linen in patient care areas The facility has standard	Linen are changed after change shift of each patient or whenever it get soiled	2	OB/RR		
ME D7.3	procedures for handling , collection, transportation and washing of linen	There is system to check the cleanliness and Quantity of the linen received from laundry	2	SI/RR		
Standard D10.		Facility is compliant with all statute	ory and regula	tory requirement	imposed by local, state or central government	
ME D10.1.	The facility has requisite licences and certificates for operation of hospital and different activities	Valid licences for ambulances are available	2	RR/SI		
ME D10.3.	The facility ensure relevant processes are in compliance with statutory requirement	Staff is aware of requirements of medico legal cases	2	SI		
Standard D11.		Responsibilities of administrative and	clinical staff a	re determined as	per govt. regulations and standards operating pro	ocedures.
		Staff is aware of their role and			I	
ME D11.1.	The facility has established job description as per govt guidelines	responsibilities	2	SI		
ME D11.2.	The facility has a established procedure for duty roster and deputation to different departments	There is procedure to ensure that staff is available on duty as per duty roster	2	RR/SI	Check for system for recording time of reporting and relieving (Attendance register/ Biometrics etc)	
		There is designated in charge for department	2	SI		
ME D11.3.	The facility ensures the adherence to dress code as mandated by its administration / the health department	Doctor, nursing staff and support staff adhere to their respective dress code	2	ОВ		
Standard D12	Fai	cility has established procedure for m	onitoring the	quality of outsou	ced services and adheres to contractual obligation	ns
ME D12.1	There is established system for contract management for out sourced services	There is procedure to monitor the quality and adequacy of outsourced services on regular basis	2	SI/RR	Verification of outsourced services (cleaning/ Dietary/Laundry/Security/Maintenance) provided are done by designated in-house staff	
				ncern - E Clinical		
Standard E1.	The facility has established	The facility has defined purposed in Unique identification number is	procedures for	registration, cor	sultation and admission of patients.	
ME E1.1.	procedure for registration of patients	given to each patient during process of registration	2	RR		
		Patient demographic details are recorded in admission records	2	RR	Check for that patient demographics like Name, age, Sex, Address, Chief complaint, etc.	
ME E1.3.	There is established procedure for admission of patients	There is established criteria for admission through emergency department	2	SI/RR		
		There is establish procedure for admission of MLC cases as per prevalent laws	2	SI/RR		
		Admission is done by written order of a qualified doctor	2	SI/RR		
		There is no delay in treatment because of admission process	2	SI/RR		
		Time of admission is recorded in	2	RR		
		patient record There is no delay in transfer of patient to respective department once admission is confirmed	2	SI/RR		
		Emergency department is aware of admission criteria to critical care units	2	SI/RR	Like ICU, SNCU, Burn cases	
		Staff is aware of cases that can not be admitted at the facility due to constraint in scope of services	2	SI		

ME E1.4.	There is established procedure for managing patients, in case beds are not available at the facility	The is provision of extra beds, trolley beds in case of high occupancy or mass casualty	2	OB/SI		
Standard E2.		e facility has defined and established	procedures fo	or clinical assessn	nent, reassessment and treatment plan preparation	1.
ME E2.1.	There is established procedure for initial assessment of patients	Assessment criteria of different kind of medical emergencies is defined and practiced	2	SI/RR	Use of standard criteria of assessment like Glasgow comma scale, Poly trauma, MI, burn patient, paediatric patient, pain assessment criteria etc.	
		Initial assessment and treatment is provided immediately	2	OB/RR		
		Initial assessment is documented preferably within 2 hours	2	RR		
ME E2.2.	There is established procedure for follow-up/ reassessment of Patients	There is fixed schedule for reassessment of patient under observation	2	RR/SI		
		There is system in place to identify and manage the changes in Patient's health status	2	SI/RR	Criteria is defined for identification, and management of high risk patients/ patient whose condition is deteriorating	
		Check the treatment or care plan is modified as per re assessment results	2	SI/RR	Check the re assessment sheets/ Case sheets modified treatment plan or care plan is documented	
ME E2.3	There is established procedure to plan and deliver appropriate treatment or care to individual as per the needs to achieve best possible results	Check healthcare needs of all hospitalised patients are identified through assessment process	2	SI/RR	Assessment includes physical assessment, history, details of existing disease condition (if any) for which regular medication is taken as well as evaluate psychological, cultural, social factors	
		Check treatment/care plan is prepared as per patient's need	2	RR	(a) According to assessment and investigation findings (wherever applicable). (b) Check inputs are taken from patient or relevant care provider while preparing the care plan.	
		Check treatment / care plan is documented	2	RR	Care plan include:, investigation to be conducted, intervention to be provided, goals to achieve, timeframe, patient education, , discharge plan etc	
		Check care is delivered by competent multidisciplinary team	2	SI/RR	Check care plan is prepared and delivered as per direction of qualified physician	
Standard E3.	Facility has defined and established procedures for continuity of care of patient and referral					
ME E3.1.	Facility has established procedure for continuity of care during interdepartmental transfer	There is procedure for hand over for patient transfer from emergency to IPD /OT	2	SI/RR	Check for how hand over is given from emergency to ward, ICU, SNCU etc.	
		There is a procedure consultation of the patient to other specialist with in the hospital	2	SI/RR		
ME E3.2.	Facility provides appropriate referral linkages to the patients/Services for transfer to other/higher facilities to assure their continuity of care.	Patient referred with referral slip	2	SI/RR		
		Availability of referral linkages to	2	SI/RR	Check how patient are referred if services are not available	
		higher centres. Advance communication is done	2	SI/RR	not available	
		with higher centre		-		
		Referral vehicle is being arranged Referral in or referral out register is maintained	2	SI/RR RR		
		Check for if there is any system of follow up	2	RR	Check referral out record is maintained Check randomly with the referred cases (contact them) for completion of treatment or follow up.	
ME E3.3.	A person is identified for care during all steps of care	Doctor and nurse is designated for each patient admitted to emergency ward	2	SI/RR		
Standard E4.		The facility h	nas defined an	d established pro	ocedures for nursing care	

Procedure for identification of patients is established at the facility	There is a process for ensuring the identification before any clinical procedure	2	OB/SI	Patient id band/ verbal confirmation/Bed no. etc.	
Procedure for ensuring timely and accurate nursing care as per treatment plan is established at the facility	Treatment chart are maintained	2	RR	Check for treatment chart are updated and drugs given are marked. Co relate it with drugs and doses prescribed.	
	There is a process to ensure the accuracy of verbal/telephonic orders	2	SI/RR	(1) Check system is in place to give telephonic orders & practised (2) Verbal orders are verified by the ordering physician within defined time period	
There is established procedure of patient hand over, whenever staff duty change happens	Patient hand over is given during the change in the shift	2	SI/RR		
	Nursing Handover register is	2	RR		
		2	OB/SI		
	mana over is given bed side		00/31		
Nursing records are maintained	Nursing notes are maintained adequately	2	RR/SI	Check for nursing note register. Notes are adequately written	
There is procedure for periodic monitoring of patients	Patient Vitals are monitored and recorded periodically	2	RR/SI	Check for TPR chart, IO chart, any other vital required is monitored	
	Critical patients are monitored continually	2	RR/OB	Check for use of cardiac monitor/multi parameter	
		procedure to	identify high risk		
The facility identifies vulnerable patients and ensure their safe care	Vulnerable patients are identified and measures are taken to protect them from any harm	2	OB/SI	Unstable, irritable, unconscious. Psychotic and serious patients are identified	
The facility identifies high risk patients and ensure their care, as per their need	High risk medical emergencies are identified and treatment given on priority	2	OB/SI		
	Facility	ensures ratio	nale prescribing a		
Facility ensured that drugs are prescribed as per the prescription policy of ESIC	Check for BHT if drugs are prescribed as per the prescription policy	2	RR	Check for: 1. No. of medicines prescribed 2. High-end antibiotics are not prescribed 3. polypharmacy 4. Medicines are prescribed from EMI.	TO DISCUSS
There is procedure of rational use of drugs	Check for that relevant Standard treatment guideline are available at point of use	2	RR

	drug administration	dosages and timings .		·		
Standard E8.		Facility has defined and established p	rocedures for	maintaining, upda 	ating of patients' clinical records and their storage	
ME E8.1.	All the assessments, re- assessment and investigations are recorded and updated	Assessment findings are written on BHT	2	RR	Day to day progress of patient is recorded in BHT (Manually/e-records)	
ME E8.2.	All treatment plan prescription/orders are recorded in the patient records.	Treatment plan, first orders are written on BHT	2	RR	Treatment prescribed in nursing records	
ME E8.3.	Care provided to each patient is recorded in the patient records	Maintenance of treatment chart/treatment registers	2	RR	Treatment given is recorded in treatment chat	
ME E8.4.	Procedures performed are written on patients records	Any procedure performed written on BHT	2	RR	CPR, Dressing, mobilization etc	
ME E8.5.	Adequate form and formats are available at point of use	Availability of form formats for emergency	2	OB/SI	MLC,PIB, Lab /X-ray requisition, death certificate, Initial assessment format, referral slip etc.	
ME E8.6.	Register/records are maintained as per guidelines	Emergency Records are maintained	2	OB/RR	Emergency register, death register, MLC register, are maintained	
		All register/records are identified and numbered	2	OB/RR		
ME E8.7.	The facility ensures safe and adequate storage and retrieval of medical records	Safe keeping of MLC records	2	OB/SI		
Standard E9.		The facility has o	defined and es	tablished procedu	ures for discharge of patient.	
ME E9.1.	Discharge is done after assessing patient readiness	Assessment is done before discharging patient from emergency	2	SI/RR	See if there is any procedure/protocol for discharging the patient if the condition of patient improves in emergency itself. What is the procedure for discharge for short stay / day care patients	
		Discharge is done by a responsible and qualified doctor	2	SI/RR		
		Patient / attendants are consulted before discharge	2	Pi		
		Treating doctor is consulted/ informed before discharge of patients	2	SI/RR		
ME E9.2.	Case summary and follow-up instructions are provided at the discharge	Discharge summary is provided	2	RR/PI	See for discharge summary, referral slip provided.	
		Discharge summary adequately mentions patients clinical condition, treatment given and follow up	2	RR		
		Discharge summary is give to patients going in LAMA/Referral	2	SI/RR		
ME E9.3.	Counselling services are provided as during discharges wherever required	Counselling services are provided wherever it is required	2	SI/PI		
Standard E11.		The facility has defined and e	stablished pro	cedures for Emer	gency Services and Disaster Management	
ME E11.1.	There is procedure for Receiving and triage of patients	Emergency has a implemented system of sorting the patients	2	SI/OB	As care provider how they triage patient- immediate, delayed, expectant, minimal, dead	
		Triage area is marked	2	OB/SI		
		Triage protocols are displayed Responsibility of receiving and	2	OB		
		shifting the patient from vehicle is defined	2	SI		
ME E11.2.	Emergency protocols are defined and implemented	Emergency protocols are available at point of use	2	ОВ	See for protocols of head injury, snake bite, poisoning, drawing etc.	
		Staff is aware of Clinical protocols	2	SI/RR		
NAT SAA	The facility has disaster	There is procedure for CPR	2	SI/RR		
ME E11.3.	management plan in place	Lines of authority is defined	2	SI/RR		

		Procedure for internal communication defined	2	SI/RR		
		There is procedure for setting up control room	2	SI/RR		
		Disaster buffer stock of medicines and other supplies maintained	2	SI/RR		
		Role and responsibilities of staff in disaster is defined	2	SI/RR		
		Staff is aware of disaster plan	2	SI/RR		
ME E11.4.	The facility ensures adequate and timely availability of ambulances services and mobilisation of resources, as per requirement	Check for how ambulances are called and patient is shifted	2	SI/RR		
		Ambulances are equipped	2	ОВ		
		If the patient is stable then he is transferred in ambulance with the trained driver and one staff from hospital.	2	SI/RR		
		If the patient is serious (as decided by the Doctor), then trained driver and one paramedical staff is mandatory to accompany him.	2	SI/RR		
		The Patient's rights are respected during transport.	2	SI/RR		
		Ambulance appropriately equipped for BLS with trained personnel	2	OB/RR		
		There is a daily checklist of all equipment and emergency medications	2	RR		
		Ambulance has a log book for the maintenance of vehicle and daily vehicle checklist	2	RR		
		Transfer register is maintained to record the detail of the referred patient	2	RR		
ME E11.5.	There is procedure for handling medico legal cases	Medico legal cases are identified by on patient records	2	RR/SI		
		MLC cases are not delayed because of police proceedings	2	SI/OB/RR		
		There is procedure for informing police	2	SI/RR	Discharge is not done before police consent	
		Emergency has criteria for defining medico legal cases	2	SI/RR	Criteria is defined based on cases and when to do MLC	
Standard E12.			defined and	established proced	dures of diagnostic services	
ME E12.1.	There are established procedures for Pre-testing Activities	Container is labelled properly after the sample collection	2	ОВ		
ME E12.3.	There are established procedures for Post-testing Activities	Nursing station is provided with the critical value of different tests	2	SI/RR		
Standard E13.		The facility has defined and esta	ablished proce	edures for Blood B	ank/Storage Management and Transfusion.	
ME E13.8	There is established procedure for issuing blood	There is a procedure for issuing the blood promptly for life saving measures	2	RR/SI		
ME E13.9	There is established procedure for transfusion of blood	Consent is taken before transfusion	2	RR		
		Patient's identification is verified before transfusion	2	SI/OB		
		Blood is kept on optimum temperature before transfusion	2	RR		
		Blood transfusion is monitored and regulated by qualified person	2	SI/RR		
		Blood transfusion note is written in patient record	2	RR		
ME E13.10	There is a established procedure for monitoring and reporting Transfusion complication	Any major or minor transfusion reaction is recorded and reported to responsible person	2	RR		

Standard E15.		Facility has define	ed and establi	shed procedures o	of Operation Theatre Services	
ME E15.1.	Facility has established procedures OT Scheduling	There is procedure for emergency surgeries	2	SI/RR	See surgeon is available on call/on duty	
	procedures or senedaming	Procedure for arranging logistics	2	SI	Responsibilities are defined and patient is shifted	
Standard E16.			shed procedu	res for the manage	promptly ement of death & bodies of deceased patients

ME E2.3	There is established procedure to plan and deliver appropriate treatment or care to individual as per the needs to achieve best possible results	Check healthcare needs of all hospitalised patients are identified through assessment process	2	SI/RR	Assessment includes physical assessment, history, details of existing disease condition (if any) for which regular medication is taken as well as evaluate psychological ,cultural, social factors	
		Check treatment/care plan is prepared as per patient's need	2	RR	(a) According to assessment and investigation findings (wherever applicable). (b) Check inputs are taken from patient or relevant care provider while preparing the care plan.	
		Check treatment / care plan is documented	2	SI/RR	Care plan include:, investigation to be conducted, intervention to be provided, goals to achieve, timeframe, patient education, , discharge plan etc	
		Check care is delivered by competent multidisciplinary team	2		Check care plan is prepared and delivered as per direction of qualified physician	
Standard E3		The facility has defined and es	tablished procedure	s for continuity of care	of patient and referral	
ME E3.1	The facility has established procedure for continuity of care during interdepartmental transfer	There is procedure of handing over patient / new born from labour room to OT/ Ward/SNCU	2	SI/RR	Hand over from Labour Room to the destination department is given while shifting the Mother & Baby. Shifting to ward should be done at least two hours after delivery in case of conventional LR and 4 hours in case of LDR	
		There is a procedure for consultation of the patient to other specialist with in the hospital	2	SI/RR	check if there are linkages and established process for calling other specialist in labour room if required	
ME E3.2	The facility provides appropriate referral linkages to the patients/Services for transfer to other/higher facilities to assure the continuity of care.	Reason for referral is clearly stated and referral is authorized competent person (Gynaecologist or Medical Officer on duty)	2	RR	Verify with referral records that reasons for referral were clearly mentioned and rational. Referral is authorized by Gynaecologist or Medical officer on duty after ascertaining that case can not be managed at the facility Labour room staff confirms the suitability of referral with higher centres to ascertain that case can be managed at the managed at the referral with of the referral will not require further referrals	
		Essential information regarding referral facilities are available at labour room	2	RR/OB	Check for availability of following - Referral Pathway Names, Contact details and duty schedules for responsible persons higher referral centres Name, Contact details, duty schedule of Ambulance services	
		Advance communication regarding the patient's condition is shared with the higher centre	2	SI/RR	The information regarding the case, expected time of arrival and special facilities such as specialist, blood, intensive care may be required is communicated to the higher centre	
		Patient referred with referral slip	2	RR/SI	A referral slip/ Discharge card is provided to patient when referred to another health care facility. Referral slip includes demographic details, History of woman, examination findings, management done, drugs administered, any procedure done, reason for referral, detail of referral centre including whom to contact and signature of approving medical officer	
		Referral vehicle is being arranged	2	SI/RR	Check labour room staff facilitates arrangement of ambulance for transferring the patient to higher centre. Patient attendant are not asked to arrange vehicle by their own Check if labour room staff checks ambulance preparedness in terms of necessary equipment, drugs, accompanying staff in terms of care that may be remuired in transit	
		Referral checklist & Referral in/ Out register is maintained all referred cases	2	RR	Referral check list is filled before referral to ensure all necessary steps have been taken for safe referral including advance communication, transport arrangement, accompanying care provider, referral slip, time taken for referral etc. regarding referral cases including demographics, date & time of admission, date & time of referral, diagnosis at referral and follow up of outcome is recorded in referral register	
		Follow-up of referral cases is done	2	SI/RR	Check that labour room staff follow up of referred cases for timely arrival and appropriate care provided at higher centre. Outcome and deficiencies if any should be recorded in referral out register.	
ME E3.3	A person is identified for care during all steps of care	women	2	RR/SI	Check for nursing hand over	
Standard E4			defined and establish	hed procedures for nu	rsing care	
ME E4.1	Procedure for identification of patients is established at the facility	There is a process for ensuring the identification before any clinical procedure	2	OB/SI	Identification tags for mother and baby	
ME E4.2	Procedure for ensuring timely and accurate nursing care as per treatment plan is established at the facility	There is a process to ensure the accuracy of verbal/telephonic orders	2	SI/RR	Verbal orders are rechecked before administration. Verbal orders are documented in the case sheet	
ME E4.3	There is established procedure of patient hand over, whenever staff duty change happens	Patient hand over is given during the change in the shift	2	RR/SI	Nursing Handover register is maintained	
		Hand over is given bed side	2	SI/RR/OB	Handover is given during the shift change beside the pregnant women explaining the condition, care provided and any specific care if required	

ME E4.5	There is procedure for periodic monitoring of patients	Patient Vitals are monitored and recorded periodically	2	RR/SI	Check for BP, pulse,temp,Respiratory rate FHR,dilation Uterine Contractions, blood loss any other vital required is monitored and recoded in case sheet	
Standard E5 ME E5.1	The facility identifies vulnerable patients and ensure their safe care	Vulnerable patients are identified and measures are taken to protect them from any harm	2	high risk and vulnerab	Check the measure taken to prevent new born theft, sweeping and baby fall	
ME E5.2	The facility identifies high risk patients and ensure their care, as per their need	High Risk Pregnancy cases are identified and kept in intensive monitoring	2	OB/SI	List of cases identified as High Risk is available with labour room staff . Check for the frequency of observation: Its stage thalf an hour and 2nd stage: every 5 min	
Standard E6 ME E6.1	The facility ensured that drugs are prescribed in generic name only	Check for case sheet if drugs are prescribed under generic name only	2	RR	Check all the drugs in case sheet and discharge slip are written in generic name only.	
ME E6.2	There is procedure of rational use of drugs	Check for that relevant Standard treatment protocols are available at point of use	2	RR	Intrapartum care, Essential new-born care, Newborn Resuscitation, Pre- Eclampsia, Eclampsia, Postpartum haemorrhage, Obstructed Labour, Management of preterm labour	
		Check staff is aware of the drug regime and doses as per STG	2	SI/RR	Check BHT that drugs are prescribed as per treatment protocols &Check for rational use of uterotonic drugs	
Standard E7		The facility ha	s defined procedure	s for safe drug adminis	tration	
ME E7.1	There is process for identifying and cautious administration of high alert drugs	High alert drugs available in department are identified	2	SI/OB	Check high alert drugs such as Magsulf, Oxytocin, Carbopost, Adrenaline are identified in the labour room Value for maximum doses as per age,	
		Maximum dose of high alert drugs are defined and communicated & there is process to ensure that right doses of high alert drugs are only given	2	SI/RR	weight and diagnosis are available with nursing station and doctor. A system of independent double check before administration, Error prone medical abbreviations are avoided	
ME E7.2	Medication orders are written legibly and adequately	Every Medical advice and procedure is accompanied with date , time and signature	2	RR	Verify case sheets of sample basis	
		Check for the writing, It comprehendible by the clinical staff	2	RR/SI	Verify case sheets of sample basis	
ME E7.3	There is a procedure to check drug before administration/ dispensing	Drugs are checked for expiry and other inconsistency before administration	2	OB/SI	Check for any open single dose vial with left over content intended to be used later on. In multi dose vial needle is not left in the septum	
		Any adverse drug reaction is recorded and reported	2	RR/SI	Check if adverse drug reaction form is available in labour room and reporting is in practice	
ME E7.4	There is a system to ensure right medicine is given to right patient	Check Nursing staff is aware 7 Rs of Medication and follows them	2	SI/RR	Administration of medicines done after ensuring right patient, right drugs , right route, right time, Right dose , Right Reason and Right Documentation	
Standard E8	All the assessments, re-assessment and	The facility has defined and established pro-			nts' clinical records and their storage	
ME E8.1	investigations are recorded and updated All treatment plan prescription/orders	Progress of labour is recorded	2	RR	Partograph Medication order, treatment plan, lab	
ME E8.2	are recorded in the patient records.	Treatment prescribed in nursing records	2	RR	investigation are recoded adequately Outcome of delivery, date and time,	
ME E8.4	Procedures performed are written on patients records	Delivery note is adequate	2	RR	gestation age, delivery conducted by, type of delivery, complication if any indication of intervention, date and time of transfer, cause of death etc Did baby cry, Essential new born care,	
		Baby note is adequate	2	RR	resuscitation if any, Sex, weight, time of initiation of breast feed, birth doses, congenital anomaly if any.	
ME E8.5	Adequate form and formats are available at point of use	Standard Formats are available	2	RR/OB	Availability of standardized labour room case sheets including partograph and safe Birthing checklist Labour room register, OT register, MTP	
ME E8.6	Register/records are maintained as per guidelines	Registers and records are maintained as per guidelines	2	RR	register, Maternal death register and records, lab register, referral in /out register, internal & PPIUD register , NBCC register, handover register	
		All register/records are identified and numbered	2	RR	Check records are numbered and labelled legibly	
Standard E12	There are established as 1 1	The facility has def	ined and established	procedures of diagno	stic services	
ME E12.3	There are established procedures for Post-testing Activities	Nursing station is provided with the critical value of different test	2	SI/RR	Check for list of critical values is available at nursing station	
Standard E13 ME E13.9	There is established procedure for transfusion of blood	The facility has defined and establis Protocol of blood transfusion is monitored & regulated	hed procedures for 2	Blood Bank/Storage M	blood is kept on room temperature (28 degree C) before transfusion. Blood transfusion is monitored and regulated by	
Standard E16		The facility has defined and established	d procedures for the	management of death	qualified person & bodies of deceased patients	
ME E16.2					Maternal and neonatal death are recorded as per MDR guideline. Death note	
	The facility has standard procedures for handling the death in the hospital	neonatal death review guidelines	2	RR	including efforts done for resuscitation is noted in patient record. Death summary is given to patient attendant quoting the immediate cause and underlying cause if possible	
		neonatal death review guidelines There is established criteria for distinguishing between new-born death and still birth	2	SI/RR	including efforts done for resuscitation is noted in patient record. Death summany is given to patient attendant quoting the immediate cause and underlying cause if nossible. Every still birth is examined, classified by paediatrician before declaration & record is maintained.	
Standard E18		neonatal death review guidelines There is established criteria for distinguishing between new-born death and still birth	2		including efforts done for resuscitation is noted in patient record. 		Availability of antiseptic soap with soap dish/	2	OB/SI	supply is regular Check for availability/ Ask staff if the	
		liquid antiseptic with dispenser. Availability of Alcohol based Hand rub	2	OB/SI	supply is adequate and uninterrupted Check for availability/ Ask staff for	
		Display of Hand washing Instruction at Point	2	OB	regular supply. Prominently displayed above the hand washing facility , preferably in	
ME F2.2	The facility staff is trained in hand washing practices and they adhere to standard hand washing practices	of Use Adherence to 6 steps of Hand washing	2	SI/OB	Local language Ask of demonstration	
	The facility ensures standard	Staff aware of when to hand wash	2	SI		
ME F2.3	practices and materials for antisepsis		2	ОВ	like before giving IM/IV injection,	
Standard F3		The facility ensures standard	2 I practices and	OB/SI	drawing blood, putting Intravenous and urinary catheter	

ME F3.1	The facility ensures adequate personal protection Equipment as per requirements	Clean gloves are available at point of use	2	OB/SI		
		Availability of Masks	2	OB/SI		
ME F3.2	The facility staff adheres to standard personal protection practices	No reuse of disposable gloves, Masks, caps and aprons.	2	OB/SI		
		Compliance to correct method of wearing	2	SI		
Standard F4		and removing the gloves The facility has standard proces	lures for proces	sing of equipm	ent and instruments	
ME F4.1	The facility ensures standard practices and materials for decontamination and cleaning of instruments and procedures areas	Decontamination of operating & Procedure surfaces	2	SI/OB	Ask staff about how they decontaminate the procedure surface like Examination table , Patients Beds Stretcher/Trolleys etc. (Wiping with 0.5% Chlorine solution	
		Proper Decontamination of instruments after use	2	SI/OB	Ask staff how they decontaminate the instruments like Stethoscope, Dressing Instruments, Examination Instruments, Blood Pressure Cuff etc (Soaking in 0.5% Chlorine Solution, Wiping with 0.5% Chlorine Solution or 70% Alcohol as applicable	
		Contact time for decontamination is adequate	2	SI/OB	10 minutes	
		Cleaning of instruments after decontamination	2	SI/OB	Cleaning is done with detergent and running water after decontamination	
		Proper handling of Soiled and infected linen	2	SI/OB	No sorting ,Rinsing or sluicing at Point	
		Staff know how to make chlorine solution	2	SI/OB	of use/ Patient care area	
ME F4.2	The facility ensures standard practices and materials for disinfection and sterilization of instruments and equipment	Equipment and instruments are sterilized after each use as per requirement	2	OB/SI	Autoclaving/HLD/Chemical Sterilization	
		High level Disinfection of instruments/equipment is done as per protocol	2	OB/SI	Ask staff about method and time required for boiling	
		Autoclaved dressing material is used	2	OB/SI		
Standard F5	The facility encures quallability of	Physical layout and environmental con	troi oi the patie	nt care areas e	nsures injection prevention	
ME F5.2	The facility ensures availability of standard materials for cleaning and disinfection of patient care areas	Availability of disinfectant as per requirement	2	OB/SI	Chlorine solution, Glutaraldehyde, carbolic acid	
	The facility ensures standard	Availability of cleaning agent as per requirement	2	OB/SI	Hospital grade phenyl, disinfectant detergent solution	
ME F5.3	practices are followed for the cleaning and disinfection of patient care areas	Staff is trained for spill management	2	SI/RR		
		Cleaning of patient care area with detergent solution Staff is trained for preparing cleaning	2	SI/RR		
		solution as per standard procedure	2	SI/RR		
		Standard practice of mopping and scrubbing are followed	2	OB/SI	Unidirectional mopping from inside out	
		Cleaning equipment like broom are not used in patient care areas	2	OB/SI	Any cleaning equipment leading to dispersion of dust particles in air should be avoided	
ME F5.4	The facility ensures segregation	Isolation and barrier nursing procedure are followed for septic cases	2	OB/SI		
Standard F6		defined and established procedures for segre	gation, collectio	n, treatment a	nd disposal of Bio Medical and hazardo	us Waste.
ME F6.1	The facility Ensures segregation of Bio Medical Waste as per guidelines and 'on-site' management of waste is carried out as per guidelines	Availability of colour coded bins at point of waste generation	2	ОВ	Adequate number. Covered. Foot operated.	
		Availability of colour coded non chlorinated plastic bags	2	ОВ		
		Segregation of Anatomical and soiled waste in Yellow Bin	2	OB/SI	Human Anatomical waste, Items contaminated with blood, body fluids, dressings, plaster casts, cotton swabs and bags containing residual or discarded blood and blood components.	
		Segregation of infected plastic waste in red bin	2	ОВ	Items such as tubing, bottles, intravenous tubes and sets, catheters, urine bags, syringes (without needles and fixed needle syringes) and vacutainers' with their needles cut) and gloves	
		Display of work instructions for segregation and handling of Biomedical waste	2	ОВ	Pictorial and in local language	
		There is no mixing of infectious and general waste	2	ОВ		
ME F6.2	The facility ensures management of sharps as per guidelines	Availability of functional needle cutters	2	ОВ	See if it has been used or just lying idle.	
		Segregation of sharps waste including Metals in white (translucent) Puncture proof, Leak proof, tamper proof containers	2	ОВ	Should be available nears the point of generation. Needles, syringes with fixed needles, needles from needle tip cutter or burner, scalpels, blades, or any other contaminated sharp object that may cause puncture and cuts. This includes both used, discarded and contaminated metal sharps	

		Availability of post exposure prophylaxis	2	SI/OB	Ask if available. Where it is stored and who is in charge of that.	
		Staff knows what to do in condition of needle stick injury	2	SI	Staff knows what to do in case of shape injury. Whom to report. See if any reporting has been done	
		Contaminated and broken Glass are disposed in puncture proof and leak proof box/ container with Blue colour marking	2	ОВ	Vials, slides and other broken infected glass	
ME F6.3	The facility ensures transportation and disposal of waste as per	Check bins are not overfilled	2	SI/OB		
	guidelines	Transportation of bio medical waste is done	2			
		in close container/trolley Staff is aware of mercury spill management	2	SI/RR	Look for: 1. Spill area evacuation 2. Removal of Jewellery 3. Wear PPE 4. Use of flashlight to locate mercury beads 5. Use syringe without a needle/eyedropper and sticky tape to suck the beads 6. Collection of beads in leak-proof bag or container 7. Sprinkle sulphur or zinc powder to remove any remaining mercury 8. All the mercury spill surfaces should be decontaminated with 10% sodium thiosulfate solution 9. All the bags or containers contamining terms contaminated with

ME G7.1					DELETED	
ME G7.2					DELETED	
Standards G9	Faci	lity has established procedures for assessing, r	eporting, evalu	ating and mana	ging risk as per Risk Management Plan	
ME G9.6	Periodic assessment for Medication and Patient care safety risks is done as per defined criteria.	Check periodic assessment of medication and patient care safety risk is done using defined checklist periodically	2	SI/RR	Verify with the records. A comprehensive risk assessment of all clinical processes should be done using pre define criteria at least once in three month.	
ME G9.7	Periodic assessment for potential risk regarding safety and security of staff including violence against service providers is done as per defined criteria	SaQushal assessment toolkit is used for safety audits.	2	SI/RR	Check that the filled checklist and action taken report are available Staff is aware of key gaps & closure status	
ME G9.8	Risks identified are analysed evaluated and rated for severity	Identified risks are analysed for severity	2	SI/RR	Action is taken to mitigate the risks	
Standard G10	т	he facility has established clinical Governance	framework to i	nprove quality	and safety of clinical care processes	
ME G10.3	Clinical care assessment criteria have been defined and communicated	The facility has established process to review the clinical care	2	SI/RR	Check parameter are defined & implemented to review the clinical care i.e. through Ward round, peer review, morbidity & mortality review, patient feedback, clinical audit & clinical outcomes.	
		Check regular ward rounds are taken to review case progress	2	SI/RR	(1) Both critical and stable patients (2) Check the case progress is documented in BHT/ progress notes-	
		Check the patient /family participate in the care evaluation	2	SI/RR	Feedback is taken from patient/family on health status of individual under treatment	
		Check the care planning and co- ordination is reviewed	2	SI/RR	System in place to review internal referral process, review clinical handover information, review patient understanding about their progress	
ME G10.4	Facility conducts the periodic clinical audits including prescription, medical and death audits	There is procedure to conduct medical audits	2	SI/RR	Check medical audit records (a) Completion of the medical records i.e. Medical history, assessments, re assessment, investigations conducted, progress notes, interventions conducted, outcome of the case, patient education, delineation of responsibilities, discharge etc. (b) Check whether treatment plan worked for the patient (C) progress on the health status of	
					(d) progress of the fleath status of the patient is mentioned (d) whether the goals defined in treatment plan is met for the individual cases	

		There is procedure to conduct prescription audits	2	SI/RR	(1) Random prescriptions are audited (2) Separate Prescription audit is conducted foe both OPD & IPD cases (3) The finding of audit is circulated to all concerned (4) Regular trends are analysis and presented in Clinical Governance board/Grand round meetings	
		All non compliance are enumerated recorded for medical audits	2	SI/RR	Check the non compliances are presented & discussed during clinical Governance meetings	
		All non compliance are enumerated recorded for death audits	2	SI/RR	Check the non compliances are presented & discussed during clinical Governance meetings	
		All non compliance are enumerated recorded for prescription audits	2	SI/RR	Check the non compliances are presented & discussed during clinical Governance meetings	
ME G10.5	Clinical care audits data is analysed, and actions are taken to close the gaps identified during the audit process	Check action plans are prepared and implemented as per medical audit record findings	2	SI/RR	Randomly check the actual compliance with the actions taken reports of last 3 months	
		Check action plans are prepared and implemented as per death audit record's findings	2	SI/RR	Randomly check the actual compliance with the actions taken reports of last 3 months	
		Check action plans are prepared and implemented as per prescription audit record findings	2	SI/RR	Randomly check the actual compliance with the actions taken reports of last 3 months	
		Check the data of audit findings are collated	2	SI/RR	Check collected data is analysed & areas for improvement is identified & prioritised	
		Check PDCA or revalent quality method is used to address critical problems	2	SI/RR	Check the critical problems are regularly monitored & applicable solutions are duplicated in other departments (wherever required) for process improvement	
ME G10.7	Facility ensures easy access and use of standard treatment guidelines & implementation tools at point of care	Check standard treatment guidelines / protocols are available & followed.	2	SI/RR	Staff is aware of Standard treatment protocols/ guidelines/best practices	
		Check treatment plan is prepared as per Standard treatment guidelines	2	SI/RR	Check staff adhere to clinical protocols while preparing the treatment plan	
		Check the drugs are prescribed as per Standards treatment guidelines	2	SI/RR	Check the drugs prescribed are available in EML or part of drug formulary	
		Check the updated/latest evidence are available	2	SI/RR	Check when the STG/protocols/evidences used in healthcare facility are published. Whether the STG protocols are according to current evidences.	
		Check the mapping of existing clinical practices processess is done	2	SI/RR	The gaps in clinical practices are identified & action are taken to improve it. Look for evidences for improvement in clinical practices using PDCA

		A selection of a second second second second second		SI (OR	Describes of health	1
		Availability of promotion services of overall growth and development of children	2	SI/OB	Provision of health education, health & nutrition counselling	
Standard A3			Facility Provides	diagnostic Service	25	
ME A3.1	The facility provides Radiology Services	Availability of Functional Radiology Services	2	SI/OB	Hassle free diagnostic services are available for paediatric cases	
ME A3.2	The facility Provides Laboratory Services	Availability of functional laboratory services	2	SI/OB	Availability of a dedicated Lab technician for sample collection	
Standard A4		Facility provides sen	_	national Health	of paediatric cases Programs/ state scheme	
ME A4.12	The facility provides services as per Rashtriya Bal	Screening and early detection of 4 Ds	2	SI/RR	DELETED	
	Swasthya Karykram					
Standard A5 ME A5.3	The facility provides security services	Availability of security services	Facility provides	support services SI/OB	Dedicated staff for paediatric OPD	
ME A5.4	The facility provides housekeeping services	Availability of Housekeeping services	2	SI/OB	Dedicated staff for paediatric OPD	
ME A5.6	The facility provides pharmacy services	Availability of drug storage and dispensing services	2	SI/OB	Dedicated drug dispensing counter for paediatric OPD	
Standard A6 ME A6.1		Health services pr	ovided at the facility		to community needs.	
WIE AO.1	The facility provides curatives & preventive services for the health problems and diseases,	Special Clinics are available for local prevalent diseases/ endemics	2	SI/OB	Ask for the specific local health problems/ diseases .i.e. arsenic	
	prevalent locally.		_		poisoning, endosulfane, hameophilia, Acute encephalitis Syndrome (AES) in children, followup for Birth defects etc.	
		F-III		- B Patient Right		
Standard B1 ME B1.1	The facility has uniform and user-friendly	Availability of departmental & directional signages	2 2	OB OB	ut the available services and their modalities 1. Numbering, main department and internal sectional signage	
	signage system				are placed. 2. Directional signages are available clearly indicating the paediatric OPD and its ancillary areas vis a vis counselling room, immunization room, breastfeeding corner, lab etc.	
		Display of layout/floor directory	2	OB	The layout should indicate the paediatric services vis a vis examination room, consultation room, immunisation, IYCF counselling, drugs dispensing, lab, imaging, emergency, SNCU, paediatric wards etc very clearly	
ME B1.2	The facility displays the services and entitlements available in its departments	Information regarding services are displayed	2	OB	List of available Paediatric OPD Clinic/s Timing for OPD (opening and closing) Important numbers like ambulance, blood bank etc A. Turn around time for investigation, S, grievance re addressal are displayed.	
		Names of doctor on duty is displayed and updated	2	ОВ	Name of doctor, Nurse and Counsellor on duty are displayed and updated.	
		Entitlement under JSSK , RBSK, PMJAY and other schemes are displayed	2	ОВ	Relevant national or state guidelines are followed for provision of diagnostics, drugs, treatment of children.	
ME B1.3	The facility has established citizen charter, which is followed at all levels	Display of citizen charter in OPD complex	2	OB	Consequence of the Consequence of Co	
ME B1.5				ОВ	Breastfeeding, Immunization schedule, Management of	
	Patients & visitors are sensitised and educated through appropriate IEC / BCC approaches	IEC Material is displayed	2	ОВ	diarrhoea using Zn & ORS, nutrition requirement of children, KMC and hand washing etc	
		Education material for counselling are available in Counselling room	2		Education material, job aids, dolls, mama's breasts model etc are available for lactation and nutrition Counselling	
		No display of poster/ placards/ pamphlets/videos in any part of the Health facility for the promotion of breast milk substitute, feeding bottles, teats or any product as mentioned under IMS Act	2	ОВ	Check in Immunization, paediatric OPDs , waiting areas etc.	
		No display of items and logos of companies that produce breast milk substitute, feeding bottles, teats or any product as mentioned under IMS Act	2	OB	Check in Immunization, paediatric OPDs , waiting areas etc. Check staff is not using pen, note pad, pen stand etc. which have logos of companies' producing breast milk substitute etc.	
		No information, counselling and educational material is provided to mothers and families on Formula Feed	2	OB	During counselling Mothers and families has been specially educated about III effects of breast milk substitutes.	
ME B1.6	Information is available in local language and easy to understand	Signages and information are available in local language	2	ОВ	Check all information are available in local language	
ME B1.7 ME B1.8	The facility ensures access to clinical records of			RR/OB	DELETED	Commom help desk centre availble
	patients to entitled personnel	OPD slip with UID is given to the patient	2			
Standard B2 ME B2.1	Services are delivered	in a manner that is sensitive to gender, religi	ous and cultural nee	ds, and there are	no barrier on account of physical economic, cultura 1. Due care is taken in examining older female child (she should	or social reasons.
	Services are provided in manner that are sensitive to gender	Availability of female staff if a male doctor examines a female patient	2	ОВ	be examined in the presence of a parent/ relative or a female staff. 2. Examination of mother for lactation support is also provided ensuring complete privacy and dignity	
		Separate toilets for male and female	2	ОВ	Separate toilets for parent accompanying the children/attendant	
ME B2.3	Access to facility is provided without any physical barrier and friendly to people with		2	OB	Facility takes effort to ensure hassle free registration. Have dedicated counter/ separate counter in centralized OPD registration (provision of dedicated one for school going	
	physical barrier and friendly to people with disabilities	Dedicated registration counter for paediatric cases	2	ОВ	registration (provision of dedicated que for school going children) Check computerised registration, token system for queuing and patient calling	
		Registration to drug processes are hassle free. Availability of Wheel chair or stretcher for easy Access to the OPD	2	ОВ	system with electronic display are available to systematise outpatient consultation. Dedicated wheelchair /stretchers are available for paediatric	
		the OPD Availability of ramps with railing	2	OB	patients. At least 120 cm width, gradient not steeper than 1:12	
				OB	Wide , placed at lower level, supported with bars & door of	
		Availability of differently abled toilet	2	35	toilet is opening outside	
Standard B3		Facility maintains the privacy, confidential	ity & Dignity of pati		stem for guarding patients related information	
ME B3.1	Adequate visual privacy is provided at every point of care	Availability of screen/curtain at Examination Area	2	ОВ	Curtain/screen are available in examination area	
	point of care	Availability of screen/curtain at breastfeeding corner	2	OB	(1) Secondary curtain/ screen is used to create a visual barrier in breastfeeding area (2) Curtains/frosted glasses at windows for maintaining privacy	
		One Patient is seen at a time in clinics	2	OB OB	Only patient and the parent- attendant are permitted inside the clinic Privacy (verbal and visual) of mother/parent is ensured while	
ME B3.2	Confidentiality of patients records and clinical information is maintained	Privacy at the counselling room is maintained Records are placed at secure place beyond access to general staff and visitor	2	SI/OB	providing counselling services 1. No information regarding patient / parent identity is displayed 2. Records are not shared with anybody without written permission of parents & appropriate hospital authorities	
ME B3.3	The facility ensures the behaviours of staff is dignified and respectful, while delivering the	Behaviour of staff is empathetic and courteous	2	PI/OB	Check staff is not providing care in undignified manner such as yelling, scolding, shouting and using abusive language for	
ME B3.4	services The facility ensures privacy and confidentiality to every patient, especially of those conditions having social stigma, and also safeguards	Privacy and confidentiality of health conditions having social stigma are maintained	2	PI/OB	patient or parent-attendant Check if HIV/leprosy/abuse case etc is not explicitly written on case sheets/s/lips and avoiding any means by which they can be identified in public	
Standard B4	vulnerable groups Facility has defined and estal	plished procedures for informing patients abou	t the medical condi		 g them in treatment planning, and facilitate informe	ed decision making patient.
ME B4.1	There is established procedures for taking informed consent before treatment and procedures	Informed consent is taken from parent/guardian before any investigation	2	RR /PI	Explained about the whole process	
ME B4.2	Patient is informed about his/her rights and responsibilities	Display of patient rights and responsibilities.	2	ОВ	Patient 's rights & responsibilities are displayed (may be shared with main hospital)	
ME B4.4	Information about the treatment is shared with	Parent- attendant is informed about the clinical	2	PI	Ask parent attendants/guardians about what they have been	
	Information about the treatment is shared with patients or attendants, regularly	condition and treatment been provided	2		communicated about the clinical condition and treatment plan .	

		Pre and Post procedure counselling is given	2	PI/RR	Parent attendant/guardians are counselled before conducting a test, imaging, immunisation or any procedure. Ask parents if	
ME B4.5			_	OB	they have been counselled about the process and requirement. check the completeness of the Grievance redressal mechanism,	
	The facility has defined and established grievance redressal system in place	Availability of complaint box and display of process for grievance redressal and whom to contact is displayed	2		from complaint registration till its resolution ial protection given from cost of hospital services.

Who can issue certificates 3. Formats which shall used 4. Record keeping of issued certificate procedures for issuing duplicate certificates 5. Check turn around time to issue certificate	
		Check hospital has documented policy for issuing disability certificates under RBSK	2	RR/PI	Check for policy Chock can issue certificates Formats which shall used Record keeping of issued certificate procedures for issuing duplicate certificates Check turn around time to issue certificate	
			Area of Cond	cern - C Inputs		
Standard C1 ME C1.1	Departments have adequate space as per patient	Clinic has adequate space for consultation and		OB	a. Adequate Space in Clinic, ample space to seat 4-5 people	
	or work load	examination	2		b. The room has handwashing facility .	
		Availability of adequate waiting area	2	ОВ	a. Waiting area has adequate space and is adjacent or close to the paediatric clinic b. check ambience of the waiting area is child friendly vis a vis cartoon/animals/flowers painting on the wall, child play zone with safe toys, puzzles, blocks, stacking bottle tops and swings.	
ME C1.2	Patient amenities are provide as per patient load	Availability of seating arrangement in waiting area	2	ОВ	a. As per average OPD at peak time b. separate , movable, safe and comfortable chairs for children are available	
		Availability of sub waiting for separate clinics	2	ОВ	Separate seating arrangement for immunisation , IYCF Counselling centre, etc.	
		Availability of Drinking water Functional toilets with running water and flush are	2	OB OB	See if water cooler is easily accessible to the visitors Two WC and a washbasin should be reserved for children	
		available	2		visiting the OPD and fitted accordingly (low WC seats; washbasins at appropriate height, lever operated taps).	
ME C1.3	Departments have layout and demarcated areas as per functions	Dedicated examination area is provided with each clinics	2	ОВ	Examination table along with foot steps	
		Demarcated area for the assessment and examination of medico-legal cases	2	ОВ	Such as rape/sexual assault survivors in OPD / Linkage with emergency	
		Demarcated dressing area /room & injection room	2	ОВ	Can be shared with main OPD	
		Dedicated IYCF Counselling Centre	2	ОВ	Check availability of IYCF room	
		Dedicated immunization room for children OPD has separate entry and exit from IPD and	2	OB OB		
		Emergency Availability of clean and dirty utility room	2	ОВ		
		Demarcated Drug dispensing counter for paediatric patients	2	OB OB	Separate pharmacy/ Separate dispensing counter at OPD pharmacy TB clinic, isolation room, radiology etc.	
		Check paediatric complex/services are away from isolation and restricted areas	2	OB	Available separately for children	
ME C1.4	The facility has adequate circulation area and open spaces according to need and local law	Demarcated trolley/wheelchair bay Corridors at OPD are broad enough to manage stretcher and trolleys	2	OB	Corridor should be wide enough so that 2 stretchers can pass simultaneously	
ME C1.5	The facility has infrastructure for intramural and extramural communication	Availability of functional telephone and Intercom Services in clinics	2	ОВ	Check availability of functional telephone and intercom connections	
ME C1.7	The facility and departments are planned to ensure structure follows the function/processes (Structure commensurate with the function of the hospital)	Unidirectional flow of services	2	OB	Layout of OPD shall follow functional flow of the patients, e.g.: Enquiry->Registration→Waiting→>Sub-waiting→>Clinic→Dressing room/Injection Room/immunisation→Dlagnostics (lab/X-ray)→Pharmacy→Exit	
		All clinics and related auxiliary services are co located in one functional area	2	OB	Paediatric OPD clinic, emergency, immunisation room, IYCF counselling centre, Pharmacy/drug dispensing counter and any other	
Standard C2			ty ensures the physic			
ME C2.1	The facility ensures the seismic safety of the infrastructure	Non structural components are properly secured	2	ОВ	Check for fixtures and furniture like cupboards, cabinets, and heavy equipment , hanging objects are properly fastened and	
ME C2.3	The facility ensures safety of electrical establishment	OPD building does not have temporary connections and loosely hanging wires	2	OB	secured a. Switch Boards other electrical installations are intact. B. Check adequate power outlets have been provided as per requirement of electric appliances and	
ME C2.4	Physical condition of buildings are safe for	Floors of the department is non slippery and even	2	ОВ	c. Electrical points are out of reach of children / covered	
	providing patient care	Paediatric OPD is safe and secure	2	ОВ	Open spaces are properly secured to prevent fall and injury	
		Windows have grills and wire meshwork	2 established Program	OB	and other disaster	
Standard C3 ME C3.1	The facility has plan for prevention of fire	OPD has sufficient fire exit to permit safe escape to its occupant at time of fire	2	OB	Check the fire exits are clearly visible and routes to reach exit are clearly marked. Check there is no obstruction in the route of fire exits. Staff is aware of assembly points.	
ME C3.2	The facility has adequate fire fighting Equipment	OPD has installed fire Extinguisher that is Class A , Class B, C type or ABC type	2	OB	Check the expiry date for fire extinguishers are displayed as well as due date for next refilling is clearly mentioned.	
ME C3.3	The facility has a system of periodic training of staff and conducts mock drills regularly for fire	Check for staff competencies for operating fire extinguisher and what to do in case of fire	2	SI/RR	Staff is aware of RACE (Rescue, Alarm, Confine & Extinguish) & PASS (Pull, Aim, Squeeze & Sweep)	
Standard C4	and other disaster situation	The facility has adequate qualified and t	trained staff, require		he assured services to the current case load	
ME C4.1	The facility has adequate specialist doctors as per service provision	Availability of paediatric specialist at OPD time	2	OB/RR	a. As per patient load b. 1 for every 50-60 cases;	
ME C4.2	The facility has adequate general duty doctors as per service provision and work load	Availability of General duty doctor	2	OB/RR	c. Check for specialist are available at scheduled time a. As per patient load b. Trained in paediatric	
		Availability of Dentist	2	OB/RR	As per patient load	
ME C4.3	The facility has adequate nursing staff as per service provision and work load	Availability of Nursing staff	2	OB/RR/SI	As per patient load At Injection room, OPD Clinics, immunisation room, IYCF	
ME C4.4	The facility has adequate technicians/paramedics as per requirement	Availability of paramedical staff		OB/SI	Counselling room DEIC as Per Requirement 1 with each doctor where children are weighed & weight is correctly recorded, immunisation status is checked, children	
			2		c five years are screened for SAM using MUAC, and those with emergency and priority signs are triaged. Check dedicated staff is also available with IYCF counselling centre	
		Availability of staff for lab	2	SI/RR	A dedicated Lab technician for sample collection of paediatric cases	
		Availability of Nutrition Counsellor	2	SI/RR	A Nutrition Counsellor/IYCF counsellor is appointed to manage this centre and is available for fixed	
		Availability of technician/ Assistant	-	SI/RR	hours (coinciding with timing of outpatient services) to counsel and address referral cases. Audiometrician, Ophthalmic assistant, Dental technician (As per

ME D11.2	The facility has a established procedure for duty roster and deputation to different departments	There is procedure to ensure that staff is available on duty as per duty roster	2	RR/SI	Check for system of recording time of reporting and relieving (Attendance register/ Biometrics etc)	
ME D11.3	The facility ensures the adherence to dress code as mandated by its administration / the health department	There is designated in charge for department Doctor, nursing staff and support staff adhere to their respective dress code	2	SI OB	As per hospital administration or state policy	
Standard D12 ME D12.1	There is established system for contract management for out sourced services	There is procedure to monitor the quality and adequacy of outsourced services on regular basis	2	SI/RR	vices and adheres to contractual obligations Verification of outsourced services (cleaning/Laundry/Security/Maintenance) provided are done by designated in-house staff	
Standard E1		The facility has defined p	 Area of Concern - ocedures for registr 	E Clinical Service ation, consultati	s on and admission of patients.	
ME E1.1	The facility has established procedure for registration of patients	Unique identification number & patient demographic records are generated during process of registration & admission	2	RR	Check for patient demographics like baby Name, father's/mother's name , age, Sex, Chief complaint, etc. are clearly recorded	
		Patients are directed to relevant clinic by registration clerk Registration clerk is aware of categories of the patient exempted from user charges	2	PI/SI SI/RR	Registration clerk are well versed with hospital processes and lay out JSSK, RBSK, ABPMJAY, BPL or any other state specific schemes	
ME E1.2	The facility has a established procedure for OPD consultation	There is procedure for systematic calling of patients one by one	2	OB	Patient is called by Doctor/attendant as per his/her turn on the basis of "first come first examine" basis. However, in case of emergency out of turn consultation is provided.	
		Patient History is taken and recorded Physical Examination is done and recorded wherever required	2	RR OB/RR	Check OPD records for the same Check details of the physical examination, provisional diagnosis and investigations (if any) is mentioned in the OPD ticket	
		Check OPD records for the treatment plan	2	OB/RR	Check treatment plan and confirmed diagnosis is recorded	
		No Patient is Consulted in Standing Position	2	ОВ	Proper seating arrangement for the patient and parent- attendant is there. Care is provided in a dignified way.	
		Clinical staff is not engaged in administrative work	2	OB/SI	During OPD hours clinical staff is not engaged in other administrative tasks	
ME E1.3	There is established procedure for admission of patients	There is establish procedure for admission through OPD There is establish procedure for day care admission	2	SI/RR SI/RR	Check the linkage between OPD, emergency and IPD services. Staff is aware about linkage and no time is wasted in the admission process. Patients requiring day care services receive the care hassle free	
Standard E2			2 procedures for clinic		assessment and treatment plan preparation.	
ME E2.1	There is established procedure for initial assessment of patients	There is screening clinic for initial assessment of the patients	2	ОВ	Initial screening is done for all paediatric patients. They are weighed & weight is correctly recorded, immunisation status is checked, children < five years are screened for SAM using MUAC and those with emergency and priority signs are triaged.	
ME E2.2	There is established procedure for follow-up/ reassessment of Patients	Procedure for follow up of patients	2	OB/RR	Patients (inborn and out born) are followed up for nutritional status and the completion of the treatment & immunisation. Provisioning for follow up at lower level healthcare facilities vis a vis CHC, PHC and HWC.	
		There is fixed schedule for reassessment of patient under observation	2	SI/RR		
		There is system in place to identify and manage the changes in Patient's health status	2	SI/RR	Criteria is defined for identification, and management of high risk patients/ patient whose condition is deteriorating	
		Check the treatment or care plan is modified as per re assessment results	2	SI/RR SI/RR	Check the re assessment sheets/ Case sheets modified treatment plan or care plan is documented	
ME E2.3	There is established procedure to plan and deliver appropriate treatment or care to individual as per the needs to achieve best possible results	Check treatment/care plan is prepared as per patient's need	2	27	(a) According to assessment and investigation findings (wherever applicable). (b) Check inputs are taken from patient or relvent care provider while preparing the care plan.	
		Check treatment / care plan is documented	2	RR	Care plan include:, investigation to be conducted, intervention to be provided, goals to achieve, timeframe, patient education, ,	
		Check care is delivered by competent multidisciplinary	2	RR	discharge plan etc Check care plan is prepared and delivered as per direction of

ME D1.3	Operating and maintenance instructions are available with the users of equipment	Up to date instructions for operation and maintenance of equipment are readily available with SNCU staff.	2	OB/SI	Check operating and trouble shooting instructions of equipment are available in SNCU	
Standard D2 ME D2.1	There is established procedure for forecasting and	There is established system of timely indenting of	torage, inventory m	nanagement and dispensin	g of medicines in pharmacy and patient care are Stock level are daily updated	eas eas
	indenting drugs and consumables	consumables and drugs Drugs are indented & supplied in Paediatric dosages	2	OB/RR/SI	Requisition are timely placed well before reaching the stock out level. Check with stock and indent registers.	
ME D2.3	The facility ensures proper storage of drugs and	only Drugs are stored in containers/tray/crash cart and are	2	OB/RR/SI OB	Check drugs are available in paediatric doses/formulation Check drugs and consumables are kept at allocated space in	
	consumables	labelled Empty and filled cylinders are labelled and updated	2	OB	Crash cart/ Drug trolleys and are labelled. Look alike and sound alike drugs are kept separately Empty and filled cylinders are kept separately and labelled,	
ME D2.4	The facility ensures management of expiry and	Expiry and near expiry dates are maintained	2	OB/RR	flow meter is working and pressure/ flow rate is updated in the checklist	
	near expiry drugs	No expiry drug found	2	OB/RR	Records for expiry and near expiry drugs are maintained for emergency tray and drug stored at department In SNCU sub store as well as drug/emergency trays	
ME D2.5	The facility has established procedure for inventory management techniques	There is practice of calculating and maintaining buffer stock	2	SI/RR	At least once in a week- minimum buffer stock is maintained. Minimum stock and reorder level are calculated based on consumption in a week accordingly	
		Department maintained stock and expenditure register of drugs and consumables	2	RR	Check stock and expenditure register is adequately maintained	
ME D2.6	There is a procedure for periodically replenishing the drugs in patient care areas	There is procedure for replenishing drug tray /crash cart	2	SI/RR	There is no stock out of drugs and Procedure for replenishing drug in place	
ME D2.7	There is process for storage of vaccines and other drugs, requiring controlled temperature	Temperature of refrigerators are kept as per storage requirement and records are maintained	2	OB/RR	Check for temperature charts are maintained and updated periodically. Refrigerators meant for storing drugs should not be used for storing other items such as eatables	
Standard D3 ME D3.1	The facility provides adequate illumination level at		es safe, secure and o	comfortable environment	to staff, patients and visitors.	
ME D3.1	patient care areas	Adequate Illumination patient care unit & nursing station	2	US	200 Lux at the plane of infant bed, Ambient lightening at least 50 to more than 600 Lux. Illumination level at nursing station- 150-300 Lux Light source is glare free or veiling reflections	
ME D3.2	The facility has provision of restriction of visitors in patient areas		2	OB/SI	(1) One trained female family member allowed to stay with the new born in step down after undertaking all universal precaution measures like bathing, wearing gowns, mask, head cap etc. (2) Entry to SNCU is restricted,	
ME D3.3	The facility ensures safe and comfortable environment for patients and service providers	Visitor policy is defined & implemented SNCU has system to control temperature and humidity and record of same is maintained	2		(2) Entry to SNCU is restricted, (3) Visiting hour are fixed and practiced Temperature inside main SNCU should be maintained at	
			*	SI/RR	(28+/- 2 ^o C), round O clock preferably by thermostatic control. Relative humidity of 30-60% should be maintained Each equipment used should have servo controlled devices	
		SNCU has procedure to check the temperature of radiant warmer ,phototherapy units, baby incubators etc.	2	SI/RR	for heat control with cut off to limit increase in temperature of radiant warmers beyond a certain temperature or warning mechanism for sounding alert/alarm when temp increases beyond certain limits	
		SNCU has system to control & monitor sound level	2	SI/RR	Control the sound producing activities and gadgets (like telephone sounds, staff area and equipment). Should not keep beeping at high volume (Not more than 45 db and peak intensity should not be more than 80 db)	
ME D3.4	The facility has security system in place at patient	SNCU has system of switching off light when not performing any activity /at night	2	OB OB/RR	There is procedure for handing over the baby to	
	care areas	New born identification band and foot prints are used	2	OB	mother/father/Legal Guardian Restriction Signage, security guard in each shift, functional CCTV camera, define & practice procedure for handing over the baby to mother/father	
ME D3.5	The facility has established measure for safety and security of female staff	Check security arrangement at SNCU are robust Ask female staff whether they feel secure at work place	2	SI		
Standard D4 ME D4.1		The facility h. Interior & exterior of patient care areas are plastered &	as established Progr	ramme for maintenance ar	nd upkeep of the facility Wall and Ceiling of SNCU is painted and made of white wall	
ME D4.2	appropriately	painted & building are white washed in uniform colour Walls & sinks are cleaned as per schedule	2	OB	tiles, with seamless joint, and extending up to the ceiling. (1) At least once a day	
		Mopping of SNCU is done as per schedule	2	OB/ RR	(2) With hospital grade disinfectant (1) At least 3 times in a day	
		Floors, walls, roof, roof tops, sinks patient care and circulation areas are Clean Toilets are clean with functional flush and running water	2	OB OB	All area are clean with no dirt,grease,littering and cobwebs. Surface of furniture and fixtures are clean Check toilet seats, floors, basins etc are clean and water	
ME D4.3	Hospital infrastructure is adequately maintained	Check for there is no seepage , Cracks, chipping of	2	OB	supply with functional cistern has been provided. Check for patient care as well as auxiliary areas	
WIE 04.3	nospital infrastructure is adequately maintained	plaster	2	OB OB	Check for patient care as well as auxiliary areas	
ME D4.5	The facility has policy of removal of condemned junk material	Window panes , doors and other fixtures are intact No condemned/Junk material in the SNCU	2	OB	Check for any obsolete article including equipment, instrument, records, drugs and consumables	
ME D4.6	The facility has established procedures for pest, rodent and animal control	No stray animal/rodent/birds	2	OB	No lizard, cockroach, mosquito, flies, rats, bird nest etc.	
Standard DS ME DS.1	and supply for portable water in all functional	The facility ensures 24X7 water Availability of 24x7 running and potable water	r and power backup	oas per requirement of ser OB/SI	vice delivery, and support services norms Availability of 24X7 Running water & hot water facility.	
ME D5.2	areas The facility ensures adequate power backup in all patient care areas as per load	Availability of power back up in patient care areas	2	OB/SI	Check for 24X7 availability of power backup including dedicated UPS and emergency light	
ME DS.3	Critical areas of the facility ensures availability of oxygen, medical gases and vacuum supply	Availability of Centralized /local piped Oxygen and vacuum supply	2 Wailahla as nor son	OB	nal requirement of the patients.	
StandardD6 ME D6.1	The facility has provision of nutritional assessment of the patients		2	RR/SI	- Lancine of the patients.	
ME D6.2	The facility provides diets according to nutritional requirements of the patients	Check for the adequacy and frequency of diet as per	2		(1) Check diet is provided to all mothers (both inborn or outborn babies)	
Standard D7 ME D7.1	The facility has adequate sets of linen	nutritional requirement SNCU has facility to provide sufficient and clean linen for		OB/RR sures clean linen to the par OB/RR	(2) Check that all items fixed in diet menu is provided tients Check linen is clean, stains free & not torn.	
ME D7.1	The facility has established procedures for	each parent-attendant	2	OB/RR OB/RR	CIRCLA IIII III II CICAII, STAIRS FREE & ROT TOFF.	
ME D7.3	changing of linen in patient care areas The facility has standard procedures for handling, collection, transportation and washing of linen	Linen is changed every day and whenever it get soiled There is system to check the cleanliness and Quantity of	2	SI/RR	Quantity of linen is checked before sending it to laundry. Cleanliness & Quantity of linen is checked received from	
		the linen Check dedicated closed bin is kept for storage of dirty	2	OB	laundry. Records are maintained Check linen is kept closed bin & emptied regularly. Plastic bag	
Standard D11		linen		are determined as per gov	is used in dustbin & these bags are sealed before removed & handed over t. regulations and standards operating procedure	es.
ME D11.2	The facility has a established procedure for duty roster and deputation to different departments	There is procedure to ensure that staff is available on duty as per duty roster	2	RR/SI	(1) Check for system for recording time of reporting and relieving (Attendance register/ Biometrics etc) (2) Check FPC roster of nurses for providing training to Parent/ attendant	

					Т	
ME D11.3	The facility ensures the adherence to dress code as mandated by its administration / the health	Doctor, nursing staff and support staff adhere to their	2	ОВ	As per hospital administration or state policy. Check SNCU doctors and nurses follow the dress code	
Standard D12	department	respective dress code The facility has established procedu	ure for monitoring th		ervices and adheres to contractual obligations	
ME D12.1	There is established system for contract management for out sourced services	There is procedure to monitor the quality and adequacy	2	SI/RR	Verification of outsourced services (cleaning/ Dietary/Laundry/Security/Maintenance) provided are done	
		of outsourced services on regular basis	Area of Co	oncern - E Clinical Service	by designated in-house staff	
Standard E1 ME E1.1	The facility has established procedure for	The facility has de Unique identification number & patient demographic	fined procedures fo	r registration, consultation	on and admission of patients. Check for that patient UID & demographics like Name, age,	
	registration of patients	records are generated during process of registration & admission	2		Sex, Chief complaint, etc. are recorded	
ME E1.3	There is established procedure for admission of patients	Admission criteria for SNCU is defined & followed	2	SI/RR	Baby weight -1800 or more >4 Kg, gestation - <34 weeks, perinatal asphyxia, apnoea, refusal to feed, respiratory distress(Rate >60/min,severe jaundice, hypothermia <35.4 deg C & hyperthermia >37.5 deg C, central cyanosis, shock (CFT>3 sec)leeding, abdominal distension, diarrhoea & major malformation	
		There is no delay in admission of patient	2	SI/RR/OB	Time of admission is recorded in patient record, Admission is done by written order of a qualified doctor	
ME E1.4	There is established procedure for managing patients, in case beds are not available at the		2	OB/SI		
Standard E2	facility	Procedure to cope with surplus patient load The facility has defined and estal	olished procedures f	or clinical assessment, rea	assessment and treatment plan preparation.	
ME E2.1	There is established procedure for initial assessment of patients				Check availability & use of assessment criteria like triage of sick new born, Kramer's criteria for assessment of Jaundice,	
		Initial assessment of all admitted patient done as per standard protocols	2	RR/SI	Silverman Anderson Score for assessment of severity of respiratory distress and Ballard score for assessing gestation of new born etc.	
		Patient History, Physical Examination & Provisional Diagnosis is done and recorded	2	RR	Check bed head ticket	
		Initial assessment and treatment is provided immediately	2			
ME E2.2	There is established procedure for follow-up/ reassessment of Patients	There is fixed schedule for assessment of stable patients	2	RR/SI	Initial assessment is documented preferably within 2 hours There is fix schedule of reassessment as per protocols.	
	reassessment of Patients	& critical patients	-	RR/OB	Reassessment finding are recorded in BHT	
		There is system in place to identify and manage the changes in Patient's health status	2	SI/RR	Criteria is defined for identification, and management of high risk patients/ patient whose condition is deteriorating	
		Check the treatment or care plan is modified as per re assessment results	2	SI/RR	Check the re assessment sheets/ Case sheets modified treatment plan or care plan is documented	
	There is established procedure to plan and deliver appropriate treatment or care to	Check healthcare needs of all hospitalised patients are		siynn	Assessment includes physical assessment, history, details of existing disease condition (if any) for which regular	
ME E2.3	individual as per the needs to achieve best possible results	identified through assessment process	2	SI/RR	medication is taken as well as evaluate psychological ,cultural, social factors	
		Check treatment/care plan is prepared as per patient's need	2		(a) According to assessment and investigation findings (wherever applicable). (b) Check inputs are taken from patient or relevant care provider while preparing the care plan.	
			_	RR	Care plan include:, investigation to be conducted,	
		Check treatment / care plan is documented Check care is delivered by competent multidisciplinary	2	RR	intervention to be provided, goals to achieve, timeframe, patient education discharge plan etc Check care plan is prepared and delivered as per direction of	
		team	2	SI/RR	qualified ohysician of care of patient and referral	
Standard E3 ME E3.1	The facility has established procedure for	There is procedure of taking over of new born from	2	procedures for continuity	Check continuity of care is maintained while transferring/	
ME E3.2	continuity of care during interdepartmental transfer The facility provides appropriate referral linkages to	labour , OT/ Ward to SNCU Check pre referral stabilization is done	-	RR/SI SI/ RR/ OB	hand overing the patient (1) Check baby is stabilized w.r.t Temp. (skin to skin care-	
	the patients/Services for transfer to other/higher facilities to assure the continuity of care.	Circle per receipt administration of the	2	39 100 00	cover the baby Transport incubator), Oxygenation: Airway & breathing, perfusion (HR, CRT temp), Sugar. (2) Check 1st dose of antibiotics -inj Ampicillin & gentamicin is given. Also, Vit K is given if not administrated earlier	
		Patient referred with referral slip	2	RR/SI	(1) A referral slip/ Discharge card is provide to patient when referred to another health care facility. (2) Referral slip includes demographic details, Riskory of patient, examination findings, management done, drugs administered, any procedure done, reason for referral, (3) Detail of referral centre including whom to contact and signature of approxing medical of these proving medical of the signature of approxing medical of these proving medical of the signature of approxing medical of these proving medical of the proving medical of these proving medical of these proving medical of the proving medical of the proving medical of the provi	
		Reason for referral is clearly stated and referral is written by authorized competent person (Paediatrician or Medical Officer on duty)	2	RR/SI	(1) Verify with referral records that reasons for referral were clearly mentioned (2) SNCU staff confirms the suitability of referral with higher centres to ascertain that case can be managed at higher centre and will not require further referrals	
		Advance communication is done with higher centre &	2	SI/PI/SR	(1) Check SNCU staff facilitates arrangement of ambulance for transferring the patient to higher centre . (2) Patient attendant are not asked to arrange vehicle by their own (2) Check's SNCU staff checks ambulance preparedness in terms of necessary equipment, drugs, accompanying staff in terms of care that may be required in transit	
		Referral checklist & Referral in/ Out register is maintained for all referred cases		зугула	(1) Referral check list is filled before referral to ensure all necessary steps have been taken for safe referral (2) Check referral records has information regarding advance communication, transport arrangement,	
			2	SI/RR	accompanying care provider, reason for referral , time taken for referral etc. along with demographics, date & time of admission, date & time of referral, and follow up	
		There is a system of follow up of referred patients	2	SI/RR	 Check that SNCU staff take follow up of referred cases for timely arrival and appropriate care provided at higher centre. Outcome and deficiencies if any should be recorded in referral out register & analysed for improvement 	
ME E3.3		Facility has functional referral linkages to lower facilities	2	SI/RR	(1) Check for referral cards filled from lower facilities (2) CIW of nearby PHC/HWC is informed about discharge for follow ups	
Standard E4 ME E4.1	Procedure for identification of patients is	The fa		nd established procedures	for nursing care	
ME E4.1 ME E4.2	Procedure for identification of patients is established at the facility Procedure for ensuring timely and accurate nursing	before any clinical procedure	2	OB/SI RR	Identification tags are used for new-borns Check for treatment chart are updated and drugs given are	
	care as per treatment plan is established at the facility	Treatment chart are maintained	2		marked. Co relate it with drugs and doses prescribed.	
		There is a process to ensue the accuracy of verbal/telephonic orders	2	SI/RR	Verbal orders are rechecked before administration. Verbal orders are documented in the case sheet	
		Parent/ attendants are encouraged to provide basic care to the newborn	2	PI/SI	Breastfeeding, KMC, cleaning of baby can be undertaken by trained parent/attendant under the supervision of doctor/	
ME E4.3	There is established procedure of patient hand over, whenever staff duty change happens	Patient hand over is given during the change in the shift	2	SI/RR	Nursing Handover register is maintained	
	, , , , , , , , , , , , , , , , , , ,	Hand over is given bed side		SI/RR	(1) Handover is given during the shift change explaining the	
		-	2		condition, care provided and any specific care if required. (2) Check SBAR (situation, background, assessment and recommendation) protocols are followed	
ME E4.4 ME E4.5	Nursing records are maintained	Nursing notes are maintained adequately	2	RR/SI	Check for nursing note register. Notes are adequately written	
ME E4.5 Standard E5	There is procedure for periodic monitoring of patients	Vital are monitored for stable & critical patients and recorded periodically	2 lity has a procedure	RR/SI to identify high risk and v	Check for TPR chart, Phototherapy chart, any other vital required is monitored	
ME ES.1	The facility identifies vulnerable patients and ensure their safe care	Measures are taken to protect new born from any harm	2	OB/SI	Check the measure taken to prevent new born theft/swapping ,baby fall, baby charring, adverse drug	
ME ES.2	The facility identifies high risk patients and ensure	High risk patients are identified and treatment given on	2	OB/SI	events etc New born with emergency & priority signs assessed &	
Standard E6	their care, as per their need	priority		nale prescribing and use o	immediate treatment is given	

ME E6.1	The facility ensured that drugs are prescribed in generic name only	Check for BHT if drugs are prescribed under generic name only	2	RR	Check prescriptions are not written with brand name	
ME E6.2	There is procedure of rational use of drugs	Check for that relevant Standard treatment guideline are		RR		
		available at point of use	2		Essential newborn care, Newborn Resuscitation, management of hypothermia. LBW, Fluid management,	
					hypoglycaemia, neonatal jaundice, ETAT etc	
		Check staff is aware of the drug regime and doses as per STG	2	SI/RR	Check BHT that drugs are prescribed as per protocols and &Check for rational use of drugs	
ME E6.3		Complete medication history is documented for each	2	RR/OB	Check complete medication history including over-the-	
	and optimization	patient Medicine are reviewed and optimised as per individual	2	SI/RR	counter medicines is taken and documented Medicines are optimised as per individual treatment plan for	
		treatment plan	-	Synt	best possible clinical outcome	
					"1. Clinician/Nurse counsel the patient on medication safety using ""5 moments for medication safety app""	
					2. Nurse highlights the medications to be taken by the	
		Patients are engaged in their own care	2	PI/SI	patient at home and counsel the patient and family on drug intake as per treatment plan for discharge"	
					make as per readility pair for ascensige	
Standard E7		The	facility has defined	procedures for safe drug a	administration	
ME E7.1	There is process for identifying and cautious	High alert drugs available in department are identified	lucincy nus ucinicu	SI/OB	Electrolytes like Potassium chloride, Dopamine, dobutamine,	
	administration of high alert drugs (to check)		2		Hydrocortisone, Phenytoin, Phenobarbitone, Adrenergic agonist, Opioids, Anti thrombolytic agent etc. as applicable	
		Maximum dose of high alert drugs are defined and communicated	2	SI/RR	Value for maximum doses as per age, weight and diagnosis are available with nurses and doctor.	
ME E7.2	Medication orders are written legibly and	There is process to ensure that right doses of drugs are	2	SI/RR	A system of independent double check before administration. Error prone medical abbreviations are	
	adequately	only given			administration, Error prone medical abbreviations are avoided	
		Every Medical advice and procedure is accompanied with	2	RR	Verify case sheets of sample basis	
		date , time and signature Check for the writing, It comprehendible by the clinical	2	RR/SI	Verify case sheets of sample basis	
ME E7.3	There is a procedure to check drug before	staff Drugs are checked for expiry and other inconsistency	-	OB/SI	Check for any open single dose vial with leftover content	
IVIE E7.3	administration/ dispensing	before administration	2	OB/SI	intended to be used later on .In multi dose vials, needle is	
	· · ·	Any adverse drug reaction is recorded and reported		RR/SI	not left in the septum Check if adverse drug reaction form is available in SNCU and	
		· · · · · · · · · · · · · · · · · · ·	2		its reporting is in practice.	
ME E7.4	There is a system to ensure right medicine is given to right patient	Fluid, drug & dosages are calculated according to body weight	2	SI/RR	Check for calculation chart	
	to right patient	weight Drip rate and volume is calculated and monitored	2	SI/RR	Check the nursing staff how they calculate Infusion and	
		Check Nursing staff is aware 7 R's of Medication and	•	SI/OB	monitor it Administration of medicines done after ensuring right	
		Check Nursing staff is aware / R's of Medication and follows them	2	3,,00	patient, right drugs , right route, right time, Right dose , Right	
Standard E8		The facility has defined and actab	lished procedures f	or maintaining undating o	Reason and Right Documentation of patients' clinical records and their storage	
ME E8.1	All the assessments, re-assessment and	New born's progress is recorded as per defined	2	RR	Check BHT is updated following each reassessment	
	investigations are recorded and updated	assessment schedule	2			
ME E8.2	All treatment plan prescription/orders are recorded in the patient records.	Treatment plan are written on BHT and all drugs are written legibly in case sheet.		RR	(1) Check Medication order, treatment plan, lab investigation & nursing charts are recorded adequately	
			2		(2) Check change in treatment plan is also mentioned in case	
					new born's condition deteriorate	
ME E8.3	Care provided to each patient is recorded in the	Maintenance of treatment chart/treatment registers	2	RR	Treatment given is recorded in treatment chart	
ME E8.4	patient records Procedures performed are written on patients			RR	Resuscitation, blood transfusion, suctioning, phototherapy	
	records	Procedure performed are recorded in BHT	2		etc	
ME E8.5	Adequate form and formats are available at point of use			RR/OB	Availability of formats for neonatal case sheet, Treatment	
	oi use				Charts, TPR Chart , Intake Output Chart, Investigation sheet,	
			2		Community follow up card, BHT/ newborn case record , treatment continuation sheet. Discharge card, nomographs.	
					congenital anomaly if any. etc	
ME E8.6	Register/records are maintained as per guidelines	Standard Formats are available		RR	Check forms & formats are being used	
					General order book (GOB), report book, Admission register,	
			2		lab register, Admission sheet/ bed head ticket, discharge slip, referral slip, referral in/referral out register, Diet register,	
		Registers and records are maintained as per guidelines			Linen register, Drug indent register etc	
ME E8.7	The facility ensures safe and adequate storage and	All register/records are identified and numbered	2	RR OB	Check records are numbered and labelled legibly (1) Records of discharged cases are kept in MRD/	
INIC CO.	retrieval of medical records	Sale keeping or patient records		05	department sub store	
			2		(2) Check records are retrieval in case of re admission (3) Copy of records is given to next kin only with permission

	Staff is aware of clinical presentation of LBW	2	SI	Feeding problem, asphyxia, hypothermia, RDS, Apnoeic spells, Intraventricular haemorrhage, hypoglycaemia, hyperbilirubinemia, infection and retinopathy of prematurity	
	Staff is aware of management protocols of babies < 1800		SI/RR	(ROP) etc. Use of Overhead radiant warmer or incubator to keep baby	
	gm (34 weeks)	2		warm. Regular monitoring of axillary temp at least once every 6-8hrs . Planning the nutrition and fluids of babies considering type	
				of feeding, quantity , frequency and modality of feeding	
	Staff is aware of frequency & type of feeding to LBW	2	SI/RR	LBW babes should fed with mother's milk every 2 hrs. starting immediately after bith. Ensure LBW bables receive hind milk. Multi bortilet bream this should be given to pre term <22 weeks/1200 gm, who laft to gain weight despite of breastfeeding. Unstandeding. Unstandeding. Lag of the control of the control of the control of breastmilk is. 12 to 24 ml/kg/day given every 1-3 hours delivered intra gastric.	
	Check staff is aware of importance of hind milk	2	SI	Comes towards end of feed, rich in fat content and provide more energy. LBW babies with poor weight gain may fed with expressed hind milk.	
	Check guidelines for mode and quantity of providing fluids and feeds to babies is available & followed	2	SI/RR	Guidelines for modes requirements (i.e. Based on Birth weight in gm and age (weeks). Guidelines for fluid requirement of neonate (ml/kg/day) _ (based on Birth weight)	
	Check total daily requirement is estimated as per guidelines	2	SI/RR	Check quantity given is monitored & charted	
	Check staff skill for various techniques/modes of feeding to LBW	2	SURR	Techniques: Minimum entral feeds: Small volume of expressed breastimist, is 2.10 2d nilly (3dy given every 1.3 hours delivered intra gastric. Monnaturities usciding in permature or small bables - to develop sucking behaviour & improve digestion of feed Garage feeds: Using feeding cathertier - bushy inde with 10m syringe (without plunger) statehed toward outer end of tube & milk is allowed to stricted by grawly. The baby inde with the placed in left lateral position for 15-20min to avoid Xarda Spoon Feed Feeding with spoon or palledal, specially reconstens with gestation of 30-32 weeks or more are in position for sallow. That required amount of expressed breast milk in katori, place the baby in semi upright positive. Fift the spoon with milk, altitle short of firm, place at light positive. The short with milk, altitle short of firm, place at light positive. The baby will actively swallow the milk.	
	Check fluid and nutritional supplementation is fulfilled as per requirement	2	08/5	Falid requirement: First day of fluid requirement range from 60-80 m/lg. Dally increment: approx. 5ml/lpg ill 150ml/lpg is reached. Nortritional Supplementation. Vit 8: All LBW-C1000gm - receive G.5 mg lM of Vit 8 at birth 8 all other 1mg lM. All LBW who are exclusively breasted should review 40010 daly of vit 8 from first day of life to note tably start accepting full of the control of the co	
	Check the records to monitor intake & output to prevent				
	fluid overload	2	SI/RR	(1) IV-fluids are given are compared with prescribed volume & recorded in fluid monitoring chart every 2 hrb, (2) Measure blood glucose every 6 Fbrs and take action for low (c45mg/di) or high (150mg/di) blood glucose (3) Dally monitoring: or Weight, unit output, frequency of passage of urine, sign of overhydration.	
	Staff infusion site is inspected frequently	2	SI/KK	If there is redness and swelling seen at any time stop the infusion remove the cannula and establish new IV line in d/f	
	Check Growth is monitored in LBW babies	2	SI SI/RR	vein Babies checked for weight (daily), head circumference(weekly) and length (fort-nightly). Fenton's growth chart is used for pre term babies. WHO growth chart is used from corrected age of 40 weeks	
	Precautions are taken to protect LBW baby from hypothermia	2		Heat loss is minimized by kangaroo-care and a cap on the head and socks on the feet	
		2	SI/RR	Normal Axillary temp- 36.5 - 37.5 °C Cold Stress- 36.4 - 36°C Moderate Hypothermia- 35.9 - 32°C	
	Staff is aware of assessment & grading of hypothermia		SI/RR	Severe Hypothermia-<32°C. Assessment through Axillary temp., Skin temperature (using radiant warmer probe) and Human touch. BW prature habite: hypothermia sciences a Clifford.	
	Staff is aware of clinical conditions in which baby can exhibit signs of hypothermia	2	Si	LBW, preterm babies, hypoglycemia,sclerema, DIC and internal bleeding Hypothermic babies show signs of lethargy, irritability, poor feeding, tachypnoea/apnoea etc	
	Sulf & seare of management of mild hypothermia (temp <35.5-36.4°C)	2		(1) Frovice RMC to re-earn bely with mid hypothermia or warm the room using radiant heater or other heating devices if RMC is not possible. (2) Cover adequately & ensure to replace cold clothes with warm clothes (3) Keep room warm [26-28°C] & draught free (4) Continue breast edening (5) Monitor temp. 8. capillary filling time during re-earning, Watch for appose and hypoglycaemis (6) Monitor axillary temp every 1/2hr till it reaches 36.5 °C, then hourly for each 4 hrs, 2 hrly for 21 shreefalted 3 hrly chem bourly for each 4 hrs, 2 hrly for 21 shreefalted 3 hrly chem bourly for each 4 hrs, 2 hrly for 21 shreefalted 3 hrly chem bourly for each 4 hrs, 2 hrly for 21 shreefalted 3 hrly chem bourly for each 4 hrs, 2 hrly for 21 shreefalted 3 hrly chem 2 hreefalted 3 hre	
	Staff is sears of management of severe hypothermia (temp <35.5°C)	2	SI/RR	as routine Remove too's dothes from baby and replace with warm clothes. Remove too's dothes from baby and replace with warm clothes. Place under radiant warmer or one may use room heater or other means to warm baby monitor temp every 150 mim, monitor of pl. HR, temp & giscore as needed. Additional Start IV 100% destrose, if perfusion is poor, give 10m/lgg of ringer lactate or normal saline. Give Vit K -1mg IVM & provide oxygen & monitor SPO ₂ . Assess for sepsis	
	Staff is able to demonstrate the process of Kangaroo monther care Protocols	2	SJ/RR	Counsel the mother and take consent for initiating KMC. Give mother/care taker front open loose shirt or blouse Guide the mother/ care taker to sit in semi reclining position on thair or bed Unbutton top 2-3 buttons and sigh baby with only napkin, socks and cap on, into shirt Ensure six into skin contact I/W abby and care taker Baby should be in froig like position with head turned to one side and placed between mother's breast The a string at bett level to prevent the baby from slipping down Cover mother and baby dyad with woollen or sheet factouring in frequent breast feeding	

		Staff is able to access the clinical definition and	2		Blood glucose level less than 45mg/dl in all new-borns Symptoms of hypoglycaemia: (1) alteriness, irrababily (2) ethat gy, impress (3) Weak or high pitched cry (4) Poor feeding, vomting	
		symptoms of hypoglycaemia is new-borns		Si	(5) Tachycardia (>180/min) (6) Sweating (7) Hypothermia (8) Poor respiratory effort or apnoea, tachypnoea (9) Cyanosis (10) Seizures or coma	
		Staff is skilled for technique of estimating blood sugar using regent strips in neonates	2		Common site-Heel. Il Ensure heels in not cold. Heel can be warmed by holding it in hand for few minutes. 2) Pepare the site with 70% isopropyl alcohol. Allow to dry. 3) Make needle sitck purcture of posterolateral aspect of heel & awoid making deep purcture. (4) Follow instructions on reagent strip bottle for obtaining blood sample analysis. (5) if blood glucose is low send blood sample to lab for confirmation.	
		Staff is competent in management of hypoglycaemia	2	SI SI	(1)Establish IV line, influse bolus of 2m/l/kg body weight of 10/l/k destrose over 1min. (2) If and IV line can to be established quickly, give 2m/l/kg body weight of 10/k destrose origastric tube (3) Start Influsion of destrose containing limit at daily maintenance volume acc. to bally 3 age to a to provide a gazcose influsion stac ((6)) of 6mg/kg min and ceased in steps of 2 mg/kg/min to max of 12mg/kg/min part of 10 mg/kg/min to max of 12mg/kg/min to 12mg/kg/min to max of 12mg	
				SI/RR	hrly, (G) If blood glucose is less than 25mg/dl, repeat the bolus of dextrose and Glik as needed. (J) if the blood glucose b/w 25-45mg/dl, do not give dextrose bolus but increase Glik. The upper conc. of dextrose sol. which can be influed safely through peripheral vein is 15%. Conc. higher than this necessitate central line placement &	
		Staff is aware of frequency of blood glucose measurement after blood glucose return to normal Charts/guidelines are readily available & followed in	2	SI/RR	(1) Every 8 hrs as long as baby require IV fluid. If the baby is no longer required or is not receiving IV fluid, measure blood glucose every 12 hrs for 24 hrs Infusion rates with birth weight more than or equal to	
		SNCU for estimating glucose infusion rates in neonates	2	SI/RR	Infosom using Mixture of D10 & D25. Infuse ion rates with birth weight less than 1500 gm using mixture of D10 & D25	
		Discharge & follow up protocols are followed LBW bables	2		[1] Consistently demonstrate weight again for 3 consecutive days (2) Mother should be confident in feeding the neonate (3) The required nutritional supplements started (4)BCG, Nep. 8 and OPV is given to baby (5) Methods of temperature regulation via: LMC and other skills are taught to mother and adequately practices in hospital	
		Check important information like ROP screening and	2	SI/RR	(6) Mother/parents are available to identify danger sign LBW (32 weeks/<1500gm) are advised for ROP screening at 1 month of postnatal age and hearing evaluation at 40 weeks	
ME E20.4	Management of neonatal asphyxia is done as per	hearing evaluation is given to parents/mother of LBW babies Staff is aware of clinical presentation of asphyxia	-	SI/RR	corrected gestational age Asphyxiated babies evolve neurological manifestation viz	
	guidelines		2	Si	seizure, hypotonia, come or Hypoxic ischemic encephalogathy (Ibli) within 27 ars of life Evidence of multi organ system dysfunction (manifested as difficult breathing or renal failure or feeding intolerance or hepatic dysfunction or haematological abnormalities) in immediate neonatal period	
		Grading of hypoxic ischaemic encephalopathy (HIE) is done & recorded on case sheet	2	SI/RR	Using Levene's grading HIE - assessment of consciousness, tone, seizure activities and autonomic disturbances like sucking & resignation - Severity & decided. Check sequential grading is done every 8-12 hrs to assess the progression of HIE	
		Initial stabilization & management of asphysia cases is done as per protocols	2	SI/RR	(I) Maintenance of temperature (keep the baby under radiant warmer & temps is maintained and cornoral range) perfusion, ventilation (monitoring of oxygen saturation-SOC maintained by wio 94-95) and noral het pabloc state including glucces, calcium and said base balance (IV fluids, enteral Redenig, glucces, calcium and said base balance (IV fluids, enteral Redenig, glucces enonthioring, management of hypocalcaema & administration of vis K. Img (M) [2 larly detection in management of continuous transmission of the continuous transmission of cerebral injury	
		Clinical monitoring or bed side tests of asphyviated babies is performed	2	SI/RR	(1) Levene's staging for neurological status (2) Downe's Score for respiratory status (3) Cardiovascular status-1e. heart rate, colour, CRT, peripheral pulser, non-investue BP (4) Abdominal circumference-to rule out fleus (5) Urine output: to check for serum electrolytes, blood urea & serum creatinine (8) Monitorina of Blood sureare.	
		Clinical monitoring is performed & updated in case sheet at defined intervals	2	SI/RR	(1) Levene's staging - every 8hrs (2) Downe's Score - every 2-3 hrs (3) Cardiovascular status - i.e. heart rate, colour, CRT, peripheral publics, non-investive BP (4) Abdominal circumferences- to rule out iteus (5) Urine output: - measured daily - should not be <1ml/lag/hr (6) Monitoring of Blood surger every 6-8hrs during the first 24 hrs	
		Staff is aware of two major clinical manifestation results due to asphyxia	2	SI	(1) Neonatal Shock (2) Neonatal Seizures	
		Staff is skilled to identify shock Staff is aware of technique to check CRT & its interpretation	2	SI SI/RR	(1) Unexplained Tachysardia- (RE-160/min) [2] Capillary refliam (CRT)- 32 seconds Gentle pressure is applied by the tip of finger on central part of the body such as chest for 3-5 seconds by slowly counting from 1 to 5. this result in to blanching and area refill & it become pink after the tip of finger is filted. Normal CRP is <3 sec. A prolonged CRT indicates poor circulation and tissue perfusion.	
		Staff is skilled to manage neonatal shock	2	SI/RR	[1] Supportive Care : (a) Maintain TBAC. (b) Hypoxia: Maintain SPO2-90-94% (c) Hypoxia: Maintain srornal blood glucose- (>45 (c) Fig. (c)	
		Staff is competent to assess improvement	2	SI/RR	Check: (1) improvement in CRT (2) Decrease in heart rate by at least 10 beats/min. (3) improvement in pulse volume and an increase in urine output over next 4-6 hrs (is sign of improvement)	
		Staff is competent to identify when to start vasopressors	2	SI/RR	If signs for poor perfusion persists despite 2 fluid boluses- Start vasopressor along with supportive care. Most commonly used vasopressor in neonates is dopamine	
		Staff is aware of dose of dopamine	2	SI/RR	(1) Starting dose- 5-10 microgram/kg/min (2) If no improvement occurs- the dose can be increased by increments of 5 microgram/kg/min every 20-30 min to max of 20microgram/kg/min	

		Staff is aware of next line of treatment if shock persists after max dose of dopamine	2	SI/RR	Dobutamine - Dose same as dopamine Hydrocortisone - Img/kg of hydrocortisone can be given as initial dose and then depending upon response , it can be given 8-12 hrly in dose of 1 mg/kg/dose for 2-3 days	
		Staff is aware of further line of treatment in case baby is unresponsive to shock	2	SI/RR	(1) Consider blood transfusion if Hb< 12gm% (2) Consider referral after stabilization of temperature, oxygenation and blood glucose	
		Staff is aware of therapeutic end points for babies suffering from neonatal shock	2	SI/RR	CRT <3 sec, Normal Heart rate, normal pulse, warm extremities, normal BP and urine output >1ml/kg/hr	
		Staff is competent in method of weaning from inotropes	2	SI/RR	Once hypotension improves (BP normal for 4-6hrs) & tissue perfusion improves, inotropes should be tapered slowly @5microgm/kg/min every 1-2 hrly provided neonate maintain the list of therapeutic end point	
		Staff is aware of causes of neonatal Seizures	2	SI	Asphyxia (Most common), birth injuries, meningitis, intracranial bleeding or due to metabolic problems like hypoglycaemia, hypocalcaemia, and hypo or hypernatremia	
		Staff knows d/f in spasm due to tetanus and jitteriness	2	SI	Spasm due to tetamus: Appear after 48hrs, involuntary contraction of muscles, fists of ten persistently and sightly contraction of muscles, fists of ten persistently and sightly clenched. Firsms opisithenous, signed by touch, light 4 sound and 8aby is conscious throughout, often crying with pain. Riteriness: Provoke by stimulus, abolished by verstraining, Not associated with autonomic changes, examination of menantal is normal by seiture episocies & EEG is normal	
		Staff is aware of diagnostic approach for seizure	2	SI	In sick babies: blood glucose, serum ionized calcium, serum sodium & Sepsis screen. Detailed history is taken and examination is done after initial acute management to determine the underlying cause.	
		Suff is skilled to provide treatment of neonate with sectures	2	SI/RR	1st Step: Resuscitate if needed : in thermoneutral environment ensure TABC. Start oragen if required IV access the result of the start oragen if required IV access the start oragen if required IV access the start oragen in the start of the start oragen in the start	
		Suff is warre of 1st and 2nd line ACD along with their dooses	2	SI/RR	1st Line ACD: Inj Phenobarbitione-20mg/kg IV over 20min. If bushy has no further seatures don to start maintenance. If setures persists after initial phenobarbitione infusion, administer boluses of smg/kg put total of mg/kg. 2nd Line ACD: Inj Phenytoin or Fosphenytoin 20mg/kg/V over 20 min if setures are not controlled with if Phenobarbitione. Assess setures control after the Intusion. If setures persists then correspond 20mg/kg/V over 20 min if setures are not controlled with infusion. If setures persists then correspond 20mg/kg/V mys be infused. Once the setures are controlled, start maintenance done of 3-4mg/kg by after 21 hrs of loading dose of phenobarbitione and phenytoin	
		Suff is aware of therapeutic action for neonate with seitures	2	SI/RR	(a) Transent metabolic problem in. Psypolycaemia, hypocalaemia, dyselectrolyfemia. Treat the cause, 1609 ACD immediately if started (2). Glestures controlled with 1st bobs of phenobarbitone- No maintenance ACD, observe for 48 hrs if seizures re occur (3) Estures controlled with multiple does of phenobarbitone. Start maintenance does phenobarbitone. Stop once seizure free for 48 hrs. Goldinate of the control seizures- Stop Phenytion if seizures (4) Difficult to control seizures- Stop Phenytion if seizures free for 48 hrs. continue maintenance does phenobarbitione, Assess neurological status: if normal-Stop phenobarbitione, if abnormal- may continue or all maintenance phenobarbitone.	
		Staff is competent to identify conditions when to refer the neonatal asphysia cases to higher centre	2	SI/RR	(1) when haby need respiratory support - as PPV required for Smin or longer (2) Onsect of setures within 12 hrs-refractory seizures (uncontrolled with phenotarbitone & phenytobin (3) Severe Hill & unable to restor or all feeds within 1 week- (4) Shock unresponsive to vasopressor	
		Post discharge & follow up advice is given as per protocols	2	SI/RR	To attend follow up clinic for monitoring of their growth & development and to identify post asphyxia sequelae and development delays	
ME E 20.5	Management of sepsis is done as per guidelines	Staff is aware of classification of neonatal sepsis	2	SI	Early orset sepsis (EOS): where sign & symptoms of sepsis appear within 72 hrs of birth due to pathogens in maternal genital tract or delavery area, respiration diverse due to congenital pneumonia. Late onset of Sepsis (LOS): where sign appear after 72 hrs of age due to pathogens from hospital or community. LO is commonly presented as Septicaemia, pneumonia, or meninelitis.	
		Staff it aware of signs of neonatal sepsis	2	SI	[11 Clinical picture is highly variable. Sign & symptom are minimal, subtle or non specific. [2] Clinical manifestation of neonatal sepsis: Lethargy, refuse to suckle, poor or yeth piliphtiched or oversible or non-thing the programme of the pro	
		Staff is competent to identify clinical manifestation of meningitis	2	SI	fever, seizures, blank look, high pitched cry to excessive crying/irritability, neck retraction & bulging fontanel	
		Laboratory investigations are performed to confirm neonatal sepsis	2	SI/RR	Direct method: Isolation of micro-organism from blood, CSF, urine or pus. Indirect method: Leukopenia (TLC > 5000/cu mm), Neutropenia (ANC < 1800/cu mm), Immature neutrophil to total neutrophil radio (O-QJ). Merc OSFS/Serm 1st honi up pastive C Protein. Any of the 2 or more test come positive indicate sepsis. Lumber puncture: must be performed in all cases with late onset of sepsis.	
		Supportive care is provided to manage new borns	2	SI/RR	Maintain TABC Ensure SPO, 90-94% Maintain normoghycemia Administer inj vit K. Img IV, if there is active bleeding from any site Avoid enteral feed if hemodynamically compromised & start feed as hemodynamically stable. Consider exchange transfusion if there is sclerema	
		Appropriate antibiotics are given according to age and weight of the baby	2	SI/ RR	Correct dose and frequency is given as per antibiotic therapy of neontal sepsis. Antibiotic therapy should cover the common bacteria viz, E coil, Staphylococcus aureus and Kebsiela Pneumonia Every new born unit must have its one antibiotic policy based on profile of pathogen & local sensitivity pattern	
		Staff administer antibiotic as per protocols for confirmed Sepsis	2	SI/RR	1. Give Injection ampicillin and gentamicin, as first line of treatment. 2. Give cloxocillin (if available) instead of ampicillin, if there are entensive skin pustules or abbossese, as these might be signs of Staphylococcus infection. 3. Antibiotics should be given slowly, after dissolving in 5-10 mil fluid using a microdrip set or influsion pump. 4. Never mix two antibiotics in same syringe.	

		Check algorithm & treatment charts for management of neonatal sepsis is available & practices	2	SI/RR	Antibiotic schedule & dosage including frequency, route and duration is available & used

WIE BS.4	treatment to Below poverty line patients without administrative hassles	Surgical services are free for BPL patients	2	PI/SI/RR			
			Area	of Concern - C	Inputs		
Standard C1			r delivery of assu	red services, and	available infrastructure meets the prevalent norms		
ME C1.1	Departments have adequate space as per patient or work load	Adequate space for accommodating surgical load	2	ОВ			
		Availability of OT for elective major surgeries	2	ОВ	100-200 -1OT, 200-300-2, 300-400 -3		
		Availability of OT for Emergency surgeries Availability of OT ophthalmic/ENT	2 2	OB OB	Emergency OT 1 Ophthalmic/ENT- 1		
		Waiting area for attendants	2	OB	Optioning Civi- 1		
ME C1.2	Patient amenities are provide as per patient load	Functional toilets with running water and flush are available	2	ОВ	In the OT waiting area for patient relatives/ in the vicinity of OT		
		Availability of drinking water Availability of seating arrangement	2	OB OB	Check for availability of Hot water facility		
ME C1.3	Departments have layout and	Availability of seating arrangement Demarcated of Protective Zone	2	OB			
	demarcated areas as per functions	Demarcated Clean Zone	2	ОВ			
		Demarcated sterile Zone Demarcated disposal Zone	2	OB OB			
		Availability of Changing Rooms	2	OB			
		Availability of Pre & post Operative Room Availability of Scrub Area	2	OB OB			
		Availability of Autoclave room/ TSSU	2 2	OB OB			
		Availability of dirty utility area Availability of store	2	OB			
ME C1.4	The facility has adequate circulation area and open spaces according to need	Corridors are wide enough for movement of	2	ОВ	2-3 meters		
	and local law The facility has infrastructure for						
ME C1.5	intramural and extramural	Availability of functional telephone and Intercom Services	2	ОВ			
	communication				Hydraulic OT Tables		
ME C1.6	Service counters are available as per patient load	OT tables are available as per load	2	ОВ	As per case load at least two for 100 - 200 bedded DH and 4 for More than 200 beds		
	The facility and departments are						
ME C1.7	planned to ensure structure follows the function/processes (Structure	Unidirectional flow of goods and services	2	ОВ	No cris cross of infectious and sterile goods		
	commensurate with the function of the						
Standard C2	hospital)	The	facility ensures	the physical safety	of the infrastructure.		
ME C2.1	The facility ensures the seismic safety	Non structural components are properly secured	2	ОВ	Check for fixtures and furniture like cupboards, cabinets, and heavy equipment , hanging objects are properly fastened and		
	of the infrastructure				secured		
ME C2.3	The facility ensures safety of electrical establishment	OT does not have temporary connections and loosely hanging wires	2	ОВ			
		Adequate electrical socket provided for safe and smooth operation of equipment	2	ОВ	Power boards are marked as per phase to which it belongs		
		Availability of three phase electricity supply	2	ОВ			
	•						

		OT has mechanism for periodical check / test of all electrical installation by competent electrical	2	ОВ		
		Engineer				
		Wall mounted digital display is available in OT to show earth to neutral voltage	2	ОВ		
		Quality output of voltage stabilizer is displayed in	2	ОВ		
		each stabilizer as per manufacturer guideline	2	05		
ME C2.4	Physical condition of buildings are safe for providing patient care	Floors of the ward are non slippery and even	2	ОВ		
	for providing patient care	Walls and floor of the OT covered with joint less	2	ОВ		
		tiles Windows/ ventilators if any in the OT are intact		-		
		and sealed	2	ОВ		
Standard C3			y has established	Programme for fi	ire safety and other disaster	
ME C3.1	The facility has plan for prevention of fire	OT has sufficient fire exit to permit safe escape to its occupant at time of fire	2	OB/SI		
		Check the fire exits are clearly visible and routes to reach exit are clearly marked.	2	ОВ		
ME C3.2	The facility has adequate fire fighting	OT room has installed fire Extinguisher that is	2	ОВ		
WIE CS.2	Equipment	Class A , Class B, C type or ABC type	2	OB		
		Check the expiry date for fire extinguishers are displayed on each extinguisher as well as due	2	OB/RR		
		date for next refilling is clearly mentioned	2	OB/RR		
	The facility has a system of periodic
